WASHINGTON : 2005

COMMITTEE ON ARMED SERVICES

(109th Congress, 1st Session)

JOHN WARNER, Virginia, *Chairman*

JOHN McCAIN, Arizona	CARL LEVIN, Michigan
JAMES M. INHOFE, Oklahoma	EDWARD M. KENNEDY, Massachusetts
PAT ROBERTS, Kansas	ROBERT C. BYRD, West Virginia
JEFF SESSIONS, Alabama	JOSEPH I. LIEBERMAN, Connecticut
SUSAN M. COLLINS, Maine	JACK REED, Rhode Island
JOHN ENSIGN, Nevada	DANIEL K. AKAKA, Hawaii
JAMES M. TALENT, Missouri	BILL NELSON, Florida
SAXBY CHAMBLISS, Georgia	E. BENJAMIN NELSON, Nebraska
LINDSEY O. GRAHAM, South Carolina	MARK DAYTON, Minnesota
ELIZABETH DOLE, North Carolina	EVAN BAYH, Indiana
JOHN CORNYN, Texas	HILLARY RODHAM CLINTON, New York
JOHN THUNE, South Dakota	

JUDITH A. ANSLEY, *Staff Director*

RICHARD D. DEBOBES, *Democratic Staff Director*

CONTENTS

Purpose of the Bill	Page 1
Committee overview and recommendations	2
Explanation of funding summary	8
Division A—Department of Defense Authorizations	17
Title I—Procurement	17
Subtitle A—Authorization of Appropriations	17
Explanation of tables	17
Subtitle B—Army Programs	19
Multiyear procurement authority for AH–64D Apache attack heli- copter block II conversions (sec. 111)	38
Multiyear procurement authority for modernized target acquisition designation/pilot night vision sensors for AH–64D Apache attack helicopters (sec. 112)	38
Multiyear procurement authority for utility helicopters (sec. 113)	38
Missile Procurement, Army	39
Advanced precision kill weapon system	39
Weapons and Tracked Vehicles	39
Lightweight 155 millimeter Howitzer	39
Army Ammunition	39
M1028 120mm tank cartridge	39
Modern demolition initiator	39
Rapid wall breaching kit	40
Ammunition peculiar equipment outloading modules	40
Provision of industrial facilities	40
Conventional ammunition demilitarization	40
Other Procurement, Army	41
Movement tracking system	41
Night vision devices	42
Modular causeway system	42
Subtitle C—Navy Programs	42
Prohibition on acquisition of next generation destroyer (DD(X)) through a single naval shipyard (sec. 121)	66
Split funding authorization for CVN–78 aircraft carrier (sec. 122)	66
LHA replacement (LHA(R)) ship (sec. 123)	67
Refueling and complex overhaul of the USS “Carl Vinson” (sec. 124) ..	67
Navy Aircraft	68
C–40A procurement	68
Advanced targeting pods	68
Night targeting system upgrade	68
H–53 modifications	68
SH–60 armed helicopter	69
EP–3 aircraft electronic attack	69
P–3 aircraft modifications	69
Navy Weapons	70
AIM–9X captive air training missile	70
Weapons industrial facilities	70
Gun mount modifications	70
Navy and Marine Corps Ammunition	70
M795 155mm high explosive cartridge	70
Time fuze blasting igniter	70
Shipbuilding	71
DD(X) destroyer program	71
DDG–51 Arleigh Burke-class destroyer modernization program	71
Other Procurement, Navy	72

Title I—Procurement—Continued	
Other Procurement, Navy—Continued	
High performance metal fiber brushes for shipboard motors and gen- erators	72
Items less than 5.0 million	72
Littoral combat ship mission modules	72
Submarine acoustic modernization installation	73
Surface sonar dome window	73
Surface electronic warfare improvement program	73
Weapons range support equipment	73
Maritime domain awareness	73
Rolling airframe missile launcher system	74
NULKA anti-ship missile decoy	74
Submarine training device modifications	74
Command support equipment	74
Navy medical automated information technology insertion	75
Marine Corps Procurement	75
Modification kits	75
Rapid deploying interoperable shelter systems	75
United States Marine Corps continuity of operations	76
Subtitle D—Air Force Programs	76
Multiyear procurement authority for C-17 aircraft (sec. 131)	91
Prohibition on retirement of KC-135E aircraft (sec. 132)	91
Use of Tanker Replacement Transfer Fund for modernization of aer- ial refueling tankers (sec. 133)	91
Prohibition on retirement of F-117 aircraft (sec. 134)	92
Prohibition on retirement of C-130E/H tactical airlift aircraft (sec. 135)	92
Procurement of C-130J/KC-130J aircraft after fiscal year 2005 (sec. 136)	92
Aircraft for performance of aeromedical evacuations (sec. 137)	93
Air Force Aircraft	93
F-15E procurement	93
C-130J/KC-130 multiyear procurement restoration	94
B-1 digital communication improvements	94
C-5 aircraft avionics modernization program	95
C-130E/H aircraft modifications	95
KC-135 global air traffic management	95
E-8C joint surveillance and target attack radar system reengining	95
Advanced targeting pods	96
Air Force Missiles	96
Minuteman III mods for propulsion replacement program	96
Other Air Force Procurement	96
Halvorsen loader	96
Distributed common ground system components	97
Joint threat emitters	97
Subtitle E—Other Matters	97
Advanced SEAL Delivery System (sec. 151)	104
Defense-wide Programs	105
MH-47 infrared engine exhaust suppressor	105
Time delayed firing device/sympathetic detonators	106
Multi-band inter/intra team radio	106
Multi-band multi-mission radio	106
Joint threat warning system	107
Rucksack portable unmanned aerial vehicle	107
Military mail screening equipment	107
Automatic Chemical Agent Detector and Alarm	108
Items of Special Interest	108
Army multi-band inter/intra team radio system	108
Cooperative engagement capability	108
F/A-22 aircraft	109
Intra-theater airlift	109
Littoral combat ship	110
Maritime prepositioning force, future	110
Transmission enterprise program	111
Title II—Research, Development, Test, and Evaluation	113
Explanation of tables	113

	Page
Title II—Research, Development, Test, and Evaluation—Continued	
Subtitle A—Authorization of Appropriations	115
Science and Technology	115
Subtitle B—Program Requirements, Restrictions, and Limitations	116
Contract for the procurement of Future Combat System (sec. 211)	116
Joint field experiment on stability and support operations (sec. 212) ..	116
Subtitle C—Ballistic Missile Defense	117
One-year extension of Comptroller General assessments of ballistic missile defense programs (sec. 221)	117
Fielding of Ballistic Missile Defense Capabilities (sec. 222)	117
Plans for test and evaluation of operational capability of the ballistic missile defense system (sec. 223)	118
Subtitle D—High-Performance Defense Manufacturing Technology Research and Development	118
High performance defense manufacturing technology research and development (sec. 230)	118
Subtitle E—Other Matters	119
Expansion of eligibility for leadership of Department of Defense Test Resource Management Center (sec. 241)	119
Technology transition (sec. 242)	119
Prevention, mitigation, and treatment of blast injuries (sec. 243)	120
Additional Matters of Interest	121
Army	121
Army basic research	135
Document exploitation	135
Army university research	135
Advanced mine detection and blast mitigation	136
Army small airship	136
Detection and neutralization of improved explosive devices	136
Real-time laser threat warning development	137
Army unmanned systems initiative	137
Technology enhancement for area protection	137
Multifunctional robot platform	137
Combat vehicle and automotive technology	137
Gun barrel coatings	138
Active coatings technology	138
Sonic rarefaction wave gun technology	138
Ultra wide band sensors	138
Army man-portable power	139
Flexible Display Initiative	139
Ultra wideband chipset	139
Biosecurity research for food safety	140
Army medicine for mitigation and treatment of blast injuries	140
Bio-defense detection and treatment	141
Posttraumatic stress disorder diagnostic tools	141
Surgical safety system	142
Human operator performance research	142
Wireless and digital medical improvements	142
Reconfigurable tooling systems	142
Rotorcraft system monitoring	142
Unmanned tactical combat vehicles	143
Midrange Munition	143
Nanotechnology manufacturing	143
Abrams track improvement	143
Combat vehicle advanced development	144
Coordinated training	144
Advanced simulated training	144
Explosive demilitarization	144
Alternative fuel supplies	145
Stryker vehicle active protection system demonstration	145
Advanced structures and composites	145
Army command and control visualization system	146
Interactive modeling and simulation management	146
Next generation interceptor materials	146
Long loiter sensor and communications platform	146
Architecture Analysis Program	147
Single Integrated Space Picture	147

VI

	Page
Title II—Research, Development, Test, and Evaluation—Continued	
Additional Matters of Interest—Continued	
Army—Continued	
Casting Emission Reduction Program	147
Advanced Army medical systems	148
Joint tactical radio system	148
Tactical vehicle modifications	149
Future tactical truck system	149
Protected simulation and test link	150
Unmanned aerial vehicle ice protection	150
High performance computing research	150
Retinal/iris multimodal biometrics technology for secure identification	150
Army manufacturing technologies	151
Navy	151
Navy university research	163
Navy science and technology outreach	163
Free electron laser	163
Littoral and undersea security	164
Nanomagnetic materials	164
Polymeric aircraft components	164
Small watercraft propulsion demonstrator	164
Advanced combat headborne system	164
Critical area protection systems	165
SensorNet	165
Space research	165
Automated video threat recognition	165
Multifunctional composite structures	165
Portable water bio-defense	166
Seabasing research	166
Gallium nitride radio frequency power	166
Integrated littoral sensor network	166
Coordination and integration of unmanned system teams	166
Information sharing for intelligence, surveillance and reconnaissance	167
Force protection advanced technology	167
Improved shipboard combat information center	168
Warfighter sustainment advanced technology	168
Navy persistent surveillance	169
Armored patrol vehicle	169
Laser integrated target engagement system	169
Water purification system	169
Modeling and simulation for urban operations	170
Surface Navy integrated undersea tactical technology	170
Shipboard system component development	170
Improved surface vessel torpedo launcher	171
Guided missile submarine conversion	171
Advanced submarine system development	171
Regenerative filtration technology	172
Marine Corps ground and supporting arms systems	172
Marine mammal detection and mitigation	174
Navy logistics common operating picture	174
Automatic radar periscope detection and discrimination	174
DD(X) destroyer integrated propulsion system	174
Affordable towed array construction	175
New Design SSN	175
Submarine tactical warfare system	175
Autonomous unmanned surface vessel	176
NULKA anti-ship missile decoy development	176
Navy medical research	176
Shared Reconnaissance Pod logistics support	177
Marine Corps communications systems	177
Marine Corps ground combat and supporting arms systems	178
Battlefield management system	178
RQ-8B Firescout vertical takeoff and landing unmanned aerial vehicle	179
Distributed common ground system—Navy	179
National shipbuilding research program—advanced shipbuilding enterprise	179

VII

Title II—Research, Development, Test, and Evaluation—Continued Additional Matters of Interest—Continued

	Page
Air Force	180
Air Force basic science	194
Secure, assured information sharing	194
Blast resistant barriers	194
Air Force materials research	194
Nano-technologies for chemical and biological defense	195
Hypersonics engine research and integration	195
Space technology	195
Adaptive optics research	196
Integrated spacecraft engineering tool	196
Laser eye protection	196
Metals affordability initiative	197
Aerospace propulsion and power technologies	197
Versatile affordable advanced turbine engines	197
Ballistic missile technology	197
AC coupled interconnect	198
Energy cells for defense and intelligence applications	198
Radically Segmented launch vehicle	198
Thin film amorphous solar arrays	198

Title II—Research, Development, Test, and Evaluation—Continued	
Additional Matters of Interest—Continued	
Defense-wide—Continued	
Voice activated handheld translator	228
Aegis ballistic missile defense	228
Ground-based midcourse ballistic missile defense	229
Miniaturized carbon monoxide oxidation technology	229
Airborne Infrared System	230
Kinetic Energy Interceptor	230
Military mail screening system development and demonstration ..	231
UAV systems and operations validation program	231
Foreign supplier assessment center	231
Operationally responsive space payloads	231
Industrial preparedness	232
Special operations wireless management and control project	232
Maritime unmanned aerial vehicle sensor	233
Lightweight portable solar panels	233
Items of Special Interest	233
Canopy hard-coats	233
CH-53X helicopter development	234
Construction of Navy Research Vessels	234
Department of Defense computer science research	235
Unmanned aerial vehicles for resupply missions	235
Title III—Operation and Maintenance	237
Explanation of tables	237
Subtitle A—Authorization of Appropriations	275
Subtitle B—Environmental Provisions	275
Elimination and simplification of certain items required in the annual report on environmental quality programs and other environmental activities (sec. 311)	275
Payment of certain private cleanup costs in connection with the Defense Environmental Restoration Program (sec. 312)	275
Subtitle C—Other Matters	276
Aircraft carriers (sec. 321)	276
Limitation on transition of funding for east coast shipyards from funding through Navy working capital fund to direct funding (sec. 322)	277
Use of funds from National Defense Sealift Fund to exercise purchase options on maritime prepositioning ship vessels (sec. 323)	277
Purchase and destruction of weapons overseas (sec. 324)	278
Increase in maximum contract amount for procurement of supplies and services from exchange stores outside the United States (sec. 325)	278
Extension of authority to provide logistics support and services for weapon systems contractors (sec. 326)	278
Army training strategy (sec. 327)	279
Limitations on financial management improvement and audit initiatives within the Department of Defense (sec. 328)	279
Study on use of ethanol fuel (sec. 329)	280
Budget Items	281
Other Defense Programs	281
Enhanced vision	281
Assembled Chemical Weapons Alternatives Program	281
Army	282
Advanced combat helmet with modular integrated communications headset	282
Army training	283
Corrosion prevention and control	284
Facility sustainment, restoration, and modernization for the Army	285
Quadruple specialty containers	285
Department of Defense foreign language training	285
Army civilian intern program	286
Unattended ground sensors	286
Information assurance vulnerability alert cell	286
Aviation and missile life cycle management pilot program	286
Army excess carryover	287
Audits of Department of Defense financial statements	287

Title III—Operation and Maintenance—Continued	
Budget Items—Continued	
Army—Continued	
Civilian personnel pay in excess of requirements	288
Defense Information System Network	288
Working capital funds	288
Navy	289
NULKA decoy cartridge	289
Stainless steel sanitary spaces	289
Manufacturing Technical Assistance and Production Program	289
Electric start system	290
Marine gas turbine photonic sensors	290
Mark-45 gun system overhauls	290
Facility sustainment, restoration, and modernization for the Navy	290
Marine Corps	291
Acclimate high performance undergarments	291
Combat casualty care equipment upgrades	291
Family of mountain cold weather clothing and equipment	291
Portable tent lighting	291
Ultra-light Camouflage Net System	291
Supplemental communications and electrical utility support to U.S. Marine Corps Network Operations Center	292
Air Force	292
Bomber deployable phase maintenance kits	292
Robust Nuclear Earth Penetrator	292
Joint protection enterprise network	292
Joint task force north	293
Mobile consolidated command center	293
Mobility Air Force depot maintenance	293
Homeland Security/Homeland Defense Education Consortium	294
Defense-Wide	295
Counseling and assistance to military families	295
Increased support for child care for military families	295
Funding for Office of Economic Adjustment	296
Capital Security Cost Sharing	296
Information assurance scholarship program	296
Increased funding for conservation buffer zones	297
Citizen-Soldier Support Program	297
Parents as Teachers	298
Military to civilian conversions	298
Army Reserve	299
Army Reserve components cold weather clothing	299
Air Force Reserve	299
Air Force Reserve mobility Air Force depot maintenance	299
Army National Guard	299
Communicator Automated Emergency Notification System	299
Virtual battlefield system one	299
Chemical, Biological, Radiological, Nuclear and High Yield Explosive Enhanced Response Force Package Teams	300
Air National Guard	301
Air National Guard mobility Air Force depot maintenance	301
Transfer Accounts	301
Funding for Formerly Used Defense Sites	301
Item of Special Interest	301
Defense Information System Network Access Transport Services	301
Test to improve the quality of agricultural produce available in commissary stores	302
Title IV—Military Personnel Authorizations	303
Subtitle A—Active Forces	303
End strengths for active forces (sec. 401)	303
Revision of permanent active duty end strength minimum levels (sec. 402)	304
Subtitle B—Reserve Forces	304
End strengths for Selected Reserve (sec. 411)	304
End strengths for Reserves on active duty in support of the Reserves (sec. 412)	305
End strengths for military technicians (dual status) (sec. 413)	305

	Page
Title IV—Military Personnel Authorizations—Continued	
Subtitle B—Reserve Forces—Continued	
Fiscal year 2006 limitations on non-dual status technicians (sec. 414)	305
Subtitle C—Authorizations of Appropriations	306
Authorization of appropriations for military personnel (sec. 421)	306
Armed Forces Retirement Home (sec. 422)	306
Title V—Military Personnel Policy	309
Subtitle A—Officer Personnel Policy	309
Exclusion of general and flag officers on leave pending separation or retirement from computation of active duty officers for general and flag officer distribution and strength limitations (sec. 501)	309
Expansion of joint duty assignments for Reserve component general and flag officers (sec. 502)	309
Deadline for receipt by promotion selection boards of correspondence from eligible officers (sec. 503)	309
Furnishing to promotion selection boards of adverse information on officers eligible for promotion to certain senior grades (sec. 504)	310
Grades of the Judge Advocates General (sec. 505)	310
Temporary extension of authority to reduce minimum length of commissioned service for voluntary retirement as an officer (sec. 506)	310
Modification of strength in grade limitations applicable to Reserve flag officers in active status (sec. 507)	311
Uniform authority for deferment of separation of Reserve general and flag officers for age (sec. 508)	311
Subtitle B—Enlisted Personnel Policy	311
Uniform citizenship or residency requirements for enlistment in the Armed Forces (sec. 521)	311
Subtitle C—Reserve Component Personnel Matters	312
Requirements for physical examinations and medical and dental readiness for members of the Selected Reserve not on active duty (sec. 531)	312
Repeal of limitation on amount of financial assistance under Reserve Officers' Training Corps scholarship program (sec. 532)	312
Procedures for suspending financial assistance and subsistence allowance for senior ROTC cadets and midshipmen on the basis of health-related conditions (sec. 533)	312
Increase in maximum number of Army Reserve and Army National Guard cadets under Reserve Officers' Training Corps (sec. 534)	313
Modification of educational assistance for Reserves supporting contingency and other operations (sec. 535)	313
Repeal of limitation on authority to redesignate the Naval Reserve as the Navy Reserve (sec. 536)	313
Performance by reserve component personnel of operational test and evaluation and training relating to new equipment (sec. 537)	314
Subtitle D—Military Justice and Related Matters	314
Modification of periods of prosecution by courts-martial for murder, rape, and child abuse (sec. 551)	314
Establishment of offense of stalking (sec. 552)	315
Clarification of authority of military legal assistance counsel (sec. 553)	315
Administrative censures of members of the Armed Forces (sec. 554)	316
Reports by officers and senior enlisted personnel of matters relating to violations or alleged violations of criminal law (sec. 555)	316
Subtitle E—Military Service Academies	317
Authority to retain permanent military professors at the Naval Academy after more than 30 years of service (sec. 561)	317
Subtitle F—Administrative Matters	317
Clarification of leave accrual for members assigned to a deployable ship or mobile unit or other duty (sec. 571)	317
Limitation on conversion of military medical and dental billets to civilian positions (sec. 572)	318
Subtitle G—Defense Dependents Education Matters	318
Expansion of authorized enrollment in Department of Defense dependents schools overseas (sec. 581)	318
Assistance to local educational agencies with significant enrollment increases in military dependent students due to troop relocations, creation of new units, and realignments under BRAC (sec. 582)	318

XI

	Page
Title V—Military Personnel Policy—Continued	
Subtitle G—Defense Dependents Education Matters—Continued	
Assistance to local educational agencies that benefit dependents of members of the Armed Forces and Department of Defense civilian employees (sec. 583)	319
Impact aid for children with severe disabilities (sec. 584)	319
Subtitle H—Other Matters	319
Policy and procedures on casualty assistance to survivors of military decedents (sec. 591)	319
Modification and enhancement of mission and authorities of the Naval Postgraduate School (sec. 592)	320
Expansion and enhancement of authority to present recognition items for recruitment and retention purposes (sec. 593)	320
Requirement for regulations on policies and procedures on personal commercial solicitations on Department of Defense installations (sec. 594)	321
Federal assistance for State programs under the National Guard Youth Challenge program (sec. 595)	322
Items of Special Interest	322
Air Force Future Total Force Planning	322
Opportunity for general or flag officer review of involuntary administrative separation of victims of sexual assault and protection against reprisals for victim advocates	323
Premium conversion/flexible spending account options for service members	323
Western Governors University	324
Title VI—Compensation and Other Personnel Benefits	325
Subtitle A—Pay and Allowances	325
Eligibility for additional pay of permanent military professors at United States Naval Academy with over 36 years of service (sec. 601)	325
Enhanced authority for agency contributions for members of the Armed Forces participating in the Thrift Savings Plan (sec. 602)	325
Permanent authority for supplemental subsistence allowance for low-income members with dependents (sec. 603)	325
Modification of pay considered as saved pay upon appointment of an enlisted member as an officer (sec. 604)	326
Subtitle B—Bonuses and Special and Incentive Pays	326
One-year extension of certain bonus and special pay authorities for Reserve forces (sec. 611)	326
One-year extension of certain bonus and special pay authorities for certain health care professionals (sec. 612)	326
One-year extension of special pay and bonus authorities for nuclear officers (sec. 613)	326
One-year extension of other bonus and special pay authorities (sec. 614)	326
Payment and repayment of assignment incentive pay (sec. 615)	327
Increase in amount of selective reenlistment bonus for certain senior supervisory nuclear qualified enlisted personnel (sec. 616)	327
Consolidation and modification of bonuses for affiliation or enlistment in the Selected Reserve (sec. 617)	327
Expansion and enhancement of special pay for enlisted members of the Selected Reserve assigned to certain high priority units (sec. 618)	328
Retention incentive bonus for members of the Selected Reserve qualified in a critical military skill or specialty (sec. 619)	328
Termination of limitation on duration of payment of imminent danger special pay during hospitalization (sec. 620)	328
Authority for retroactive payment of imminent danger special pay (sec. 621)	328
Authority to pay foreign language proficiency pay to members on active duty as a bonus (sec. 622)	329
Incentive bonus for transfer between the Armed Forces (sec. 623)	329
Subtitle C—Travel and Transportation Allowances	329
Transportation of family members in connection with the repatriation of service members or civilian employees held captive (sec. 631)	329
Subtitle D—Retired Pay and Survivor Benefits	330

XII

	Page
Title VI—Compensation and Other Personnel Benefits—Continued	
Subtitle D—Retired Pay and Survivor Benefits—Continued	
Enhancement of death gratuity and life insurance benefits for deaths from combat-related causes or causes incurred in combat operations or areas (sec. 641)	330
Subtitle E—Other Matters	330
Payment of expenses of members of the Armed Forces to obtain professional credentials (sec. 651)	330
Pilot program on contributions to Thrift Savings Plan for initial enlistees in the Armed Forces (sec. 652)	331
Title VII—Health Care	333
Subtitle A—Benefits Matters	333
Clarification of eligibility of Reserve officers for health care pending active duty following issuance of orders to active duty (sec. 701)	333
Limitation on deductible and copayment requirements for nursing home residents under the pharmacy benefits program (sec. 702)	333
Eligibility of surviving active duty spouses of deceased members for enrollment as dependents in a TRICARE dental plan (sec. 703)	333
Increased period of continued TRICARE Prime coverage of children of members of the uniformed services who die while serving on active duty for a period of more than 30 days (sec. 704)	333
Subtitle B—Planning, Programming, and Management	334
TRICARE Standard coordinators in TRICARE regional offices (sec. 711)	334
Report on delivery of health care benefits through military health care system (sec. 712)	334
Comptroller General report on differential payments to children's hospitals for health care for children dependents under TRICARE (sec. 713)	335
Repeal of requirement for Comptroller General reviews of certain Department of Defense-Department of Veterans Affairs projects on sharing of health care resources (sec. 714)	335
Surveys on TRICARE standard (sec. 715)	335
Modification of health care quality information and technology enhancement report requirements (sec. 716)	336
Modification of authorities relating to patient care reporting and management system (sec. 717)	336
Subtitle C—Other Matters	336
Report on adverse health events associated with use of anti-malarial drugs (sec. 731)	336
Pilot projects on early diagnosis and treatment of Post Traumatic Stress Disorder and other mental health conditions (sec. 732)	336
Items of Special Interest	337
Active-duty medical extension	337
Comptroller General study of adequacy of TRICARE reimbursement for obstetrical, gynecological, and pediatric services	338
Increased awareness for families of TRICARE mental health benefits and the need for appropriate mental health services for families overseas	338
Specialty health care services referrals and authorizations	339
Title VIII—Acquisition Policy, Acquisition Management, and Related Matters	341
Overview	341
Subtitle A—Acquisition Policy and Management	349
Internal controls for procurements on behalf of the Department of Defense (sec. 801)	349
Contract Support Acquisition Centers (sec. 802)	349
Authority to enter into acquisition and cross-servicing agreements with regional organizations of which the United States is not a member (sec. 803)	350
Requirement for authorization for procurement of major weapon systems as commercial items (sec. 804)	351
Report on service surcharges for purchases made for military departments through other Department of Defense agencies (sec. 805)	351
Review of defense acquisition structures (sec. 806)	351
Subtitle B—Defense Industrial Base Matters	352
Clarification of exception from Buy American requirements for procurement of perishable food for establishments outside the United States (sec. 811)	352

XIII

Title VIII—Acquisition Policy, Acquisition Management, and Related Mat- ters—Continued	
Subtitle B—Defense Industrial Base Matters—Continued	
Conditional waiver of domestic source or content requirements for certain countries with reciprocal procurement agreements with the United States (sec. 812)	352
Consistency with United States obligations under trade agreements (sec. 813)	353
Identification of areas of research and development effort for pur- poses of the Small Business Innovative Research program (sec. 814)	353
Subtitle C—Defense Contractor Matters	353
Requirements for defense contractors relating to certain former De- partment of Defense officials (sec. 821)	353
Review of certain contractor ethics matters (sec. 822)	354
Contract fraud risk assessment (sec. 823)	355
Subtitle D—Defense Acquisition Workforce Matters	356
Availability of funds in Acquisition Workforce Training Fund for defense acquisition workforce improvements (sec. 831)	356
Limitation and reinvestment authority relating to reduction of the defense acquisition and support workforce (sec. 832)	356
Technical amendments relating to defense acquisition workforce im- provements (sec. 833)	356
Subtitle E—Other Matters	357
Extension of contract goal for small disadvantaged business and cer- tain institutions of higher education (sec. 841)	357
Codification and modification of limitation on modification of military equipment within five years of retirement or disposal (sec. 842)	357
Clarification of rapid acquisition authority to respond to combat emergencies (sec. 843)	357
Modification of authority to carry out certain prototype projects (sec. 844)	357
Extension of certain authorities on contracting with employers of persons with disabilities (sec. 845)	358
Items of Special Interest	358
Commercial satellite bandwidth	358
Defense trade data	359
Department of Defense anti-tamper program	359
Industrial base issues	360
Implementation of authority to enter energy savings performance contracts	360
National technology and industrial base considerations	361
Title IX—Department of Defense Organization and Management	363
Subtitle A—Duties and Functions of Department of Defense Officers and Organizations	363
Directors of small business programs (sec. 901)	363
Executive agent for acquisition of capabilities to defend the homeland against missiles and other low-altitude aircraft (sec. 902)	363
Subtitle B—Space Activities	364
Advisory committee on Department of Defense requirements for space control (Sec. 911)	364
Subtitle C—Other Matters	365
Acceptance of gifts and donations for Department of Defense regional centers for security studies (sec. 921)	365
Operational files of the Defense Intelligence Agency (sec. 922)	365
Prohibition on implementation of certain orders and guidance on functions and duties of the General Council and the Judge Advo- cate General of the Air Force (sec. 923)	365
Title X—General Provisions	367
Subtitle A—Financial Matters	367
Transfer authority (sec. 1001)	367
Incorporation of classified annex (sec. 1002)	367
United States contribution to NATO common-funded budgets in fiscal year 2006 (sec. 1003)	367
Reduction in certain authorizations due to savings relating to lower inflation (sec. 1004)	367
Authorization of supplemental appropriations for fiscal year 2005 (sec. 1005)	367

XIV

AUTHORIZING APPROPRIATIONS FOR FISCAL YEAR 2006 FOR MILITARY ACTIVITIES OF THE DEPARTMENT OF DEFENSE, FOR MILITARY CONSTRUCTION, AND FOR DEFENSE ACTIVITIES OF THE DEPARTMENT OF ENERGY, TO PRESCRIBE PERSONNEL STRENGTHS FOR SUCH FISCAL YEAR FOR THE ARMED FORCES, AND FOR OTHER PURPOSES

MAY 17, 2005.—Ordered to be printed

Mr. WARNER, from the Committee on Armed Services,
submitted the following

R E P O R T

[To accompany S. 1042]

The Committee on Armed Services reports favorably an original bill to authorize appropriations during the fiscal year 2006 for military activities of the Department of Defense, for military construction, and for defense activities of the Department of Energy, to prescribe personnel strengths for such fiscal year for the Armed Forces, and for other purposes, and recommends that the bill do pass.

PURPOSE OF THE BILL

This bill would:

- (1) authorize appropriations for (a) procurement, (b) research, development, test and evaluation, (c) operation and maintenance and the revolving and management funds of the Department of Defense for fiscal year 2006;
- (2) authorize the personnel end strengths for each military active duty component of the Armed Forces for fiscal year 2005;
- (3) authorize the personnel end strengths for the Selected Reserve of each of the Reserve components of the Armed Forces for fiscal year 2006;
- (4) impose certain reporting requirements;
- (5) impose certain limitations with regard to specific procurement and research, development, test and evaluation actions and manpower strengths; provide certain additional legislative authority, and make certain changes to existing law;

- (6) authorize appropriations for military construction programs of the Department of Defense for fiscal year 2006; and
- (7) authorize appropriations for national security programs of the Department of Energy for fiscal year 2006.

Committee overview and recommendations

The past three and one-half years have been a time of great successes and enormous challenges for the U.S. Armed Forces. The mission of the men and women in uniform to defend the nation has never been executed with better skill or dedication on the battlefield. The rapid successes of Operation Enduring Freedom in Afghanistan and Operation Iraqi Freedom have evolved into the hard work of counter-insurgency, reconstruction, and stability operations necessary to achieve peace and security in these troubled regions. Such important work brings new challenges associated with the extraordinarily high operational tempo on people and equipment, the technological challenges of countering asymmetric threats such as improvised explosive devices, the demands of transforming the Armed Forces for future threats, and the responsibility of the nation to properly care for those who volunteer to serve—Active, Reserve, National Guard, and retired—and their families.

The National Defense Authorization Act for Fiscal Year 2006 addresses these challenges. This bill is being considered by the committee at a time when the United States continues to lead a coalition of nations to defeat terrorism globally and to defend freedom and democracy. Hundreds of thousands of soldiers, sailors, airmen, Marines, and Coast Guardsmen—Active, Reserve, and National Guard—countless civilians who support military, diplomatic, and humanitarian operations have served, and more are serving valiantly in Iraq, Afghanistan, and other locations to secure hard-won military successes and to preserve peace and freedom. Successful elections in Iraq and Afghanistan in the past year are testament to the yearning of the people of those nations for a voice in their own destiny, the willingness of the United States to assist, and the professionalism of the brave Americans who volunteer to serve in uniform. The U.S. Armed Forces, serving around the world, are truly the first line of defense in the security of the U.S. homeland.

The committee is ever mindful of the risks members of the U.S. Armed Forces face every day, and of the many sacrifices made by the families and communities that support them. Our men and women in uniform have been asked to do much in the past year, and they have responded in the finest traditions of the generations of Americans that preceded them. Tragically, many members of the U.S. Armed Forces, as well as a number of civilian employees and contractors of the Department of Defense have been killed in service to their country, and many more have been wounded. On behalf of a grateful nation, the committee is committed to ensuring that those who have sacrificed so much will not be forgotten and will receive the care and support that they deserve. The American people are proud of their Armed Forces for what they have accomplished, for their selfless sacrifices, and for the manner in which they represent American values and the generosity of America.

While recent successes have proven the value of past investment in the people and the equipment of the U.S. Armed Forces, there is no room for complacency. A recurring lesson of history is that na-

tional security threats are ever-changing and persistent. Victory and success must be accompanied by vigilance. Such vigilance takes the form of readiness of today's forces and preparation for future threats to the security of the United States, its interests, and its allies.

Since the beginning of the 109th Congress, the Committee on Armed Services of the Senate has conducted 35 hearings and received numerous policy and operational briefings on the President's budget request for fiscal year 2006 and related defense issues. As a result of these deliberations, the committee identified seven priorities to guide its work on the National Defense Authorization Act for Fiscal Year 2006:

- (1) Provide our men and women in uniform with the resources, training, technology, equipment, and authorities they need to win the global war on terrorism, with particular focus on supporting the conduct of military operations in Iraq and Afghanistan.

- (2) Enhance the ability of the Department of Defense to fulfill its homeland defense responsibilities by providing the resources and authorities necessary for the Department to assist in protecting our nation against all current and anticipated forms of attack.

- (3) Provide the resources and authorities needed to rapidly acquire the full range of force protection capabilities for deployed forces.

- (4) Continue the committee's commitment to improve the quality of life for those who serve—Active, Reserve, National Guard, and retired—and their families; enhance incentives to recruit and retain those who volunteer to serve in the Armed Forces; provide the best possible care and rehabilitation services for those who bear the wounds of combat; and ensure generous support for the survivors of those military personnel killed in defense of our Nation.

- (5) Sustain the readiness of our Armed Forces to conduct military operations against all current and anticipated threats.

- (6) Support the Department's efforts to develop the innovative, forward-looking capabilities necessary to modernize and transform the Armed Forces to successfully counter current and future threats, particularly by enhancing our technology in areas such as unmanned systems, personal protection systems, and measures to counter improvised explosive devices.

- (7) Continue active committee oversight of Department programs and operations, particularly in the areas of acquisition reform and contract management, to ensure proper stewardship of taxpayers' dollars.

In order to fund these priorities, the committee recommends \$441.6 billion in budget authority for defense programs for fiscal year 2006, an increase of \$21.0 billion—or 3.1 percent in real terms—above the amount authorized by the Congress for fiscal year 2005. The committee's recommendations include: \$78.2 billion in procurement funding, a \$1.5 billion increase above the President's budget request; \$69.8 billion in funding for research, development, test, and evaluation, a \$0.4 million increase over the requested level; and \$109.2 billion for military personnel, a \$237 million increase over the requested level. The committee's rec-

ommendation also includes budget authority for \$50.0 billion in emergency supplemental funding in fiscal year 2006 to cover costs of military operations in Iraq, Afghanistan, and the global war on terrorism.

The committee's first priority was to provide the Department of Defense with the resources and authorities it needs to win the global war on terrorism. In these areas, the committee authorizes an increase of almost \$600.0 million over the budget request. Funding highlights for ground forces include: \$2.9 billion for new helicopters and helicopter modifications, in order to get needed lift and attack helicopters to troops in the field and \$878.4 million to continue procuring the Stryker armored vehicles that are proving so valuable in military operations in Iraq. To improve the ability of special operations forces, a major component of the war on terror, the committee authorized an increase of \$84.5 million above the President's budget request to accelerate the availability of important new capabilities. For naval forces, the committee authorized an increase of \$336.7 million to the Shipbuilding and Conversion, Navy, account for a total of \$9.1 billion to accelerate development of the CVN-78 aircraft carrier, the LHA(R) amphibious ship, and the second DD(X) destroyer of the class, as well as authorizing the four ships in the President's budget request. For air forces, the committee supported the President's budget request funding levels for major aircraft acquisition programs. The committee provided for the continued funding of the C-130J aircraft multiyear contract and added \$37.7 million for the procurement of center wing box assemblies for C-130E/H aircraft to improve the availability of these important intra-theater lift assets.

To enhance the Department's homeland defense capabilities, the committee added \$48.8 million above the President's budget request including: an additional \$19.8 million to provide expanded capabilities for the Weapons of Mass Destruction-Civil Support teams that provide the Department support to local and regional first responders in every State and territory of the United States and an additional \$20.0 million for cybersecurity research. The committee also authorized an additional \$60.0 million for development and fielding of chemical and biological agent detection and protection technologies, that have application for both homeland defense and for protection of deployed forces. To protect America from missile threats, the committee authorized \$8.8 billion for ballistic missile defense, and reemphasized the need to develop defenses against cruise missiles, unmanned aerial vehicles, and other low-altitude air threats.

To address the force protection needs of deployed U.S. forces, the committee authorized over \$1.4 billion for various programs to protect personnel, vehicles, and installations, including: \$344.2 million for up-armored HMMWV's and armor kits for other wheeled vehicles, an increase of \$120.0 million above the requested amount; and an additional \$500.0 million for research, development, and fielding of technologies to counter improvised explosive devices; and added \$117.8 million for individual body armor. The committee is fully supportive of the Department of Defense efforts to improve the force protection capabilities available to deployed forces and will work closely with the Department of Defense and the military serv-

ices to ensure that all requirements to improve force protection are fully funded.

The committee is committed to continuing to improve the quality of life of the men and women in uniform—Active, Reserve, National Guard, and retired—and their families. The proposed bill would authorize a 3.1 percent across-the-board pay raise for all uniformed service personnel. The committee has increased the death gratuity payable to survivors of military decedents to \$100,000 when the death occurs under combat-related conditions or in designated combat zones. Additionally, the committee authorized an increase in the maximum Servicemembers' Group Life Insurance benefit from \$250,000 to \$400,000.

The committee has authorized full funding for the defense health program, and is committed to ensuring that there is no erosion in quality health care for all beneficiaries. To this end, the committee authorizes an additional \$82.2 million to ensure the medical readiness of the Reserve components. The committee is pleased that the Department has taken steps to implement the full range of health care benefits for members of Reserve components and their families—both before and after deployment—that was authorized in the Ronald W. Reagan National Defense Authorization Act for 2005 (Public Law 108–375).

An important aspect of quality of life for service members are the benefits and services available to family members. The committee recognizes the tremendous dedication and sacrifices of military family members who share in every way in the successes, accomplishments, and hardships of the members of the Armed Forces. The committee supports all of the benefits for family members contained in the President's budget request and authorizes an increase of \$70.0 million to further enhance support for military families, particularly with regard to additional child care services.

The quality of combat medicine has improved dramatically since World War II, the Korean Conflict, and Vietnam. More service members now survive the initial wounds of war, and it is important that the best possible care and rehabilitative services are available for those wounded in combat. The bill would authorize various provisions that recognize the evolving nature of battlefield medicine, the long-term needs of seriously wounded survivors and combat veterans, and the social and fiscal support responsibilities of the nation to the survivors of those who make the ultimate sacrifice.

The committee is concerned about the challenges of recruiting and retaining volunteers for the Active and Reserve component force in a wartime environment. In addition to the quality of life improvements already discussed, the committee has authorized a variety of incentives and bonuses for Active Duty and Reserve component personnel, and will continue to work closely with the Department of Defense and the military services to ensure that they have the resources and authorities they need to recruit and retain a high quality volunteer force.

The committee recognizes that U.S. ground forces in general, and the U.S. Army in particular, have experienced a high operational tempo for an extended period. The bill recommended by the committee authorizes an increase in active-duty end strength for the Army of 20,000 personnel in fiscal year 2006, for an end strength level of 522,400. The active-duty end strength for the U.S. Marine

Corps is maintained at 178,000, equal to the end strength authorized for fiscal year 2005, and 3,000 above the President's budget request. The bill supports the end strength levels of the other military services for both Active and Reserve components recommended by the President, and includes an increase of 85 National Guard personnel to man augmentation elements to the Weapons of Mass Destruction—Civil Support Teams. The committee supports the initiatives by the Army to reorganize their combat formations into modular brigade sized units to provide more combat formations and a more deployable, flexible force.

The administration requested \$12.1 billion for military construction and family housing, including \$1.9 billion to initiate activities required to carry out the results of the 2005 Base Realignment and Closure Commission recommendations. The committee recommendations include certain adjustments to provide prudent investment in overseas locations and increased investment in installations in the United States. Among the funding adjustments made by the committee are increases of over \$120.0 million in critical unfunded projects identified by the military services, and an additional \$187.0 million to fund improvements to facilities supporting National Guard and reserve forces needs.

Over the past several years, the committee has worked with the Department to ensure that necessary modernization, transformation, and long-range research were maintained, even in times of high operational tempo. The committee continues its support for these transformational activities, authorizing \$3.4 billion for the Army's Future Combat System development; \$115.4 million for tactical UAV's that have proven so valuable in recent military operations; and \$10.9 billion for defense science and technology programs, an increase of over \$400.0 million above the President's budget request, that are the foundation for future capabilities. The committee remains committed to the goals it set for the Department five years ago to have one-third of deep strike aircraft unmanned combat systems by the year 2010, and one-third of the ground combat vehicles unmanned by the year 2015.

The committee takes its oversight responsibilities over the Department of Defense and defense related activities of the Department of Energy very seriously. The bill contains several provisions designed to improve management and oversight of Department of Defense acquisition programs. These provisions would increase the size and quality of the acquisition workforce, strengthen defense ethics programs, and reduce the risk of contract fraud. In addition, the bill would expand the authority of the Secretary of Defense to rapidly acquire capabilities to ensure that our deployed troops can quickly get needed equipment.

The committee is particularly concerned about the state of the current shipbuilding program. The committee does not believe that the current or projected level of funding for shipbuilding is adequate to build the numbers of ships that will allow the Navy to perform its global missions or to sustain an increasingly fragile industrial base. The founding fathers were specific in the United States Constitution that it is the duty of Congress to "maintain" a Navy. They had the foresight to realize that a Navy cannot be quickly constituted, or reconstituted. That is as true today as it was over two centuries ago. If the United States is to remain a

global power, it must have a global presence. As a maritime nation, that presence is often displayed in the form of naval ships, not only through ensuring open sea lines of communication and trade in international waters, but also through the inherently diplomatic mission of visiting foreign ports and “showing the flag”.

The Navy currently has only 288 ships in the fleet. This is the smallest number of ships in the Navy since before the start of the Second World War. It is true that these ships possess capabilities far greater than those of the past, but global presence demands sufficient numbers of ships as well as the capabilities possessed by those ships.

Numerous officials have testified before this committee that shipbuilding must become a subject of national debate. They have testified that the Department of Defense, the Congress, and the shipbuilders need to engage in this debate. Low shipbuilding rates have resulted in increased costs for ships, as recently documented by the Government Accountability Office. These increased costs have translated into even lower shipbuilding rates. The committee believes this downward spiral needs to be reversed. To accomplish this, the committee believes that significantly higher funding is required in the shipbuilding budget. That funding must be stable, and some degree of flexibility is required in the funding mechanisms for shipbuilding to allow for efficient management while visibility remains to allow for sufficient oversight.

The committee believes that the shipbuilding budget must be reviewed by the administration as a matter of the utmost urgency in the coming year. The committee recommends that the President consider establishing a special shipbuilding fund, which would be funded apart from the normal give and take within the Department of Defense budget process, to dedicate a sustained amount of funding for the construction of naval ships. The Congressional Budget Office estimates, based on testimony before the committee, that the amount of funding necessary to maintain a Navy of appropriate size and capability to deter any potential adversaries and meet U.S. global commitments is at least \$15.0 billion a year, and that it needs to be sustained at that level for a period of 10 to 15 years.

America has much to be thankful for in terms of the patriotic young Americans who volunteer to serve and who have individually and collectively performed with such professionalism and distinction in defense of the United States. The efforts of the U.S. Armed Forces have been remarkable, but they are not without cost—the loss of priceless lives that must be honored and remembered; the responsibility to care for the survivors and their families; the cost of ongoing operations and related refurbishment or replacement of heavily used equipment; and the responsibility to ensure that those who serve, and their families, receive the quality of life and benefits they have earned and deserve. As a nation at war against enemies who have attacked our homeland and who seek to impose the tyranny of their beliefs on others, Americans understand their responsibility to defeat the scourge of terrorism at any cost to ensure the security of America.

The U.S. Armed Forces are the best trained, best equipped, and most experienced military force in the world today. To ensure the security of America, the excellence of this force must be sustained,

modernized, and transformed. The committee believes that the National Defense Authorization Act for Fiscal Year 2006 prudently addresses the defense needs of the United States, recognizes the service and sacrifice of our men and women in uniform and their families, provides the resources needed to win the global war on terrorism, and makes the necessary investments to provide for the security of the nation in the future.

Explanation of funding summary

The administration's budget request for the national defense function of the federal budget for fiscal year 2006 was \$435.9 billion. According to the estimating procedures used by the Congressional Budget Office (CBO), the budget implication of the amount requested was \$441.6 billion. The funding summary table that follows uses the budget authority as calculated by CBO.

The following table summarizes both the direct authorizations and equivalent budget authority levels for fiscal year 2006 defense programs. The columns relating to the authorization request do not include funding for the following items: Concurrent Receipt Accrual Payments to the Military Retirement Fund; military construction authorizations provided in prior years; and other portions of the defense budget that are not within the jurisdiction of this committee, or that do not require an annual authorization.

Funding for all programs in the national defense function is reflected in the columns related to the budget authority request and the total budget authority implication of the authorizations in this report.

The committee recommends funding for national defense programs totaling \$441.6 billion in budget authority. This funding level is consistent with the budget authority level of \$441.6 billion for the national defense function recommended in the Concurrent Resolution on the Budget for Fiscal Year 2006 (H. Con. Res. 95), which was adopted on April 28, 2005.

**DIVISION A—DEPARTMENT OF DEFENSE
AUTHORIZATIONS**

TITLE I—PROCUREMENT

Subtitle A—Authorization of Appropriations

Explanation of tables

The following tables provide the program-level detailed guidance for the funding authorized in title I of this Act. The tables also display the funding requested by the administration in the fiscal year 2006 budget request for procurement programs, and indicate those programs for which the committee either increased or decreased the requested amounts. As in the past, the administration may not exceed the authorized amounts (as set forth in the tables or, if unchanged from the administration request, as set forth in budget justification documents of the Department of Defense), without a reprogramming action in accordance with established procedures. Unless noted in this report, funding changes to the budget request are made without prejudice.

NATIONAL DEFENSE AUTHORIZATION FOR FISCAL YEAR 2006
(Dollars in Thousands)

<u>Title I -- PROCUREMENT</u>	<u>Authorization Request</u>	<u>Senate Change</u>	<u>Senate Authorization</u>
Aircraft Procurement, Army	2,800,880		2,800,880

Multiyear procurement authority for AH-64D Apache attack helicopter block II conversions (sec. 111)

The committee recommends a provision that would provide authority to the Secretary of the Army to enter into a multiyear contract for AH-64 Apache attack helicopter Block II Conversions. The committee commends the Army for its commitment to Army aviation modernization by reinvesting the resources made available by the Comanche termination.

This provision provides authorization for the third multiyear procurement for the conversion of AH-64A Apache helicopters to the "D" model Apache. Multiyear one delivered 232 AH-64D helicopters from fiscal years 1996 through 2002 and a second multiyear will complete delivery of an additional 269 AH-64D helicopters in fiscal year 2006. The committee understands that the Army will convert an additional 96 AH-64A helicopters with the multiyear procurement authority granted by this provision. Previous multiyear procurement contracts have yielded significant savings and the committee anticipates that a third multiyear will yield savings as well.

Multiyear procurement authority for modernized target acquisition designation/pilot night vision sensors for AH-64D Apache attack helicopters (sec. 112)

The committee recommends a provision that would provide authority to the Secretary of the Army to enter into a multiyear procurement contract for the Modernized Target Acquisition Designation Sight/Pilot Night Vision Sensor (MTADS) for Apache helicopters. MTADS will be incorporated into and integrated into the program to convert AH-64A Apaches to the "D" model Apache. MTADS provides a Second Generation Forward (SGF) Looking Infrared (FLIR) sensor suite for the Army's fleet of Apache aircraft. The SGF system enhances the Apache pilot's ability to engage targets during night operations and adverse weather conditions, improves reliability, and reduces operations and support costs.

Multiyear procurement authority for utility helicopters (sec. 113)

The committee recommends a provision that would provide authority to the Secretary of the Army to enter into a multiyear contract for the procurement of UH-60M Black Hawk utility helicopters and, acting as the executive agent for the Department of the Navy, enter into a multiyear contract for the procurement of MH-60S Sea Hawk utility helicopters.

The budget request included \$505.7 million for the procurement of 41 UH-60M Black Hawk helicopters; \$24.7 million for the advanced procurement of UH-60 Black Hawk helicopters; \$453.4 million for the procurement of 26 MH-60S Sea Hawk helicopters; and \$125.7 million for the advanced procurement of MH-60S Sea Hawk helicopters under a multiyear procurement program.

The committee notes that based on a comparison of estimated prices for five single year contracts with the estimated price for one 5 year multiyear for the UH-60M airframe over fiscal years 2007-2011, there is a savings of approximately \$304.2 million. A similar

analysis of the MH-60S airframe shows an estimated savings of \$94.6 million. The committee also notes that the current UH-60M and MH-60S budget requests are based on a follow-on multiyear contract beginning in fiscal year 2007.

The committee believes that the Congress should provide the Secretary of the Army with the authority to obtain these savings, and encourages the Secretary of Defense to review other current and planned helicopter programs for similar efficiencies through joint service multiyear procurements.

Missile Procurement, Army

Advanced precision kill weapon system

The budget request included \$34.1 million in Missile Procurement, Army (MPA), for the procurement of 600 Advanced Precision Kill Weapon Systems (APKWS). The committee understands the APKWS program was restructured on April 4, 2005, because the contractor was under-performing in the areas of cost, schedule, and performance; and APKWS would not have met the defined user requirement. The committee recommends a decrease of \$5.0 million in MPA to procure 135 fewer missiles, for a total authorization of \$29.1 million.

Weapons and Tracked Vehicles

Lightweight 155 millimeter Howitzer

The budget request included \$46.8 million in Weapons and Tracked Combat Vehicles, Army (WTCV), for the Lightweight 155 millimeter (LW-155) towed Howitzer, a joint U.S. Marine Corps (USMC)/Army program. In the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375), the Congress authorized a multiyear procurement contract as the program entered into a low rate initial production phase of the program. The Army requires additional LW-155s for the 7th Stryker Brigade Combat Team. This item is on the Chief of Staff of the Army's unfunded priorities list. The committee recommends an increase of \$32.4 million in WTCV for additional LW-155s, for a total authorization of \$79.2 million in WTCV.

Army Ammunition

M1028 120mm tank cartridge

The budget request included \$8.3 million in Procurement of Ammunition, Army (PAA), for the M1028 120mm tank cartridge. The committee notes the utility of the M1028 in improving the M1A1 Main Battle Tank's urban warfare capability and improving tank survivability against massed assaulting infantry with hand held anti-tank and automatic weapons. The M1028 is currently funded to achieve 75 percent of the total war reserve requirement. The committee recommends an increase of \$5.5 million in PAA for the M1028 to excel the acquisition of the M1028mm tank cartridge.

Modern demolition initiator

The budget request included no funding in Procurement Ammunition, Army (PAA), for the modern demolition initiator (MDI). The

committee notes that MDIs are non-electric detonators used to initiate munitions and explosives. The benefits of MDI include safety in the modern electronic battle space, high reliability, interoperability with existing fielded demolition systems, and lethality. The committee recommends an increase of \$1.9 million in PAA for MDIs.

Rapid wall breaching kit

The budget request included no funding in Procurement Ammunition, Army (PAA), for the rapid wall breaching kit. The committee notes that rapid wall breaching kits are one-man portable devices capable of creating man-sized holes in triple brick masonry or double reinforced concrete structural walls. The committee recommends an increase of \$3.0 million in PAA for rapid wall breaching kits.

Ammunition peculiar equipment outloading modules

The budget request included no funding for ammunition peculiar equipment outloading modules. The committee notes that a modern robotic-controlled strategic ammunition outloading module could be capable of supporting current readiness requirements while increasing ammunition plant safety, security, and capacity. Army officials report that a design exists for modernizing current outloading capabilities with robotic-controlled technologies at ammunition plants. The committee recommends an increase of \$8.0 million in PAA for ammunition peculiar equipment outloading modules.

Provision of industrial facilities

The budget request included \$33.5 million in Procurement of Ammunition, Army (PAA), for the provision of industrial facilities, including the establishment, augmentation, and modernization of ammunition production capabilities. The committee notes that this represents an 18 percent reduction in this account from the funding level requested for fiscal year 2005. Additional funding for the provision of industrial facilities has been identified on the Chief of Staff of the Army unfunded priorities list.

The committee recommends an increase of \$82.4 million in PAA for the provision of industrial facilities, as follows: \$40.0 million to reduce the risk of production loss in acid concentration and nitrocellulose; \$22.4 million for small-caliber ammunition production facilities modernization; \$10.0 million to continue facility modernization initiated in fiscal year 2003 with environmentally sound insensitive-munitions (IM) manufacturing and precision load, assemble, and pack capability required to produce munitions with current and future IM type mix-cast-cure, melt-load and press-able explosive formulations; and \$10.0 million to modernize HMX/RDX nitrate explosive formulation capabilities for use in U.S. precision guided weapons production.

Conventional ammunition demilitarization

The budget request included \$102.9 million in Procurement of Ammunition, Army (PAA), for conventional ammunition demilitarization, including \$19.5 million for missile demilitarization. The

committee is concerned with the resourcing of the Army's strategic plan for conventional ammunition disposal, including the resourcing of missile recycling. The committee notes that the missile recycling center (MRC) energetics processing module (EPM) is an important component of the Army's missile demilitarization plan. The committee recommends an increase of \$10.0 million in PAA for the MRC EPM.

The disposal of excess conventional ammunition is an integral phase of the life-cycle management of conventional ammunition. The Army 2004 report, "Strategic Plan: Demilitarization FY2005–2011," outlines a series of goals and milestones to reduce the excess conventional ammunition stockpile to manageable levels in future years: 100,000 short tons for ammunition and 30,000 missiles. In fiscal year 2005, the excess conventional ammunition stockpile includes at least 431,700 short tons of conventional ammunition and 77,566 missiles.

The committee notes that current projections indicate that the excess conventional ammunition disposal stockpile and the excess missile inventory are expected to continue to increase and exceed 546,000 short tons and 125,000 missiles, respectively, by fiscal year 2011. In addition, Army officials note that current projections for the growth rate of the excess stockpile do not include pending decisions related to the disposal of munitions in the War Reserve Stockpile, Allies–Korea and disposal of conventional mines. Therefore, the projection of the excess conventional ammunition stockpile in 2011 may be significantly understated.

The committee believes that failing to identify accurately the magnitude of the excess conventional ammunition stockpile and failing to reduce the excess conventional ammunition stockpile will present problems, including impeding access to needed ammunition in support of ongoing contingency operations, and increased risk and costs related to the security and sustainment of excess conventional ammunition. Therefore, the committee directs the Secretary of the Army to review and update the strategic plan for disposal of excess conventional ammunition and to report to the committee any changes that result from that review. In addition, the committee urges the Department of Defense Comptroller to fund disposal of conventional ammunition demilitarization to attain manageable stockpile levels outlined in the Army's strategic plan to the maximum extent possible.

Other Procurement, Army

Movement tracking system

The budget request included \$207.1 million in Other Procurement, Army (OPA), for the Family of Heavy Tactical Vehicles, including \$27.6 million for the Movement Tracking System (MTS). MTS provides commanders with the capability to communicate with and track the location of vehicles. The committee understands that the MTS has provided valuable communications and vehicle location information during Operation Iraqi Freedom. The committee notes that the Chief of Staff of the Army has identified additional funding for MTS devices for the 7th Stryker Brigade Combat Team on his unfunded priorities list. The committee recommends

an increase of \$1.6 million in OPA for MTS, for a total authorization of \$208.7 million.

Night vision devices

The budget request included \$164.7 million in Other Procurement, Army (OPA), for night vision devices, including \$76.9 million for the procurement of AN/PVS-14 night vision devices and \$20.0 million for the procurement of enhanced night vision goggles (ENVG). These devices increase situational awareness, mobility, and lethality during low-light and nighttime operations. Additionally, the ENVG consists of a state-of-the-art, enhanced 3rd Generation image intensifier sensor, an uncooled long-wave infrared camera, and a miniature display to provide high resolution fused imagery to the individual soldier. Additional funding for these items is on the Chief of Staff of the Army's unfunded priorities list. The committee recommends an increase of \$20.2 million in OPA, for additional night vision devices.

Modular causeway system

The budget request included \$2.0 million in Other Procurement, Army (OPA), for causeway systems. The modular causeway system (MCS) is an assemblage of interoperable and interchangeable components, which constitute the Army's primary means of augmenting existing port facilities or conducting joint logistics over the shore (JLOTS). JLOTS, in particular, will be significant as the concept of sea-basing matures. The committee recommends an increase of \$15.0 million in OPA for the MCS.

Prohibition on acquisition of next generation destroyer (DD(X)) through a single naval shipyard (sec. 121)

The committee recommends a provision that would prohibit a winner take all acquisition strategy for the next generation destroyer (DD(X)) program. The provision would define a winner take all acquisition strategy, in relation to this program, as one which would procure, including design and construction, these destroyers through a single shipyard.

In the Future Years Defense Program (FYDP) presented with the fiscal year 2005 budget request, construction of more than one DD(X) a year was to have started in fiscal year 2007. The FYDP presented with the fiscal year 2006 budget request indicates that only one DD(X) a year will be procured in each year from fiscal years 2007 through 2011. This reduced procurement profile represents at least the third significant change for the DD(X) program in recent years. Additionally, the Secretary of the Navy has recently delivered an interim long-range plan for the construction of Naval vessels to Congress. This plan outlines a range of needed ships, with eight to 12 DD(X) destroyers establishing the range for that ship.

The committee is aware that the Navy has proposed a change in acquisition strategy for DD(X) due to the reduced procurement profile. The proposed change is to conduct a winner-take-all competition for the DD(X)-class of ships between the two shipyards which build surface combatants.

The committee is concerned with the sharp decline projected in the number of ships in the Navy, the low number of major combatants scheduled for construction, and the negative consequences for the U. S. shipbuilding industrial base that could result if a winner-take-all strategy for DD(X) were pursued. The committee believes that there is an unacceptable risk if the shipbuilding industry sizes itself to where only one surface combatant a year is being built. The committee urges the Navy to plan to build more than one major surface combatant ship a year as soon as possible. If fewer DD(X) destroyers are required, then acceleration of the follow-on surface combatant, the CG(X), should be pursued.

Elsewhere in this report, the committee recommends additional funding for advance procurement of the second DD(X) destroyer at the second shipyard.

Split funding authorization for CVN-78 aircraft carrier (sec. 122)

The committee recommends a provision that would authorize the Secretary of the Navy to enter into a contract to fund the detail design and construction of the aircraft carrier designated CVN-78 with the Shipbuilding & Conversion, Navy (SCN) account, with funding split over fiscal years 2007, 2008, 2009, and 2010.

The budget request includes \$564.9 million in SCN for the carrier replacement program, specifically for advance procurement of the CVN-78. The CVN-78 will be a new class of aircraft carrier, incorporating numerous new technologies. This budget request reflects the second one-year slip in the program in recent years. This slip would cause a delay in the delivery of the CVN-78 until fiscal year 2015, with the ship it is scheduled to replace, the USS *Enterprise*.

prise (CVN-65), scheduled to be decommissioned in fiscal year 2013. Additionally, this slip translates into a cost growth for CVN-78 of approximately \$400.0 million, according to the Navy.

The committee is concerned about this delay. The committee has been told there is no technical reason for the delay, but that the delay was driven by budget considerations. Both the Secretary of the Navy and the Chief of Naval operations testified that large capital assets such as aircraft carriers are difficult to fund under the traditional full-funding policy, and that more flexible methods of funding must be found and used. The program of record for CVN-78 has the detail design and construction funding split between two years. This provision would authorize that same funding to be split over four years, thereby allowing needed funding flexibility. The committee directs the Navy to provide an updated funding profile, fully funding the remaining costs of the ship from fiscal years 2007 through 2010, with delivery of the fiscal year 2007 budget request.

The committee is aware that the program requires additional funding in fiscal year 2006 to avoid this one-year delay. Therefore, the committee recommends an increase of \$86.7 million in SCN for CVN-78.

LHA replacement (LHA(R)) ship (sec. 123)

The committee recommends a provision that would authorize to be appropriated \$325.4 million for design, advance procurement, and advance construction of the first LHA replacement (LHA(R)) ship, and would allow the Secretary of the Navy to enter into a contract for this purpose in fiscal year 2006.

The provision would also authorize the Secretary of the Navy to enter into a contract for the detail design and construction of the LHA(R) in fiscal year 2007, with funds authorized in fiscal years 2007 and 2008, subject to the availability of appropriations for LHA(R) in each of those fiscal years.

The budget request included \$150.4 million in Shipbuilding & Conversion, Navy (SCN), for the design, advance procurement, and advance construction of the LHA(R) amphibious assault ship. The LHA(R)-class will be the functional replacement for the LHA-1 class of amphibious assault ships, which is nearing the end of its service life. The Chief of Naval Operations has included additional funding for LHA(R) as the number one priority on his unfunded priorities list. The committee understands that additional funding would accelerate delivery of and reduce the acquisition cost of this ship, and recommends an increase of \$175.0 million in SCN for the LHA(R).

Refueling and complex overhaul of the USS “Carl Vinson” (sec. 124)

The committee recommends a provision that would authorize the Secretary of the Navy to enter into a contract in fiscal year 2006 for the nuclear refueling and complex overhaul of the USS *Carl Vinson* (CVN-70). The provision would authorize \$1,493.6 million to be appropriated as the first increment in the incremental funding planned for this refueling. The provision would also stipulate that any obligation of the United States to make a payment under

the contract after fiscal year 2006 is subject to the availability of appropriations for that purpose.

Navy Aircraft

C-40A procurement

The budget request included \$10.3 million in Aircraft Procurement, Navy (APN), for C-40A site activation, but included no funding for the procurement of C-40A aircraft.

The C-40A replaces aging C-9 aircraft and provides improved time critical logistics support. Procurement of the C-40A is included on the Chief of Naval Operations' unfunded priorities list. The committee recommends an increase of \$77.9 million in APN for the procurement of one C-40A aircraft.

Advanced targeting pods

The budget request included \$422.4 million in Aircraft Procurement, Navy (APN), for modifications to the F/A-18 aircraft, but included no funding for LITENING advanced targeting pods (ATPs) for the F/A-18D aircraft. The LITENING ATP will supplement and replace the current targeting pod with a new system that provides increased combat effectiveness across several mission areas. The procurement of LITENING ATP is included on the Commandant of the Marine Corps' unfunded priorities list. The committee recommends an increase of \$40.0 million in APN for the procurement of 24 LITENING ATPs for the F/A-18D aircraft.

Night targeting system upgrade

The budget request included \$307.5 million in Aircraft Procurement, Navy (APN), for UH-1Y utility and AH-1Z attack helicopters, but no funding for the procurement of night targeting system (NTS) upgrades. The current AH-1W NTS uses Generation I Forward Looking Infrared (FLIR) and requires an upgrade to the Generation III FLIR, which would significantly improve the ability of the AH-1W helicopter to fight at night and during low visibility conditions as well as improve reliability by replacing obsolete parts. The committee notes that the Commandant of the Marine Corps has identified additional funding for NTS upgrades on his unfunded priorities list. The committee recommends an increase of \$7.8 million in APN for the NTS upgrades, for a total authorization of \$315.3 million.

H-53 modifications

The budget request included \$14.9 million in Aircraft Procurement, Navy (APN), but no funding for engine air particle separators (EAPS) barrier filters nor for crash-attenuating crew chief seats for the H-53 series helicopter.

The current H-53 EAPS suffers heavy wear and tear from pre-flight and maintenance requirements. The Navy is conducting a trade study to develop conceptual barrier filter alternatives for the H-53 series of helicopters. The committee notes that the results of this effort will require non-recurring engineering to incorporate a new EAPS barrier filter type separator into the H-53 series heli-

copters. The committee understands that new EAPS will result in lower maintenance costs and improved engine performance.

The committee also understands that the procurement and installation of crash-attenuating seats for both pilots in the H-53 series helicopter is ongoing. However, the crew chief is not provided with a crash-attenuating seat. The committee notes the lack of crashworthy seats for crew chiefs exposes them to higher risk of injury or death in the event of a hard landing or crash. The Department of the Navy has programmed for the procurement of 222 crashworthy seats in fiscal year 2011. The committee believes that this safety issue needs to be addressed immediately.

The committee notes that the Commandant of the Marine Corps has identified additional funding for H-53 EAPS barrier filters and crash-attenuation crew chief seats on his unfunded priorities list. The committee recommends an increase of \$5.0 million for non-recurring engineering for EAPS barrier filters and \$6.5 million to procure 222 crash-attenuating crew chief seats, for a total authorization of \$26.4 million in APN.

SH-60 armed helicopter

The budget request included \$12.4 million in Aircraft Procurement, Navy (APN), for modifications to the SH-60 helicopter, including \$7.6 million for kits to arm the helicopter. Navy helicopters, stationed aboard aircraft carriers and surface combatants, are being used to support operations in the global war on terror. These operations include armed reconnaissance, and additional funding for kits is included on the Chief of Naval Operations' unfunded priorities list. The committee recommends an increase of \$7.6 million in APN for the procurement of additional armed helicopter kits.

EP-3 aircraft electronic attack

The budget request included \$55.1 million in Aircraft Procurement, Navy (APN), for modifications to the EP-3 aircraft. The EP-3 is a land-based, long-range aircraft, with electronic intercept devices for detection and tracking of enemy radars and communications. The EP-3 aircraft has been designated a high demand, low-density asset by the Joint Chiefs of Staff. Additional funding for USQ-146 communications electronic attack systems for the EP-3 aircraft has been requested on the Chief of Naval Operations' unfunded priorities list. The committee recommends an increase of \$13.0 million in APN for the procurement of USQ-146 electronic attack systems for the EP-3 aircraft.

P-3 aircraft modifications

The budget request included \$163.3 million in Aircraft Procurement, Navy (APN), for modifications to the P-3 aircraft, including \$11.9 million for the procurement and installation of anti-surface warfare improvement (AIP) program kits. AIP greatly expands the P-3 aircraft's capabilities to operate in the littorals with the addition of advanced technology sensors, expanded communications, upgraded weapon delivery capabilities, and improved operator situational awareness. The committee recommends an increase of \$7.0

million in APN for the procurement and installation of additional AIP kits for the P-3 aircraft.

Navy Weapons

AIM-9X captive air training missile

The budget request included \$37.9 million in Weapons Procurement, Navy (WPN), for the procurement of 165 AIM-9X Sidewinder short range air-to-air missiles, including \$7.2 million for the procurement of 44 AIM-9X captive air training missiles (CATM). The Sidewinder is the Navy and Marine Corps' primary short range air-to-air weapon, and the advanced capabilities of AIM-9X require a high level of aircrew proficiency. There is currently an inventory shortfall of AIM-9X CATMs to support three F/A-18E/F squadrons, and the procurement of additional AIM-9X CATMs is included on the Chief of Naval Operations' and the Commandant of the Marine Corps' unfunded priorities lists. The committee recommends an increase of \$7.6 million in WPN for the procurement of 46 additional AIM-9X CATMs.

Weapons industrial facilities

The budget request included \$4.1 million in Weapons Procurement, Navy (WPN), for various activities at government-owned, contractor-operated weapons industrial facilities, but included no funding for facilities restoration at the Navy Industrial Reserve Ordnance Plant, Allegany Ballistics Laboratory (ABL). Some of these facilities have exceeded their useful life and deteriorated beyond safe operations. The committee recommends an increase of \$20.0 million in WPN for the facilities restoration program at ABL.

Gun mount modifications

The budget request included \$84.1 million in Weapons Procurement, Navy (WPN), for modifications to gun mounts on naval ships, and included \$1.3 million for modifications to upgrade MK45 gun mounts to the Mod 4 configuration on guided missile destroyers. The MK45 gun is also used on Navy cruisers, and the Navy has a program to modernize its cruisers using this gun. The committee recommends an increase of \$14.0 million in WPN for upgrading cruiser MK45 gun mounts to the Mod 4 configuration.

Navy and Marine Corps Ammunition

M795 155mm high explosive cartridge

The budget request included \$5.2 million in Procurement of Ammunition, Navy and Marine Corps (PANMC), for the M795 155mm high-explosive cartridge. Additional funding for the M795 155mm high-explosive cartridge has been identified on the Commandant of the Marine Corps unfunded priorities list. The committee recommends an increase of \$15.0 million in PANMC for the M795.

Time fuze blasting igniter

The budget request included \$770,000 in Procurement of Ammunition, Navy and Marine Corps (PANMC), for the time fuze blasting igniter. The budget request will achieve 40 percent of the ap-

proved acquisition object (AAO) for this item. Additional funding for the time fuze blasting igniter has been identified on the Commandant of the Marine Corps unfunded priorities list. The committee recommends an increase of \$5.0 million in PANMC for the time fuze blasting igniter.

Shipbuilding

DD(X) destroyer program

The budget request included \$716.0 million in Shipbuilding & Conversion, Navy (SCN), for advance procurement for the DD(X) destroyer program. Of this amount, \$666.0 million is for advance procurement of the lead ship of the class, and \$50.0 million is for advance procurement of the second ship of the class. These advance procurement funds are required to procure material to maintain ship construction schedules and for transition to detail design efforts.

In fiscal year 2005, \$84.4 million was authorized and appropriated for the design and advance procurement requirements associated with construction of the second ship at an alternative second source shipyard. The committee recommends an increase of \$50.0 million in SCN to be used only for advance procurement of the second ship of the DD(X) class at the second shipyard.

DDG-51 Arleigh Burke-class destroyer modernization program

The budget request included no funding for the DDG-51 Arleigh Burke-class destroyer modernization program. Section 121 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375) required the Navy to submit a report on this modernization program, and authorized and appropriated \$50.0 million to initiate this program in fiscal year 2005. The report was delivered in March 2005, and shows the potential for significant reductions in the size of the crew through technology insertion. The plan outlined in the report is to implement the modernization initiatives on the last two ships of the class, DDG-111 and DDG-112, which will be delivered in fiscal year 2010, before beginning a backfit on the oldest ships of the class starting with DDG-51. The financial analysis shows that a life-cycle savings of \$712.0 million could be achieved if this plan is implemented, primarily due to reduced crew size, while also achieving the additional benefits of: (1) improved situational awareness; (2) increased survivability; (3) improved maintainability; (4) increased commonality; (5) eliminated obsolete parts; (6) improved training; and (7) improved quality of life.

The committee believes this program requires continued funding in the near-term for the modernization effort, and recommends an increase of \$25.0 million in Shipbuilding & Conversion, Navy, for the DDG-51 modernization program.

Other Procurement, Navy

High performance metal fiber brushes for shipboard motors and generators

The budget request included \$19.9 million in Other Procurement, Navy (OPN), for submarine support equipment, but included no funding for high performance metal brushes for shipboard motors and generators. Metal fiber brushes have demonstrated the capability to significantly enhance performance and reduce maintenance costs for motors and generators. The committee recommends an increase of \$4.5 million in OPN for the continuing procurement of high performance metal fiber brushes.

Items less than \$5.0 million

The budget request included \$134.0 million in Other Procurement, Navy (OPN), for shipboard equipment items of less than \$5.0 million.

The budget request included no funding for the advanced control monitoring system. This system will update older, analog style shipboard controls with modern software-based applications and sensors for enhanced control and observation of critical shipboard systems. The committee recommends an increase of \$4.0 million in OPN for the advanced control monitoring system.

The budget request included no funding for shaft lubricating pumps on the Landing Ship Dock 41/49 (LSD-41/49) class of amphibious ships. The current mechanical shaft seal pumps on these vessels are requiring maintenance at increasing costs. The committee is aware that the Navy could realize a return on investment within three years through the installation of canned lube pumps on three older LSD 41/49-class ships and on a submarine tender. The committee recommends an increase of \$4.0 million in OPN for the procurement and installation of canned lube pumps to replace the mechanical shaft seal pumps.

The budget request included no funding for modifications to aircraft carrier elevators. The existing aircraft elevator stanchion and platform lockbar systems are subject to corrosion, binding, and component failure. Replacement of these components with modern control systems would enhance aircraft carrier operations while reducing maintenance and manpower costs. The committee recommends an increase of \$5.7 million in OPN for a variety of aircraft carrier elevator modifications.

The committee recommends a total increase of \$13.7 million in OPN for shipboard equipment items of less than \$5.0 million, for a total authorization of \$147.7 million.

Littoral combat ship mission modules

The budget request included \$36.8 million in Other Procurement, Navy (OPN), for mission modules for the littoral combat ship (LCS). These mission modules will enable the LCS to operate in the littorals by providing capability in the mine warfare, small boat neutralization, and anti-submarine warfare missions.

The budget request did not include funding for a spare engine for the first ship of the class, which will use the MT30 marine gas turbine engine. If there were a main engine casualty after delivery of

the ship, much valuable time would be lost in the testing and validation of its concept of operations without a spare engine. The committee recommends an increase of \$8.6 million in OPN for a spare MT30 marine gas turbine engine for the LCS.

Submarine acoustic modernization installation

The budget request included \$226.9 million in Other Procurement, Navy (OPN), for submarine acoustics, which funds all future upgrades of acoustic-rapid commercial, off-the-shelf insertion (A-RCI) equipment. A-RCI is a multi-phased, evolutionary development effort to maintain acoustic superiority for in-service submarines. Additional funding for installation of A-RCI has been requested on the Chief of Naval Operations' unfunded priorities list. The committee recommends an increase of \$5.0 million in OPN for submarine acoustic modernization A-RCI installation.

Surface sonar dome window

The budget request included \$14.0 million in Other Procurement, Navy (OPN), for undersea warfare support equipment, including \$1.1 million for surface ship sonar domes and windows. The Navy has been developing a new design sonar dome based on a newer composite material. The first sonar dome using these materials failed under the extreme pressure test. The causes for this failure have been identified and the design modified. The committee recommends an increase of \$5.0 million in OPN for the surface sonar dome window.

Surface electronic warfare improvement program

The budget request included \$25.1 million in Other Procurement, Navy (OPN), for the procurement of AN/SLQ-32 electronic warfare equipment for surface ships. The AN/SLQ-32 consists of five configurations and performs the missions of early detection, analyses, threat warning, and protection from anti-ship missiles. The committee recommends an increase of \$5.0 million in OPN to accelerate procurement of AN/SLQ-32 equipment.

Weapons range support equipment

The budget request included \$46.6 million in Other Procurement, Navy (OPN) for the procurement of equipment to implement the Navy fleet training range instrumentation training plan, but included no funding for the continued procurement of the multi-spectral threat emitter (MTES) or the joint threat emitter (JTE).

The proliferation of lethal surface to air missiles and anti-aircraft artillery presents a clear threat to the warfighter. Threat emitters replicate the electronic signatures of these threats on training ranges. The committee recommends an increase of \$6.0 million for the procurement of MTES and an increase of \$6.0 million for the procurement of JTE, a total increase of \$12.0 million in OPN for weapons range support equipment.

Maritime domain awareness

The budget request included \$6.1 million in Other Procurement, Navy (OPN), for the naval fires control system. The committee is aware of the direction from the Secretary of Defense to prioritize

efforts to develop a capability that would provide maritime domain awareness similar to that provided for air traffic awareness. The committee believes that integration of existing systems could be used to aid in achieving this capability. The integration of the distributed common ground system for the Navy with joint harbor operation centers would assist in providing fused data to establish a common operating picture of coastal areas for both the Navy and the Coast Guard. The committee recommends an increase of \$5.0 million in OPN to prototype this capability for evaluation of its contribution to establishing maritime domain awareness.

Rolling airframe missile launcher system

The budget request included \$17.5 million in Other Procurement, Navy (OPN), for the rolling airframe missile (RAM) launcher system, but included no funding for the continued integration of the RAM with the close-in weapons system, known as SeaRAM. The Navy had originally planned to equip its guided missile frigates with this capability to provide a layered self-defense for the ships. The committee does not agree with the decision to discontinue the procurement of SeaRAM for the frigates unless there is another more capable system to provide defense. The committee recommends an increase of \$18.0 million in OPN to procure two SeaRAM systems for installation on guided missile frigates to evaluate its effectiveness.

NULKA anti-ship missile decoy

The budget request included \$40.4 million in Other Procurement, Navy (OPN), for the procurement of 12 NULKA anti-ship missile decoy systems and 31 NULKA decoys. The NULKA decoy is a quick reaction offboard electronic countermeasure to defeat advanced radar homing anti-ship missiles.

The committee is aware that the minimum sustaining rate for the production of NULKA decoys is 67 decoys a year, and that the procurement of additional NULKA decoys is requested on the Chief of Naval Operations' unfunded priorities list. Raising the procurement rate to the minimum sustaining rate would lower the unit cost from \$450,000 to less than \$250,000. The committee recommends an increase of \$9.0 million in OPN for the procurement of 36 additional NULKA decoys.

Submarine training device modifications

The budget request included \$31.8 million in Other Procurement, Navy (OPN), for submarine training device modifications, but included no funding for logic-based software to expand the distribution and capability of performance support systems (PSSs). The Navy is beginning to use these electronic PSSs to enhance training opportunities for deployed forces. The committee recommends an increase of \$4.0 million in OPN for integration of these PSSs across the fast attack submarine community.

Command support equipment

The budget request included \$60.8 million in Other Procurement, Navy (OPN), for command support equipment, but included no

funding to procure man overboard indicator (MOBI) systems or to improve the electronic military personnel records system (EMPRS).

The MOBI system provides devices, which are worn by sailors aboard ship, to allow rescue forces to respond quickly in the event a sailor falls overboard. The committee is aware that the Naval Safety Center has recommended to the Naval Sea Systems Command that MOBI systems should be deployed throughout the fleet. In the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005, the Senate report accompanying S. 2400 (S. Rept. 108–260) directed the Secretary of the Navy to submit a report to the congressional defense committees, with the submission of the fiscal year 2006 budget request, on plans to implement the Safety Center's recommendations. The committee has not yet received the report. The committee believes MOBI will not only save lives, but will also reduce the time spent searching for sailors who have fallen overboard. The committee recommends an increase of \$9.1 million in OPN to procure additional MOBI systems.

EMPRS is the Navy's personnel records management system that contains information on more than 3.8 million personnel. The committee recommends an increase of \$6.5 million in OPN for EMPRS to improve data storage and enhance information technologies, for a total increase in OPN of \$15.6 million for command support equipment.

Navy medical automated information technology insertion

The budget request included \$8.8 million in Other Procurement, Navy (OPN), for medical support equipment, which provides funding for the Fleet Hospital program whose mission is to provide comprehensive medical support to the fleet and fleet Marine forces engaged in combat operations. Automated information technology can be used to track medical materiel, surgical instruments, biomedical support equipment, and common support equipment for expeditionary medical forces consisting of deployable hospitals and hospital ships. The committee recommends an increase of \$3.0 million in OPN for Navy medical automated information technology insertion.

Marine Corps Procurement

Modification kits

The budget request included no funding in Procurement, Marine Corps (PMC), for weapons and weapon systems modification kits, but no funding for modification kits for the MK–19 grenade machine gun. Since the fielding of the MK–19, various enhancements have been developed that greatly improve the operational reliability, readiness, safety, and maintainability of the MK–19 weapon system. The committee recommends an increase of \$2.0 million in PMC for the procurement of MK–19 modification kits, for a total authorization of \$2.0 million in PMC.

Rapid deploying interoperable shelter systems

The budget request included \$952,000 in Procurement, Marine Corps (PMC), for unit operations centers, but no funding for the rapid deploying interoperable shelter system (RDISS). The core in-

infrastructure component of the Marine Expeditionary Force (MEF) command operations center (COC) is the RDISS together with associated power generation and environmental control equipment. The RDISS provides a rapidly deployable, easily set up, and dependable shelter for the conduct of command and control in a high intensity combat environment. A MEF urgent universal needs statement requested the development of a mobile, rapidly deployable, highly integrated MEF and division-level COC. The Marine Corps has procured COCs in fiscal year 2005, but requires additional funding to procure and integrate RDISS in support of the COC. The committee recommends an increase of \$4.8 million in PMC, for the RDISS and integration of RDISS into the COC, for a total authorization of \$5.8 million.

United States Marine Corps continuity of operations

The budget request included \$17.8 million in Procurement, Marine Corps (PMC), for communication/electronics infrastructure support, including \$3.4 million for the United States Marine Corps (USMC) Continuity of Operations (COOP) Program. The USMC COOP provides an additional layer of defense for Marine Corps' tactical computer networks. The committee notes that the Commandant of the Marine Corps has identified additional funding for the USMC COOP on his unfunded priorities list. The committee believes that the Marine Corps must improve its ability to protect Marine Corps' networks by increasing computer network storage, improving network security, and reducing the number of legacy networks. The committee recommends an increase of \$2.2 million in PMC, for the USMC COOP, for a total authorization of \$20.2 million in PMC.

Multiyear procurement authority for C-17 aircraft (sec. 131)

The committee recommends a provision that would authorize the Secretary of the Air Force to exercise the option on the existing C-17 multiyear procurement contract for the procurement of up to 42 additional C-17 aircraft, in accordance with section 2306b of title 10, United States Code. The existing multiyear procurement was authorized by section 131 of the National Defense Authorization Act for Fiscal Year 2002 (Public Law 107-107). The provision would require the Secretary of Defense, prior to the exercise of the contract option, to certify to the congressional defense committees that the procurement of these additional C-17 aircraft is consistent with the results of the Mobility Capabilities Study to be completed in fiscal year 2005.

Prohibition on retirement of KC-135E aircraft (sec. 132)

The committee recommends a provision that would prohibit the Secretary of the Air Force from retiring any KC-135E aerial refueling aircraft in fiscal year 2006.

Section 134(b) of the National Defense Authorization Act for Fiscal Year 2004 (Public Law 108-136) required that an analysis of alternatives (AOA) on meeting aerial refueling requirements be conducted and delivered to the congressional defense committees by March 1, 2004. In a letter to the congressional defense committees on February 24, 2004, the Acting Under Secretary of Defense for Acquisition, Technology and Logistics provided the guidance that will be used for the conduct of the AOA. On February 27, 2004, the Secretary of the Air Force sent a letter to the committee stating the AOA would be completed in fiscal year 2005.

The budget request included a plan to retire 49 KC-135Es in fiscal year 2006. The committee believes it is premature to retire any KC-135Es until the AOA is completed and the Secretary of Defense has presented to the congressional defense committees a comprehensive plan for the recapitalization and modernization of the aerial refueling fleet.

Use of Tanker Replacement Transfer Fund for modernization of aerial refueling tankers (sec. 133)

The committee recommends a provision that would allow the use of funds in the Tanker Replacement Transfer Fund, which was established by section 8132 of the Department of Defense Appropriations Act for Fiscal Year 2005 (Public Law 108-287), for the modernization of existing aerial refueling tankers, if the modernization of such tankers is consistent with the results of the analysis of alternatives for meeting the aerial refueling requirements of the Air Force, as required by section 134(b) of the National Defense Authorization Act for Fiscal Year 2004 (Public Law 108-136). The use of funds under this provision would be in addition to the use of funds for a tanker acquisition program. Activities that contribute to the modernization of existing aerial refueling tankers could include a variety of modifications and upgrades to KC-135E/R aircraft that are consistent with the analysis of alternatives for meeting the aerial refueling requirements of the Air Force.

Prohibition on retirement of F-117 aircraft (sec. 134)

The committee recommends a provision that would prohibit the Air Force from retiring any F-117 aircraft in fiscal year 2006. The committee budget request included a proposal to retire 10 F-117 aircraft. The F-117 remains the only stealthy tactical aircraft capable of delivering certain precision munitions currently in the inventory. The committee believes it is premature to retire any F-117 aircraft at this time.

Prohibition on retirement of C-130E/H tactical airlift aircraft (sec. 135)

The committee recommends a provision that would prohibit the Secretary of the Air Force from retiring any C-130E/H tactical airlift aircraft in fiscal year 2006.

The committee believes it would be premature to retire any C-130 aircraft until the results of the Mobility Capabilities Study, which is to be completed in fiscal year 2005, are known and intra-theater airlift requirements are determined.

Procurement of C-130J/KC-130J aircraft after fiscal year 2005 (sec. 136)

The committee recommends a provision that would require the Secretary of the Air Force to procure any C-130J/KC-135 aircraft after fiscal year 2005 through a negotiated contract under Part 15 of the Federal Acquisition Regulation (FAR), relating to the acquisition of items under a negotiated contract (48 C.F.R. 15.000 et seq.), including a multiyear contract for such aircraft continuing in force from a fiscal year before fiscal year 2006.

The Air Force designated the C-130J aircraft as a commercial item in 1995 on the basis that the aircraft was a modification of commercial C-130 aircraft configurations that had been certified by the Federal Aviation Administration. Section 4(12) of the Office of Federal Procurement Policy Act (41 U.S.C. 403) defines commercial items to include modified commercial items, as long as the modifications are either "minor modifications" or modifications of a type customarily available in the commercial marketplace. The Air Force designated the C-130J as a commercial item and determined that there would be a 95 percent commonality between the C-130J and the civilian commercial version of the plane and modifications from the commercial version would be minor.

However, the Department of Defense Inspector General has reported that the C-130J included features not customarily available in the commercial marketplace, such as aerial delivery (cargo and paratroop), defensive systems, secure voice communication, station keeping, night vision, imaging, and satellite communication. The Director, Operational Test and Evaluation has found that the combat delivery variant of the C-130J has more than 70 percent new development and system integration relative to commercial versions of the C-130.

The committee believes that the Air Force original decision to procure the C-130J as a commercial item unnecessarily limited cost oversight by the government by denying the government access to certified cost or pricing data from the manufacturer. The committee believes that an agreement to change the terms and con-

ditions of the existing C-130J contract from a commercial item contract to a standard defense contract is necessary to provide the government the oversight it needs to procure aircraft that are operationally effective and operationally suitable at a fair price.

The committee notes that the Air Force has announced its intent to renegotiate this contract to a FAR Part 15 contract. This provision is intended to support that decision.

Aircraft for performance of aeromedical evacuations (sec. 137)

The committee recommends a provision that would require the Secretary of the Air Force to procure aircraft for the purpose of providing aeromedical evacuation services to severely injured or ill personnel. The provision would require the aircraft to be capable of non-stop transatlantic flights, and be equipped with current aeromedical support facilities. The provision would ensure that the dedicated mission of the aircraft is aeromedical evacuation. The provision would authorize \$200.0 million to be appropriated for the procurement of up to two fully-equipped aircraft to perform the aeromedical evacuation mission.

Previously, the Air Force had dedicated C-9A aircraft for the aeromedical evacuation mission. The Air Force directed that all of these C-9A dedicated aeromedical evacuation aircraft be retired by 2004, and the last C-9A aeromedical evacuation mission in the continental United States was flown on August 11, 2003.

The committee has been informed by wounded military personnel that the use of organic cargo aircraft for medical evacuation has resulted in unnecessary suffering. The committee believes the large cargo and aerial refueling aircraft currently being used for aeromedical evacuation are not suited for the support of severely wounded or severely ill patients.

The committee has been informed by health care providers that they have had difficulty controlling pain experienced by wounded patients during the course of extended flights. Many victims of multiple injuries require highly sophisticated electronic monitoring equipment, some of which is incompatible with the electrical power source of the transport aircraft.

Increasingly the practice for victims of blast injury is to delay closure of major wounds until the patient arrives at a medical facility capable of providing tertiary care. Poor lighting, rapid changes in temperature, and differentials in atmospheric pressures are also of concern, particularly for those patients with traumatic head wounds. The committee believes that all of these concerns could be addressed by acquisition of dedicated aeromedical evacuation aircraft.

The committee recommends an increase of \$200.0 million in Aircraft Procurement, Air Force, for the procurement of up to two dedicated aeromedical evacuation aircraft.

Air Force Aircraft

F-15E procurement

The budget request included no funding in Aircraft Procurement, Air Force (APAF), for the procurement of F-15E attrition reserve

aircraft. The F-15E is a dual-role fighter designed to perform air-to-air and air-to-ground missions. The procurement of F-15E attrition reserve aircraft is included on the Air Force Chief of Staff's unfunded priorities list. The committee recommends an increase of \$65.0 million in APAF for the procurement of F-15E aircraft.

C-130J/KC-130 multiyear procurement restoration

The budget request included \$99.0 million in Aircraft Procurement, Air Force (APAF), but included no funding to procure C-130J tactical airlift aircraft and no funding for advance procurement. The budget request included \$1,092.7 million in Aircraft Procurement, Navy (APN), for the procurement of 12 KC-130J aerial refueling aircraft, but included no funding for advance procurement. The budget request would terminate the C-130J multiyear procurement (MYP) contract that was authorized by the Bob Stump National Defense Authorization Act for Fiscal Year 2003 (Public Law 107-314). In a May 10, 2005, letter to the Chairman of the Committee on Armed Services of the Senate, the Secretary of Defense indicated his intent to reverse his decision to terminate the C-130J multiyear contract because of contract termination costs. Additionally, the Secretary informed the Chairman in this letter that a budget amendment for fiscal year 2006 would not be required to accomplish this goal.

The committee does not agree that a budget amendment is not necessary. Since there is no new information from the Department of Defense on the funding profile and numbers of aircraft by variant for C-130Js in fiscal year 2006, the committee exercised its discretion concerning the proper mix of these aircraft. The committee recommends an increase of \$645.0 million in APAF for the procurement of nine C-130J tactical airlift aircraft, and \$90.0 million in APAF for C-130J advance procurement. The committee also recommends a decrease of \$781.0 million in APN, leaving sufficient funds for the procurement of four KC-130J aerial refueling aircraft, and an increase of \$46.0 million in APN for KC-130J advance procurement.

B-1 digital communication improvements

The budget request included \$13.5 million in Aircraft Procurement, Air Force (APAF), for post production support to the B-1 aircraft and \$132.5 million in PE 64226F for B-1 capability improvements, but included no funding for the procurement and installation of the B-1 digital communication improvement. The B-1 digital communication improvement program preserves critical combat capability by providing Demand Assigned Multiple Access (DAMA)-compliant satellite data access for responsive in-flight mission and target changes. The existing temporary Combat Track II (CTII) radios are not DAMA compliant and will lose satellite access after fiscal year 2007. Procurement of the B-1 digital communication improvement is included on the Air Force Chief of Staff's unfunded priorities list. The committee recommends an increase of \$18.0 million in APAF and an increase of \$8.0 million in PE 64226F for the procurement and installation of the B-1 digital communication improvement.

C-5 aircraft avionics modernization program

The budget request included \$71.1 million in Aircraft Procurement, Air Force (APAF), for modifications to the C-5 aircraft, including \$69.3 million to continue the C-5 avionics modernization program (AMP). AMP upgrades the C-5 cockpit, installs communications, navigation and safety/air traffic management equipment, and replaces unreliable cockpit avionics. To accelerate this program, the committee recommends an increase of \$20.0 million in APAF for C-5 AMP.

C-130E/H aircraft modifications

The budget request included \$185.7 million in Aircraft Procurement, Air Force (APAF), for the procurement of aircraft modifications to the C-130, including \$50.6 million for the procurement of Avionics Modernization Program (AMP) modifications and \$7.1 million for the procurement and installation of one C-130 Center Wing Box (CWB) with expired service life.

The AMP provides full Global Air Traffic Management and Navigation Safety compliant aircraft. The committee recommends an increase of \$12.0 million in APAF for the procurement of AMP for C-130E/H aircraft.

The CWB replacement increases the service life of the C-130. The Air Force has recently removed from service 30 C-130Es with CWBs whose service life has expired. Procurement of CWBs is included on the Air Force Chief of Staff's unfunded priorities list. The committee recommends an increase of \$37.7 million in APAF for the procurement of CWBs for C-130E/H aircraft, for a total authorization of \$235.4 million in APAF for the C-130E/H aircraft.

KC-135 global air traffic management

The budget request included \$88.8 million in Aircraft Procurement, Air Force (APAF), for modifications to the C-135 and KC-135 aircraft, including \$77.7 million for the procurement of Global Air Traffic Management (GATM) modifications. The GATM modification includes avionics upgrades, wiring interfaces, and associated preparation activities for added communications, navigation, and surveillance equipment needed for operations in oceanic airspace where there are reduced spacing requirements between aircraft. To accelerate this program, the committee recommends an increase of \$10.0 million in APAF for the procurement of additional KC-135 GATM modifications.

E-8C joint surveillance and target attack radar system reengining

The budget request included \$15.5 million in Aircraft Procurement, Air Force (APAF), for the procurement of aircraft modifications to the E-8C aircraft, but included no funding for reengining the E-8C aircraft.

The reengining of the E-8C would provide significant improvements in reliability and performance over current TF33-102C engines and also reduce total life cycle costs. The reengining of the E-8C aircraft is included on the Air Force Chief of Staff's unfunded priorities list. The committee recommends an increase of \$44.4 million in APAF for the procurement of non-recurring engineering ac-

tivities required to initiate a reengining program to install JT8D engines on the E-8C aircraft.

Advanced targeting pods

The budget request included \$644.2 million in Aircraft Procurement, Air Force (APAF), for the procurement of aircraft support equipment and facilities, including \$40.8 million for the procurement of advanced targeting pods (ATPs). The ATP will supplement and replace the current targeting pod with a new system that provides increased combat effectiveness across several mission areas. The LITENING ATP is currently in use by the Active Duty, Air National Guard, and Air Force Reserve Command. The Combat Air Force is over 100 ATPs short of the requirement to equip legacy aircraft, and the procurement of additional ATPs is included on the Chief of Staff of the Air Force's unfunded priorities list. The committee recommends an increase of \$96.6 million in APAF for the procurement of 66 additional LITENING ATPs.

Air Force Missiles

Minuteman III mods for propulsion replacement program

The budget request included \$672.6 million in PE 11213F, Missile Procurement Air Force (MPAF), of which \$289.7 million is for the Intercontinental Ballistic Missile propulsion replacement program. The committee notes that the Department of Defense's diversion of funds away from this program will result in procurement of fewer motors in fiscal year 2006, resulting in an inefficient rate of production with consequent cost increases. The committee further notes that this program is contained on the Chief of Staff of the Air Force's unfunded priorities list.

The committee recommends an increase of \$10.0 million in PE 11213F for MPAF to be used for the propulsion replacement program for the Minuteman III ICBM force.

Other Air Force Procurement

Halvorsen loader

The budget request included \$16.3 million in Other Procurement, Air Force (OPAF), for the Halvorsen loader, a state-of-the-art handler for off/on loading aircraft cargo. Currently, 44 Halvorsen loaders are supporting Operation Iraqi Freedom, seven Halvorsen loaders are supporting Operation Enduring Freedom, and eight were used to support tsunami relief operations. Additional funding for Halvorsen loaders is on the Chief Staff of the Air Force's unfunded priorities list. The committee recommends an increase of \$8.2 million in OPAF for the procurement of 12 Halvorsen loaders, for a total authorization of \$24.5 million.

The committee understands that the Future Years Defense Program calls for buying a total of 385 Halvorsen loaders. However, the Air Force could ultimately buy as many as 512 Halvorsen loaders, if the Air Force were to decide to replace all of the existing 25,000 pound class (25K) loaders in the force. Given that the Halvorsen loader is more capable and more easily maintained than the 25K loaders it is replacing, the committee encourages the Air

Force to review its procurement plans. If the Air Force were to decide to buy more Halvorsen loaders, the committee believes that the Air Force should investigate whether there might be significant savings achievable if the Air Force were to acquire those loaders under a multiyear procurement contract.

Distributed common ground system components

The budget request included \$1.5 million in Other Procurement, Air Force (OPAF), for Intelligence Communications Equipment, but did not include funding to continue fielding of the jumbo digital transit cased system (J-DTS) components of the distributed common ground system (DCGS).

J-DTS is a component of the DCGS architecture that enables users in remote locations to receive imagery and other intelligence information from a variety of intelligence collection platforms, including Global Hawk, Predator, and U-2 aircraft. In some cases, remote users are able to actually control the sensors on the intelligence platform. Fielding of J-DTS to additional Air Force intelligence squadrons will enable multiple units to participate in real-world intelligence operations on a daily basis; provide better training to more Air Force intelligence specialists; and reduce the high operational tempo on the limited number of intelligence squadrons currently equipped to receive intelligence information in remote locations.

The committee recommends an increase of \$12.5 million in OPAF, for Intelligence Communications Equipment, to field additional J-DTS equipment to Air Force intelligence squadrons.

Joint threat emitters

The budget request included \$36.1 million in Other Procurement, Air Force (OPAF), for combat training ranges, including \$17.5 million for joint threat emitters. The joint threat emitter (JTE) system simulates electronic combat signals and is designed to provide realistic electronic warfare training for pilots and aircrew members. The JTE replaces older, maintenance intensive threat emitters, and is specifically designed to allow for “spiral” upgrades to ensure future threats are quickly integrated into the system. JTE has proven to be an effective training tool to prepare pilots for combat. Additional funding for JTE is included on the Air Force Chief of Staff’s unfunded priorities list. The committee recommends an increase of \$4.5 million in OPAF for the accelerated procurement of joint threat emitters.

Advanced SEAL Delivery System (sec. 151)

The committee recommends a provision that would limit the availability of funds for advance procurement of a pressure hull and other long lead items associated with building the second Advanced SEAL Delivery System (ASDS) until 30 days after the Secretary of Defense certifies to the congressional defense committees that the Under Secretary of Defense for Acquisition, Technology and Logistics has made a favorable Milestone C decision regarding the ASDS program.

The ASDS is a miniature, combatant submarine being developed for the infiltration and exfiltration of naval special operations forces. Unlike current underwater delivery systems, ASDS would transport Navy SEALs over longer distances in a dry environment, enhancing the operators' ability to accomplish their mission once ashore.

Significant technical and cost growth problems have plagued this program since its inception. For the past six years, the committee has expressed increasing concern about the cost of this system and the significant performance shortfalls the program has exhibited. At the urging of the committee, the Department of Defense designated ASDS as an Acquisition Category I program in 2003, and is exercising milestone decision authority to assess the future of this program.

The first ASDS underwent an operational evaluation (OPEVAL), starting in April 2003, to determine the effectiveness and suitability of the boat for use in combat. The OPEVAL results were promising, but revealed significant performance shortfalls. As a result, the National Defense Authorization Act for Fiscal Year 2004 (Public Law 108-136) prohibited expenditure of advance procurement funds for items associated with the second ASDS until after a favorable Milestone C decision, and a detailed report from the Secretary of Defense. In the Fall of 2004, the Commander, U.S. Special Operations Command, in consultation with the Assistant Secretary of the Navy for Research, Development and Acquisition, conducted a major program review; requested a delay in the Milestone C review and related advance procurement until the first quarter of fiscal year 2006; indicated his desire and the willingness of the prime contractor to restructure the program to a firm, fixed-price contract for future boats; and established the requirement for an additional period of operational test and evaluation in the fourth quarter of fiscal year 2005, prior to a Milestone C decision.

The ASDS program has achieved some progress over the past year in addressing remaining technical challenges associated with development. Most acoustical challenges have been addressed and a plan has been developed to address the remaining issues. Problems associated with the current battery technology have been mitigated, and a new, more promising lithium-ion battery technology will be installed on the boat in May 2005. Structural and maintenance challenges associated with the tail assembly of the ASDS appear to have been resolved with the redesign of the tail section.

The requirement for an ASDS remains critical for our special operations forces. The Under Secretary of Defense for Acquisition, Technology, and Logistics will determine in the Milestone C review

if the current ASDS program meets operational requirements, whether the ASDS program should continue, and what contractual adjustments are warranted.

While encouraged by recent progress, the committee remains concerned about the technical challenges and cost growth that have occurred in the ASDS program. The Milestone C decision has been postponed until December 2005, following a final operational test and evaluation. The committee opposes the commitment of fiscal year 2006 advance procurement funding prior to a favorable Milestone C decision and a comprehensive report from the Secretary of Defense. The committee reiterates the requirement for the Secretary of Defense to notify the congressional defense committees of the results of the Milestone C decision on ASDS, and to include in his report: a detailed summary of the program's revised cost estimate and future cost estimates, as validated by the Cost Analysis and Improvement Group; a detailed acquisition strategy; and a plan to demonstrate realistic solutions to key technical and performance problems identified during testing and operations.

The provision would also direct the Comptroller General to review the adequacy of the final operational test and evaluation plan developed by the Navy, review the results of the operational test, and update the March 2003 Comptroller General Report (GAO-03-442), "Defense Acquisition, Advanced SEAL Delivery System Program Needs Increased Oversight."

The committee directs that no amount of the \$71.7 million authorized to be appropriated for advance procurement of ASDS in fiscal year 2006 be obligated or expended until after a favorable Milestone C decision, as certified to the congressional defense committees in the required Secretary report.

Defense-wide Programs

MH-47 infrared engine exhaust suppressor

The budget request included \$129.7 million in Procurement, Defense-wide (PDW), for Special Operations Forces (SOF), Rotary Wing Upgrades, but did not include funding to complete fielding of infrared engine exhaust suppressor sets for U.S. Army MH-47E/D (IES-47) special operations aircraft.

The MH-47 Chinook aircraft has proven to be a critical workhorse in the global war on terrorism, providing heavy lift, even at high operating altitudes. While a durable system, the MH-47 is vulnerable to heat-seeking weapons. Installation of infrared exhaust suppressors significantly reduces this vulnerability. U.S. Special Operations Command (SOCOM) has a requirement for 61 IES-47 sets to equip all MH-47E/D aircraft, plus four spares for a total of 65 sets. Currently, 45 sets are scheduled for procurement, leaving 20 sets yet to be funded. Fully equipping the MH-47E/D fleet is the highest priority of the Commander, SOCOM, for additional funding.

The committee recommends an increase of \$7.7 million in PDW, for SOF, Rotary Wing Upgrades, to complete fielding of the 20 remaining IES-47 sets.

Time delayed firing device/sympathetic detonators

The budget request included \$11.2 million in Procurement, Defense-wide (PDW), for Special Operations Forces (SOF), Ordnance Acquisition, including \$1.4 million for time delayed firing device/sympathetic detonators (TDFD/SYDET), but did not include enough funding to fully replenish the inventory, particularly with regard to having sufficient munitions to train new operators.

TDFD/SYDET is a time delayed detonating device that greatly enhances the capabilities and efficiency of SOF operators conducting offensive military operations. Sufficient supplies are required to ensure operators have the best possible detonators for actual missions and that the detonator is available to instructors training new SOF operators. TDFD/SYDET is one of the highest priorities of the Commander, U.S. Special Operations Command, for additional funding.

The committee recommends an increase of \$11.0 million in PDW, for SOF Ordnance Acquisition, to procure an additional 5,500 TDFD/SYDET units for SOF operators and trainers.

Multi-band inter/intra team radio

The budget request included \$69.9 million in Procurement, Defense-wide (PDW), for Special Operations Forces (SOF), Communications Equipment and Electronics, but did not include funding to complete fielding of the multi-band inter/intra team radio (MBITR).

The MBITR AN/PRC-148 radio system provides SOF teams the ability to communicate over a variety of frequencies utilizing a single handheld radio with embedded security. The MBITR replaces numerous fixed frequency radios and related batteries and replacement parts, resulting in a significant reduction in the combat load of SOF operators. Continued fielding of the MBITR radio system is one of the highest priorities of the Commander, U.S. Special Operations Command, for additional funding.

The committee recommends an increase of \$13.5 million in PDW, for SOF Communications Equipment and Electronics, to field an additional 1,131 MBITR radios to SOF operators.

Multi-band multi-mission radio

The budget request included \$69.9 million in Procurement, Defense-wide (PDW), for Special Operations Forces (SOF), Communications Equipment and Electronics, including \$1.4 million for the multi-band multi-mission radio (MBMMR) system, but did not include sufficient funding to enable fielding of this important communications capability to deploying SOF units.

The MBMMR radio system provides voice and data capability over a variety of frequencies, and can operate in local or satellite communications modes. This radio enables SOF teams to utilize one radio to communicate with a variety of military and other organizations and replaces the variety of radios currently needed to accomplish required communications responsibilities. Continued fielding of the MBMMR radio system is one of the highest priorities of the Commander, U.S. Special Operations Command, for additional funding.

The committee recommends an increase of \$16.5 million in PDW, for SOF Communications Equipment and Electronics, to field an additional 500 MBMMR radios to SOF teams.

Joint threat warning system

The budget request included \$16.3 million in Procurement, Defense-wide (PDW), for Special Operations Forces (SOF), Intelligence Systems, to begin procurement of the Joint Threat Warning System (JTWS), but the amount requested will only equip a small portion of special operations forces with this much improved threat warning capability for ground, air, and maritime forces.

The JTWS is a modular, lightweight ground signals intelligence system that can be mounted on a variety of SOF delivery platforms, providing threat warning, situational awareness, and enhanced force protection for SOF elements. JTWS is an evolutionary acquisition program that builds upon previous efforts to separately acquire similar warning systems for air, ground, and maritime applications. Accelerating the procurement of this capability is one of the highest priorities of the Commander, U.S. Special Operations Command, for additional funding.

The committee recommends an increase of \$12.0 million in PDW, for SOF Intelligence Systems, to procure additional ground, air, and maritime JTWS systems.

Rucksack portable unmanned aerial vehicle

The budget request included \$20.2 million in Procurement, Defense-wide (PDW), for Special Operations Forces (SOF), Small Arms and Weapons, for the rucksack portable unmanned aerial vehicle (RPUAV), but did not include enough funding to fully meet the operational needs of the Commander, U.S. Special Operations Command (SOCOM), for fiscal year 2006.

The RPUAV is a man-portable unmanned aerial vehicle system that can be transported, launched, controlled, and recovered by a single SOF operator. The RPUAV provides small SOF teams with an important reconnaissance, surveillance, and target acquisition asset, and greatly enhances their situational awareness and force protection. The RPUAV is one of the highest priorities of the Commander, SOCOM, for additional funding.

The committee recommends an increase of \$3.3 million in PDW, for SOF, Small Arms and Weapons, to procure an additional 19 RPUAV systems to meet fiscal year 2006 requirements.

Military mail screening equipment

The budget request included \$143.8 million in Procurement, Defense-wide (PDW), for the chemical/biological installation force protection program. The committee recommends an increase of \$10.2 million in PDW for the chemical/biological installation force protection program, to begin the procurement and fielding of chemical and biological agent detection and sampling equipment to establish a robust capability to screen military mail at 62 sites (three mail transfer centers, three distribution centers outside the continental United States, and 56 military post offices). This increase would also provide for augmentation of current laboratory analytical capability to provide the capacity necessary to process the increased vol-

ume of samples from the new sites. Additional analytical capability, supported by a robust quality assurance and quality control program, would maintain the current Chemical Biological Defense Program laboratory standard, which would ensure confidence in the sampling results from the additional sites.

Elsewhere in this report, the committee recommends a provision that would require the Secretary of Defense to promptly develop and implement a plan to ensure that mail within the military mail system is safe for delivery, to include the screening of all mail in order to detect the presence of biological, chemical or radiological weapons, agents or pathogens, or explosive devices. The committee recommends authorizing additional funding for this purpose in fiscal year 2006 to ensure that resources are available to begin implementation of the plan as soon as possible.

Automatic Chemical Agent Detector and Alarm

The budget request included \$258.3 million in Procurement, Defense-Wide (PDW), for contamination avoidance equipment. The requested funding supports the procurement of chemical and biological detection, warning and reporting, and reconnaissance systems, such as the Automatic Chemical Agent Detector and Alarm (ACADA). The committee notes that a number of Active Duty Army and National Guard units are deployed worldwide in support of military operations. These units must have the best possible defense against chemical threats. The committee recommends an increase of \$16.0 million in PDW to meet procurement shortfalls in fielding ACADA systems.

ITEMS OF SPECIAL INTEREST

Army multi-band inter/intra team radio system

The committee is concerned with the limited industrial capacity to produce and deliver large quantities of hand-held, secure Type-1 multi-band inter/intra team radio systems (MBITR) required for Operations Iraqi Freedom and Enduring Freedom. Currently, the Army has only one source for the MBITR radio. The committee believes that a second source for the acquisition of MBITR radios would address existing shortfalls, accelerate fielding, and ensure an ongoing supply of these critical systems.

The committee directs the Secretary of the Army to study the feasibility and the costs and benefits of providing for the participation of a second source in the production of MBITR radios. The Secretary will provide a report of this study to the congressional defense committees no later than March 1, 2006.

Cooperative engagement capability

In the statement of managers accompanying the Strom Thurmond National Defense Authorization Act for Fiscal Year 1999 (Public Law 105-261), the conferees directed the Secretary of the Navy to report to the congressional defense committees at least quarterly on interoperability problems among cooperative engagement capability (CEC) and other combat direction systems. The report was also to contain planned solutions.

The committee has recently received the 24th consecutive report on CEC and combat direction system interoperability. The committee is satisfied that the Navy is now well aware of the potential interoperability problems that this system was facing, and has developed plans and programs to manage the interoperability risks in the future. Therefore, the committee does not believe that the Secretary of the Navy should continue to report on the interoperability problems of CEC with combat direction systems.

F/A-22 aircraft

The budget request included \$3.2 billion in Aircraft Procurement, Air Force, for the procurement of 24 F/A-22 combat aircraft, and an increment of \$65.5 million in PE 27138F to procure one dedicated test aircraft, for a total of 25 F/A-22 Raptor aircraft.

The committee has been notified of the results of the dedicated initial operational test and evaluation (DIOT&E) that was conducted on the F/A-22. While the DIOT&E report determined the F/A-22 aircraft to be operationally effective in the air supremacy mission, the committee is concerned that the aircraft was determined to be not operationally suitable. One discrepancy of particular concern is the inadequate ground cooling for avionics in high temperature conditions. The committee believes this discrepancy must be corrected before the F/A-22 aircraft design could be considered stable. The committee also notes that tests to demonstrate the limited air-to-ground attack capability of the F/A-22 included in the current design were not conducted during the DIOT&E, but are scheduled for follow-on testing beginning in July 2005.

The committee notes that the situation with late delivery of F/A-22 aircraft addressed in previous years is improving, but the committee remains concerned that the program is still behind the original contract schedule.

The committee will continue to closely monitor developments with the testing and production deliveries of the F/A-22 aircraft.

Intra-theater airlift

The Department of Defense has not yet briefed the congressional defense committees on the results of the Mobility Capabilities Study (MCS). The Secretary of Defense directed that this study be accomplished to update the results of the Mobility Requirements Study for Fiscal Year 2005 (MRS-05), which was completed in fiscal year 2001. This update is required to address the new National Military Strategy. One component of the MCS is expected to be a review of intra-theater airlift capacity.

The committee believes that decisions on the modernization and recapitalization of the fleet of intra-theater airlift aircraft should be based on the results of the MCS. The committee directs the Secretary to submit a report to the congressional defense committees no later than December 1, 2005, that identifies the options available to meet any identified shortfalls in intra-theater airlift capacity. Before an option to start a new program to meet any intra-theater airlift shortfall is initiated, the committee directs the Secretary to ensure that an analysis of alternatives is conducted.

Littoral combat ship

The Navy recently completed construction of the experimental littoral craft and has been authorized to procure one flight 0 littoral combat ship (LCS). Funding for the second flight 0 vessel from the second contractor team is included in the fiscal year 2006 budget request. These ships were intended to provide experience upon which the Navy would base decisions on how to proceed with acquisition of flight 1 LCS vessels, now scheduled to begin in fiscal year 2008.

The original plan put forth by the Navy implied that the contracts for flight 1 vessels would be awarded competitively. The Navy now appears to be changing the acquisition approach to narrowing the selection of flight 1 proposals to a selection from between the two successful bidders for the flight 0 program. The committee understands that this could be the most convenient approach from an administrative standpoint, but is concerned that this would discourage other potential contractor teams from continuing work to mature concepts and technologies for potential implementation on later LCS vessels.

Therefore, the committee directs the Navy to report to the congressional defense committees at the same time as the submission of the fiscal year 2007 budget on its acquisition strategy for the flight 1 portion of the LCS program. That report should provide details on the testing and experimentation that the Navy intends to conduct prior to awarding the flight 1 contracts; the acquisition strategy for acquiring flight 1 vessels, including any reasons for having changed that strategy if it has changed; and the Navy's plans for transitioning technologies from other Navy research and development activities, with particular emphasis on technologies being developed in the DD(X) program that may be appropriate for applying to the LCS program.

Maritime prepositioning force, future

The committee is concerned about whether the concept of sea basing is technically feasible and fiscally prudent. The committee is also concerned that the requirement for sea basing has not been refined beyond a concept of operations. The premise for the requirement for the sea base is that access to ports or bases ashore may be denied, or that sea basing will reduce vulnerabilities of large logistics bases ashore. The sea base concept is that a large ground force can be assembled at sea, delivered on the surface and the air to an area of conflict, and subsequently sustained from the sea base. The Navy is touting the centerpiece of the sea base as being the Maritime Prepositioning Force, Future (MPF(F)). The Mission Need Statement for MPF(F) was approved by the Joint Requirements Oversight Council in May 2001, yet the Department of Defense is still trying to define key performance parameters. The budget request included \$66.3 million in PE 48042N for the purpose of developing enabling technologies for MPF(F).

Enabling technologies include landing platforms, ship-to-ship cargo transfer, automated cargo handling, underway replenishment in heavy seas, and others. The committee believes it is important to ensure these technologies can actually support the movement of supplies and equipment in heavy seas, at a rate that will actually

sustain a ground force engaged in combat, before the country makes large investments in MPF(F) ships.

The Navy has made a number of proposals in this budget request. One is to build only one surface combatant and one submarine a year through the years included in the Future Years Defense Program (FYDP). Another is to delay the completion of the first ship of the new class of aircraft carrier, the CVN-78, for the second time in two years. Finally, the Navy has proposed to reduce the force of active aircraft carriers from 12 to 11. In testimony before the Subcommittee on Seapower of the Committee on Armed Services, one witness who represented the shipbuilding industry stated that the single most important factor in controlling costs of ships was to offer program stability. Constantly changing budgets, acquisition strategies, and procurement profiles are as disruptive to maintaining cost and schedule stability as constantly changing technical requirements. The Navy's shipbuilding budget is already underfunded, and the addition of a new platform could only make the situation worse.

Section 1022(a)(1) of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 (Public Law 107-314) requires the Secretary of Defense to report to the Committees on Armed Services of the Senate and the House of Representatives that funding is adequate to support a 30 year shipbuilding plan, with a discussion of the necessary naval vessel force structure to meet the National Security Strategy of the United States or the most recent Quadrennial Defense Review. The Navy has submitted an interim 30 year shipbuilding plan, which does not yet appear to be endorsed by the Department, and does not appear to be fully funded in the FYDP. In written testimony before the Subcommittee on Seapower of the Committee on Armed Services, a Congressional Research Service analyst describes this plan in the following way: "The March 2005 report does not present a 30 year shipbuilding plan. Instead, it presents a 30 year projection of potential Navy force levels from which potential annual shipbuilding rates can be only partially inferred." The force structures in the Navy plan are for either 260 ships or 325 ships, both of which include MPF(F) ships, which are intended to enable the sea basing concept. While the committee recommends authorization of the budget request for \$66.3 million in PE 48042N for development of technologies for MPF(F), the committee believes that the Navy should not proceed to a shipbuilding program for MPF(F) before the requirements for MPF(F) are more refined, and that enabling technologies have demonstrated a high probability of achieving successful operations.

Transmission Enterprise Program

The committee notes that the Army has taken action to implement the Transmission Enterprise Program (TEP), an effort to stabilize U.S. combat vehicle transmission production, while continuing to meet needs driven by the Iraq war. The committee further notes that the fiscal year 2006 budget request included no funding specifically dedicated to the TEP. The committee commends the Army for its efforts to implement the program and encourages the Army to continue funding the TEP in fiscal year 2006.

TITLE II—RESEARCH, DEVELOPMENT, TEST, AND EVALUATION

Explanation of tables

The following tables provide the program-level detailed guidance for the funding authorized in title II of this Act. The tables also display the funding requested by the administration in the fiscal year 2006 budget request for research, development, test and evaluation programs, and indicate those programs for which the committee either increased or decreased the requested amounts. As in the past, the administration may not exceed the authorized amounts (as set forth in the tables or, if unchanged from the administration request, as set forth in budget justification documents of the Department of Defense), without a reprogramming action in accordance with established procedures. Unless noted in this report, funding changes to the budget request are made without prejudice.

NATIONAL DEFENSE AUTHORIZATION FOR FISCAL YEAR 2006
(Dollars in Thousands)

<u>Title II -- RESEARCH, DEVELOPMENT, TEST & EVALUATION</u>	<u>Authorization Request</u>	<u>Senate Change</u>	<u>Senate Authorized</u>
Research, Development, Test & Evaluation, Army	9,733,824	-17,000	9,716,824
Research, Development, Test & Evaluation, Navy	18,037,991	360,100	18,398,091
Research, Development, Test & Evaluation, Air Force	22,612,351	24,217	22,636,568
Research, Development, Test & Evaluation, Defense-wide	18,803,416	39,880	18,843,296
Operational Test & Evaluation	168,458		168,458
TOTAL RDT&E	69,356,040	407,197	69,763,237

Subtitle A—Authorization of Appropriations

Science and technology

The committee notes the critical role that investments in defense science and technology (S&T) and basic research play in developing the revolutionary military capabilities of the future. These programs also train the next generation of U.S. scientists, engineers, and technology entrepreneurs who will maintain complex weapons and defense systems and who will assist in solving future national security challenges. The committee remains concerned about the overall funding level for defense science and research. The committee notes that the fiscal year 2006 budget request for S&T is below the previous year's requested level. If in any year from fiscal year 2001 to 2009 the budget request for these research programs does not increase by 2 percent over inflation, the National Defense Authorization Act for Fiscal Year 2000 (Public Law 106–65) requires the Department of Defense to certify the impact of the S&T budget on national security and to initiate a Defense Science Board study assessing the impact of the proposed budget on defense technology and the national defense.

The committee notes that the recent National Research Council report entitled "Assessment of Department of Defense Basic Research" contained a number of findings and recommendations. The report found that "in real terms the resources provided for Department of Defense basic research have declined substantially over the past decade." The report also found that there has been a recent deemphasis on "unfettered exploration" in the basic research program, which "historically has been a critical enabler of the most important breakthroughs in military capabilities." The committee is troubled by the lack of support for real innovative work at the Department, which could have serious consequences for the development of necessary future military capabilities. Therefore, the committee recommends an increase of over \$30.0 million in the Department's basic research accounts.

The committee notes that the National Research Council report also made a number of recommendations to improve the execution of the basic research program. The committee directs the Secretary of Defense to provide a report to the congressional defense committees no later than March 1, 2006, which evaluates the National Research Council recommendations to improve the Department's basic research program, and details a plan and schedule for the implementation of appropriate recommendations.

Finally, the committee has provided increases in the S&T program to support specific focus areas in fiscal year 2006, including: close to \$50.0 million for unmanned systems; approximately \$63.0 million for power technology advances; nearly \$116.0 million for force protection, transformational technologies, and training innovations; \$42.0 million in manufacturing research and process technologies; over \$105.0 million to support counterterrorism efforts; and \$68.0 million for combat casualty care and military medicine, including a targeted \$40.0 million for prevention, mitigation, and treatment of blast injuries.

**Subtitle B—Program Requirements, Restrictions, and
Limitations**

**Contract for the procurement of Future Combat System
(sec. 211)**

The committee recommends a provision that would require the Secretary of the Army to ensure that the Future Combat System (FCS), including all projects and equipment that are a part of the FCS program, be developed and procured through a contract under the authority of Part 15 of the Federal Acquisition Regulation (FAR), relating to acquisition of items by negotiated contract (48 C.F.R. 15.000 et seq.) rather than through a contract under the authority of section 845 of the National Defense Authorization Act for Fiscal Year 2004 (Public Law 108–136, 10 U.S.C. 2371 note).

The committee has expressed concern regarding the Army's use of an "other transaction authority" (OTA) contract vehicle to manage the FCS program. The committee does not believe that the \$20.9 billion agreement entered between the Army and the Lead Systems Integrator for the FCS program is consistent with the language and intent of section 845 authority. Section 845 authority is intended to be used for limited prototype projects, particularly those in which the Department of Defense seeks to engage non-traditional defense contractors that may be averse to the requirements imposed by a standard Department contract.

The committee notes that the Army has announced its intent to renegotiate this contract to a FAR Part 15 contract. This provision is intended to support that decision.

**Joint field experiment on stability and support operations
(sec. 212)**

The committee recommends a provision that would require the Secretary of Defense to conduct a joint field experiment focused on the transition from major combat operations to stability and support operations required to restore security, provide for immediate humanitarian needs, and begin the reconstruction activities necessary to assist a host nation in achieving self-sufficiency. The committee expects that responsibility for the conduct of the joint field experiment would be delegated to the Commander, U.S. Joint Forces Command.

Recent experience in Iraq and Afghanistan has highlighted the importance of planning and training U.S. personnel to prepare for the conduct and support of stability operations in post-conflict situations. The Defense Science Board 2004 Summer Study entitled "Transition to and from Hostilities" identified the challenges the United States will face in its future stabilization and reconstruction efforts, and offered recommendations for enhancing U.S. effectiveness across the spectrum of activities from peacetime through stabilization and reconstruction. These recommendations focused on management discipline and on building and maintaining certain fundamental capabilities, now lacking, that are critical to success in stability and support operations.

In response to recent experience and the Defense Science Board study, the Secretary is taking steps to place greater emphasis on the stability operations mission in the Department of Defense plan-

ning and guidance so that the mission is fully integrated across all Department of Defense activities. The committee commends the initiative the Secretary has taken to date and urges him to continue to give this effort a high priority, to include sufficient resources, senior-level management attention, and outreach efforts to other agencies and departments of the U.S. Government who play important roles in stability and support activities.

The committee notes the establishment within the Department of State of the Office of the Coordinator for Reconstruction and Stabilization whose mission is to lead, coordinate, and institutionalize U.S. Government civilian capacity to prevent or prepare for post-conflict situations; and to help stabilize and reconstruct societies in transition from conflict or civil strife, so these societies can reach a sustainable path toward peace, democracy, and a market economy. The committee commends the Department of Defense's active support of and cooperation with this new office in the Department of State, and urges the Department of Defense to continue to deepen its coordination with the Department of State on planning for and participating in post-conflict stability operations and reconstruction efforts.

The committee believes that a joint field experiment will provide valuable insights for the Department of Defense as it endeavors to integrate stability and support operations into mainstream military operations and doctrine. The committee is concerned, however, that the Department of Defense is only one element of stability and support activities in the post-conflict environment. The committee strongly urges the participation of other departments and agencies of the U.S. Government, as well as coalition partners, in both the conduct of the joint field experiment and the formulation of recommendations to ensure that a comprehensive U.S. Government and coalition approach to future stability and support activities is developed.

The committee directs that costs associated with the conduct of this joint field experiment shall be paid from the amount authorized to be appropriated for joint experimentation, PE63727N, in fiscal year 2006.

Subtitle C—Ballistic Missile Defense

One-year extension of Comptroller General assessments of ballistic missile defense programs (sec. 221)

The committee recommends a provision that would extend until fiscal year 2007 the requirement for the Comptroller General to provide an assessment of the extent to which the Missile Defense Agency achieved the goals established for that fiscal year for each ballistic missile defense program of the Department of Defense. The provision would also modify the submittal date from February 15 to March 15 to provide additional time to complete this requirement.

Fielding of Ballistic Missile Defense Capabilities (sec. 222)

The committee recommends a provision that would authorize the use of funds, authorized to be appropriated for fiscal year 2006 or 2007 for research, development, test, and evaluation for the Missile

Defense Agency, for the development and fielding of ballistic missile defense capabilities.

Plans for test and evaluation of operational capability of the ballistic missile defense system (sec. 223)

The committee recommends a provision that would direct the appropriate joint and service operational test and evaluation components of the Department of Defense, in coordination with the Missile Defense Agency, to prepare a plan to test, evaluate, and characterize the operational capability of block 2006 and subsequent blocks of the ballistic missile defense system. Each plan prepared under this provision shall be appropriate for the level of technological maturity of the block to be tested, and shall be subject to the review and approval of the Director of Operational Test and Evaluation (DOT&E). Additionally, DOT&E shall provide a report at the conclusion of testing for each block of the ballistic missile defense system containing an assessment as to whether or not such testing was adequate to evaluate the operational capability of the block and a characterization as to the operational effectiveness, suitability, and survivability of the block capability, as appropriate for the level of technological maturity of the block to be tested.

Subtitle D—High-Performance Defense Manufacturing Technology Research and Development

High performance defense manufacturing technology research and development (sec. 230)

The committee recommends a set of provisions that would require the Under Secretary of Defense for Acquisition, Technology and Logistics to identify advanced manufacturing processes and techniques whose utilization would result in significant productivity and efficiency gains in the defense manufacturing base. The provision would direct the Under Secretary to pursue the development of innovative manufacturing processes and advanced technologies and to facilitate the creation of extended production enterprises, which leverage information technology and innovative organizational models.

In addition, the provision would direct the Under Secretary to take appropriate actions, such as establishment of agreements with relevant Department of Defense components, including the Joint Defense Manufacturing Technology Panel, to accelerate transition of transformational processes and technologies from science and technology to the defense manufacturing base. The provision would also direct the Under Secretary to develop and implement a set of activities to continuously identify and utilize improvements in innovative manufacturing processes and to diffuse best practices to industry. This may include taking steps to identify incentives for adoption of manufacturing advances in the industrial base.

Finally, to ensure that technology efforts in industry are well coordinated with future defense technology requirements, the Under Secretary may initiate one or more technology roadmapping exercises. These roadmaps would be developed jointly with industry, and would plan the development and adoption of manufacturing processes and technologies needed for future defense capabilities.

Subtitle E—Other Matters**Expansion of eligibility for leadership of Department of Defense Test Resource Management Center (sec. 241)**

The committee recommends a provision that would eliminate the requirement that the director and the deputy director of the Defense Test Resource Management Center be selected by the Secretary of Defense from among current and former civilian and military employees of the Department of Defense. Under this provision, candidates should be chosen based on their experience with test and evaluation programs regardless of employment history with the Department.

Technology transition (sec. 242)

The committee recommends a provision that would clarify the role of the Technology Transition Council, which was established in the Bob Stump National Defense Authorization Act for Fiscal Year 2003 (Public Law 107–314) to provide advice and assistance to the manager of the Technology Transition Initiative. The provision would stipulate the duty of the council to support the Undersecretary of Defense for Acquisition, Technology and Logistics in the development of policies to facilitate the rapid transition of technologies from the science and technology base into acquisition programs. The Council would provide advice and support to all technology transition efforts. The provision would require the Secretary of Defense, working through the Technology Transition Council, to submit a report to the congressional defense committees outlining a strategy for technology transition and detailing the impact of internal Department of Defense processes and regulations on technology transition efforts. The report would also make recommendations for improvement of technology transition and for elimination of any identified impediments. The report shall be submitted with the fiscal year 2007 budget request.

The committee is concerned that the council has been focused on one transition program, and has not met at the principal-level frequently enough to provide advice and leadership on technology transition programs across the Department. The committee believes the council should meet at least semi-annually at the principal-level, if it is to adequately fulfill its mission.

The budget for technology transition has grown by 23 percent in the last four years. During this same time period, the Department created additional programs to rapidly field new capabilities and equipment. Test and evaluation has been accelerated to accommodate immediate needs. Taken together, these developments underscore the importance of an active, senior Technology Transition Council. Senior leadership attention should focus on ensuring success of these technology transition programs, identifying and overcoming barriers to utilization of the most innovative solutions and recommending any needed policy direction for the test and evaluation process.

Prevention, mitigation, and treatment of blast injuries (sec. 243)

The committee recommends a provision that would require the Secretary of Defense to designate a senior official as the executive agent to coordinate and manage a joint service comprehensive blast injury prevention, mitigation, and treatment program. The provision would require review and assessment of a coordinated, department-wide research effort to include: blast characterization; modeling and simulation of safe stand-off distances; “detect and defeat” capabilities; and armor design and material testing for blast, ballistic, and fire protection. The provision would also require design of a comprehensive flexible armor system and support for emerging military medical technologies, devices, and treatments specific to blast injuries.

The provision would require the executive agent to:

- (1) conduct studies of blast injury, with an emphasis on traumatic brain injury;
- (2) develop improved clinical treatment and diagnostic protocols;
- (3) develop integrated treatment approaches for service members who suffer multiple injuries from blast;
- (4) conduct three or more pilot projects to study the incidence in returning soldiers of traumatic brain injury;
- (5) develop protocols for medical tracking of members for up to five years following blast injury; and
- (6) refine and improve educational interventions for blast injury survivors and their families.

It is the committee’s intent that the Departments of Defense and Veterans Affairs’ Head Injury Project at Walter Reed Army Medical Center lead clinical and diagnostic services required by this provision.

The provision would also require: (1) the establishment of a training program for medical and non-medical personnel on the prevention, mitigation, and treatment of blast injuries intended to improve field and clinical training on early identification of blast injury; and (2) the expansion of treatment programs, including those at the Departments of Defense and Veterans Affairs’ Brain Injury Center, intended to enhance the evaluation and care of members of the Armed Forces with consequence of blast injury, especially traumatic brain injury.

The provision would further require the Secretary to submit a report to the congressional defense committees by February 15, 2007. The report would include: (1) a description of Department of Defense activities and efforts to improve the prevention, mitigation, and treatment of blast injuries; (2) a consolidated budget presentation on these programs; (3) a description of capability gaps in addressing blast injuries; (4) an explanation of collaborative work with other agencies, departments, and governments; (5) a description of efforts to disseminate blast injury research and treatment efforts; and (6) an update on the development status of comprehensive personnel protection systems.

The committee notes the change in historical patterns of wounding in the global war on terrorism due to the proliferation of blast weapons. High velocity gun shot wounds, once the predominant

cause of military casualties, represent less than 10 percent of wounds today. Advances in military medicine, protective equipment, and highly successful training efforts have led to the highest survival rates in military history, making treatment and care, especially for new or poorly understood injuries, important.

Over one-third of all U.S. injuries in Operation Iraqi Freedom and close to half of fatalities are the result of blasts. Multiple site injuries from blasts are common. Over 60 percent of head and neck injuries are the result of blasts. The committee believes it is time to focus attention and resources on a coordinated approach to addressing the blast threat from the beginning—pre-detonation defeat—through the end—full understanding of blast injuries and appropriate diagnosis, treatment, and care.

The committee recommends an increase of over \$40.0 million in targeted research, development, test and evaluation program elements for accelerated work specific to confronting blast injury prevention, mitigation, and treatment challenges. The committee also recommends an increase of \$20.0 million in the Defense Health Program to facilitate expansion of clinical trials, treatments, and studies required by this provision.

Army basic research

The budget request included \$137.9 million in PE 61102A, for defense research sciences. The committee is concerned with the long term viability of the defense research program, especially those efforts geared at developing innovative solutions to address emerging and future challenges. Ongoing work in the areas of materials and composites for flexible armor, neuroscience, textiles with embedded sensors, efficient vehicle operations, and basic terrain analysis modeling and simulation are a few of the many research examples that contribute to meeting the needs of the warfighter. The committee recommends an increase of \$12.5 million in PE 61102A for expansion of Army basic science, including \$2.5 million for research in brain imaging deception detection; \$2.0 million for moldable fabric armor to increase force protection options; \$2.0 million for functionally integrated reactive surface technologies to develop protective, intelligent, and adaptive textiles; \$2.0 million to enable transition of low temperature vehicle research; \$3.0 million for desert terrain analysis research; and \$1.0 million for advanced ground vehicle reliability research.

Document exploitation

The budget request included no funding for Research, Development, Test, and Evaluation, Army, for Security Defense Research Sciences, in PE 61102A, for development of advanced document exploitation equipment.

Portable, rugged document exploitation equipment is currently not widely available to military personnel operating in deployed, austere environments. The technology exists to develop lightweight equipment that can scan documents, quickly search for important information in native languages, and transmit potentially valuable documents back to exploitation facilities quickly, thus providing battlefield commanders with rapid exploitation of captured information. Recent experiences in Afghanistan and Iraq have demonstrated the value of such capabilities and the requirement for additional, improved capabilities.

The committee recommends an increase of \$5.0 million in PE 61102A, to continue development, product improvement, and fielding of portable document exploitation systems.

Army university research

The budget request included \$82.0 million in PE 61104A, for university and industry research centers. Significant advances in materials technologies, materials processing, and secure communications require continued fundamental research to serve as the building blocks for Army future combat systems. The committee recommends an increase of \$6.5 million in PE 61104A for university research, including \$2.0 million for strategic defense systems manufacturing technology basic research; \$2.5 million for expanded continuation of the nanotubes optimized for lightweight exceptional strength composite project; \$2.0 million for integrated systems in sensing, imaging, and communications research to provide secure optical connections.

Advanced mine detection and blast mitigation

The budget request included \$17.6 million in PE 62105A, for materials technology. Army materials research efforts in blast resistant structures, composites, and the equipment to test them contribute to immediate and long term force protection needs. The committee recommends an increase of \$5.0 million in PE 62105A for expansion of promising materials technology research, including \$3.0 million for advanced mine detection and blast mitigation and \$2.0 million for lightweight blast containment vessel development, improved computational simulation capabilities, and early testing of optimized vessel designs.

Army small airship

The budget request included \$32.1 million in PE 62120A, for sensors and electronic survivability. Asymmetric threats and unpredictable battlefields increase the importance of sensors in spotting and preventing hostile action and in targeting assets. An adaptive, modular, autonomous vehicle capable of operating in a variety of environments and performing various functions during a single mission should provide the warfighter with an important stand off tool.

The committee recommends an increase of \$3.0 million in PE 62120A to provide focused attention on solving some of the technical challenges involved in autonomous control, adaptability between tethered and untethered flight, and load exchange for a small airship surveillance system.

Detection and neutralization of improved explosive devices

The budget request included \$32.1 million in PE 62120A, for sensors and electronics survivability and \$49.5 million in PE 62782N, for mine and expeditionary warfare applied research. The Department of Defense is pursuing a broad short and long term research effort to confront the threat posed by improvised explosive devices (IEDs). Substantial achievements made in the areas of sensors, jammers, and pre detonation devices support current operations. As efforts continue to move solutions to the field as quickly as possible, an additional avenue of exploration is underway to invent more comprehensive tools for IED neutralization. Many IEDs are remotely initiated using inexpensive commercial electronics. These control mechanisms may all be subject to a low level of electricity leakage, which could be detected at a considerable distance with special equipment.

The committee supports the Department's efforts to explore alternative and imaginative approaches to combating the IED threat in the long-term. The committee recommends an increase of \$2.0 million in PE 62120A to accelerate development of an innovative remote sensor monitoring technology designed to lead to a mobile test bed for advanced stand-off detection of explosives. The committee further recommends an increase of \$3.0 million in PE 62782N for development of a field prototype detection and neutralization device.

Real-time laser threat warning development

The budget request included \$19.1 million in PE 62270A, for electronic warfare technology. The Army supports key goals in the area of battlespace survivability and acquisition of enemy targets under this account. The ability to detect heat seeking missiles and those guided by lasers with real-time location of the laser source and identification of the source characteristics would enhance missile countermeasure efforts. The committee recommends an increase in PE 62270A of \$4.0 million to continue development of a prototype to field test a high performance, low cost laser threat warning and missile countermeasure system utilizing MEMS-based beam steering technology.

Army unmanned systems initiative

The budget request included \$62.5 million in PE 62303A, for missile technology. As use of unmanned aerial vehicles increases, integration tools, testing processes, and training procedures must keep pace. The committee recommends an increase of \$5.0 million in PE 62303A for an unmanned systems initiative and expanded testing of unmanned vehicles and teams of vehicles during long, autonomous flights. The program would also develop airspace management procedures for vehicles with different payloads, and would provide joint training for control of vehicle weapons assignments and on the use of communication protocols.

Technology enhancement for area protection

The budget request included \$62.5 million in PE 62303A for missile technology. The committee is aware that the Army has identified the enhanced area air defense system (EAADS) as the key element in defending against rockets, artillery and mortars, as well as unmanned aerial vehicles and cruise missiles. While the Army continues to develop radar elements to support EAADS, the committee is aware of the need to evolve the systems integration tools and technologies necessary to operate a comprehensive battlefield system to address the threat.

The committee recommends an increase of \$5.0 million in PE 62303A for the enhanced area protection and survivability science and technology program to develop technologies to be integrated into force protection systems to support EAADS requirements, as well as near-term force protection for Operation Iraqi Freedom.

Multifunctional robot platform

The budget request included \$16.0 million in PE 62308A, for advanced concepts and simulations. Various robotic platforms with force protection applications under development by the Army show promise in addressing sniper, mortar, and rocket propelled grenade threats. The committee recommends an increase of \$3.0 million in PE 62308A for rapid integration of optical technology and advanced acoustic detection and direction finding hardware into the robot enhanced detection outpost with lasers platform (RedOwl).

Combat vehicle and automotive technology

The budget request included \$64.9 million in PE 62601A, for combat vehicle and automotive technology. Component technologies

explored under this account support the Army's current and future combat and tactical vehicle fleets. Present engine systems fail to provide adequate measurement and data retrieval necessary to increase engine efficiency, resulting in faster fuel burn rates.

The committee recommends an increase of \$3.5 million in PE 62601A for development of advanced electric drives designed to result in easily replaceable, quiet, robust engines with greater power density and torque.

The committee further recommends an increase of \$6.0 million in PE 62601A to address the needs of the Department of Defense for alternative fuels and fundamental research on robotic ground vehicles. Specifically, the committee recommends increases of \$3.0 million for a defense transportation energy research project focused on military use of advanced fuels; and \$3.0 million for unmanned vehicle control technologies to increase control, vision, and navigation systems in robotic ground vehicles.

Gun barrel coatings

The budget request included \$49.2 million in PE 62618A, for ballistics technology. Gun barrel wear accounts for nearly 80 percent of annual armament costs. Hard ceramic coatings such as titanium nitride could increase the wear and the life of such armaments by as much as five to eight times over current processes, with a projected proportionate reduction in armament costs. The committee recommends an increase of \$2.0 million in PE 62618A for the development of hard, wear-resistant coatings for the inside surfaces of gun barrels.

Active coatings technology

The budget request included \$37.8 million in PE 62624A, for weapons and munitions technology. Selected research in the areas of advanced, adaptable armor and coatings to protect personnel and equipment from ballistic and blast threats is approaching the testing phase. The committee recommends an increase of \$3.5 million in PE 62624A for research and development of longer lasting, cost-effective coatings that adapt to conditions in real-time.

Sonic rarefaction wave gun technology

The budget request included \$37.8 million in PE 62624A, for weapons and munitions technology. The Army's plan to acquire lighter, faster, more expeditionary vehicles affects requirements for vehicle-mounted weapons systems. The committee recommends an increase of \$2.5 million in PE 62624A for the rarefaction wave gun. This gun shows potential for 50 percent weight and heat reductions and 75 percent reduced recoil while at the same time maintaining current muzzle energy.

Ultra wideband sensors

The budget request included \$37.8 million in PE 62624A, for weapons and munitions technology. Today's military faces battlefields in neighborhoods, small towns, and cities as often as in open deserts, forests, or jungles. Advanced sensors and imaging resolution combined with unmanned platforms make possible extended visibility and situational awareness. One current challenge to

achieving full battlespace awareness involves through-the-wall sight. The committee recommends an increase of \$2.0 million in PE 62624A for advanced research on a hand-portable through-wall radar system.

Army man-portable power

The budget request included \$39.6 million in PE 62705A, for electronics and electronic devices. The Army needs battery systems to deliver reliable, lightweight, constant and, when needed, high surge power, especially for the dismounted soldier. The zinc air battery system has the potential to provide at least twice the energy density as other battery systems and up to 4 times or more the high discharge or constant power rate as common battery systems.

The committee recommends an increase of \$8.0 million in PE 62705A for accelerated advances in man-portable power, including \$3.0 million to develop prototype designs for the zinc air battery; \$2.0 million for a portable solid oxide fuel cell power generation demonstrator capable of using JP-8 fuel; and \$3.0 million for a hybrid advanced soldier power system that, when coupled with device-specific adapters, would power existing and legacy gear for 72-hour autonomous missions.

Flexible Display Initiative

The budget request includes \$39.6 million in PE 62705A, for electronics and electronic devices, including \$5.0 million, for the Flexible Display Center. Equipment, materials, and technology on flexible displays and microelectronics facilitate creation of next generation communication products, which are key to the Army's transformation efforts. The Army's planned funding for flexible display research is insufficient for the manufacturing capability necessary to support the Army's stated goals for displays and does not include a tools and materials component. The competitively bid, peer-reviewed Flexible Display Initiative achieves a 62 percent industry cost share in leveraging the Army's research funding. The committee recommends an increase of \$4.0 million in PE 62705A for the Flexible Display Initiative to undertake additional materials and manufacturing technology projects aimed at ensuring the Army meets flexible display goals in a timely manner.

Ultra wideband chipset

The budget request included \$21.8 million in PE 62782A, for command, control, and communications technology. The Army invested in ultra wideband radio technology with the potential to provide extremely covert communications platforms, situational awareness, and through-wall and ground penetrating radar. The developed technology, which is compatible with, but not dependent on current and future communication systems, requires transition funds for integration and pre-production prototyping. The committee recommends an increase of \$2.0 million in PE 62782A for transition of the ultra wideband radio frequency chipset to meet Army power consumption, range, and bit rate requirements.

Biosecurity research for food safety

The budget request included \$21.7 million in PE 62786A, for warfighter technology, but no funding for food security and safety monitoring capabilities. The Army must protect the U.S. military's food supply and associated supply chain infrastructures. Technologies to rapidly and reliably detect food contaminants would positively impact soldier health, performance, and effectiveness. The committee recommends an increase of \$2.5 million in PE 62786A for development of methods and equipment to detect real-time biohazards in the food supply.

Army medicine for mitigation and treatment of blast injuries

The budget request included \$74.7 million in PE 62787A, for medical technology and \$45.2 million in PE 63002A, for medical advanced technology. Care for uniformed personnel, including adaptation to changing wound patterns and long-term quality of life for injured combat veterans, are key priorities for the committee and are the focus of a Blast Injury Prevention, Mitigation, and Treatment Initiative under section 243 of this Act.

The committee recommends a series of increases in PE 62787A and PE 63002A to advance emerging, life saving medical technologies and to accelerate testing, trials, and production of new devices and treatments. Specifically, the committee recommends project increases in PE 62787A totaling \$9.8 million and in PE 63002A totaling \$18.0 million for the following projects.

Under PE 62787A, the committee recommends:

- (1) \$2.6 million for a biofoam bleeding sealant for battlefield trauma for further development of existing protein hydrogel technology and acceleration of approval to field the product to forward surgical teams;
- (2) \$1.2 million for non-linting silver antimicrobial wound dressing technology that would combine infection protection and fluid transport over a period of days for use in forward locations or in the event that medical care is not readily available;
- (3) \$2.0 million for the hemorrhage control (Chitosan) dressing, to support an Army unfunded need to conduct research on internal application of the bandage;
- (4) \$1.0 million for warfighter face and eye injury protection and a two-year accelerated development process to test performance of a new composite face shield; and
- (5) \$3.0 million to augment Army work in characterization of armor for blast, ballistic, and fire protection.

Under PE 63002A, the committee recommends:

- (1) \$3.0 million for advanced tissue engineering techniques to rapidly deploy replacement blood vessels and other tissues, which have been demonstrated to form new cell layers in a matter of hours, compared to days or weeks under current treatments;
- (2) \$2.0 million for advances in solid treatment regeneration and the science of regenerative medicine to explore novel approaches to restoration of biological function after injury and the science of tissue engineering, cellular therapies, bio-sur-

gery, and artificial and bio-hybrid organ devices to reduce mortality and morbidity from battlefield injuries;

(3) \$4.0 million for acute care of blast effects and head injuries including a focused effort on research and data collection specific to blast injuries involving concussions and persistent symptoms;

(4) \$3.0 million for accelerated research and approval of forward use of recombinant activated factor VII by medics at the point of injury to greatly increase survival times prior to surgery;

(5) \$1.0 million for the advanced development of the composite warfighter face and eye protection;

(6) \$2.0 million for applied emergency hypothermia research to support innovative suspended animation and delayed resuscitation treatment directed at saving those severely injured in combat; and

(7) \$3.0 million for continued development of the fibrogen bandage.

Bio-defense detection and treatment

The budget request included \$74.7 million in PE 62787A, for medical technology and \$45.2 million in PE 63003A, for medical advanced technology. The Army needs easy-to-use devices to reliably detect the presence of bio-warfare agents. Upon detection and identification, the Army also requires new medicines to protect military personnel from biological agents. The committee recommends an increase of \$3.0 million in PE 62787A for accelerated research and development of a colorimetric biosensor device that would provide deployed units with a rapid, one-step, disposable bacterial pathogen detector.

The committee further recommends an increase of \$2.0 million in PE 62787A for enhanced research on a bio-defense gene knockout technology designed to enable treatment and prevention regimes against bio-warfare agents. The proposed technology would improve current, single-agent defenses and would counter agents possessing drug resistant or other bio-engineered features.

Finally, the committee recommends an increase of \$5.0 million in PE 63002A for bio-defense medical technologies; \$3.0 million for expansion of research to apply alternative vaccine delivery technologies to combination treatments against anthrax, plague, toxic shock, and botulism; and \$2.0 million for continued research and timely clinical trials on the surgical wound disinfection and biological agents project.

Posttraumatic stress disorder diagnostic tools

The budget request included \$74.7 million in PE 62787A, for medical technology. Accurate and timely diagnosis of posttraumatic stress disorder (PTSD) supports recovery and a higher quality of life for combat veterans. Additional basic research, early clinical trials, and development of predictive tools lead to accurate identification of PTSD conditions and would assist medical personnel in distinguishing posttraumatic stress from traumatic brain injuries. The committee recommends an increase of \$1.0 million in PE 62787A for PTSD research.

Surgical safety system

The budget request included \$74.7 million in PE 62787A, for medical technology. One of many areas of exploration for improved combat medical care involves advanced information technologies for remote monitoring and improved patient management in deployed surgical environments. The committee recommends an increase of \$2.0 million in PE 62787A for the surgical safety system to support goals of the Army's Operating Room of the Future concept.

Human operator performance research

The budget request included \$45.2 million in PE 63003A, for medical advanced technology. Soldiers confront numerous risk factors and toxic agents present in military environments. The committee recommends an increase of \$3.0 million in PE 63003A for a program to assess, develop, and advance computer-based testing technologies. The resulting diagnostic capabilities would determine human reactions to proposed toxic agent treatments and countermeasures.

Wireless and digital medical improvements

The budget request included \$45.2 million in PE 63002A, for medical advanced technology, but no funding for acceleration of wireless capabilities and records digitization. The use of wireless networks and computerized medical files reduces time spent by military medical personnel in processing, accessing, and updating medical records. Development of a wireless, adaptable network would accelerate accurate and efficient patient care, reduce errors, and facilitate transfer of medical records.

The committee recommends an increase in PE 63002A of \$1.4 million for a pilot program to implement use of wireless medical records at Walter Reed Medical Center. The committee further recommends increases of \$1.0 million in PE 63002A for the untethered healthcare project and development of technologies to facilitate remote triage and improve casualty status and assessment and \$2.0 million for expanded diagnosis through digital imaging recognition. This research will produce digitally accessible files to help attending physicians accelerate the diagnosis and treatment of service members in-theater and in medical care facilities.

Reconfigurable tooling systems

The budget request included \$48.3 million in PE 63003A, for advanced aviation technology. Many Army aircraft and unmanned aerial vehicles contain components composed of fiber-reinforced materials. When these parts require repair, delays in maintenance and availability of replacements adversely affect readiness. The committee recommends an increase of \$2.0 million in PE 63003A for completion of a portable, reconfigurable tooling system capable of creating the specific repair tools and aviation composite materials at the maintenance site.

Rotorcraft system monitoring

The budget request included \$48.3 million in PE 63003A, for aviation advanced technology. Helicopters play an important role in support, relief, and combat missions throughout the world. Timely

improvement of maintenance techniques, procedures, and automatic optimized digital engine controls are critical to supporting the increased use of and reliance on these platforms. The committee recommends an increase of \$5.5 million in PE 63003A, including \$1.5 million for integrated rotorcraft system monitoring and \$4.0 million for the universal control-full authority digital engine control project.

Unmanned tactical combat vehicles

The budget request included \$48.2 million in PE 63003A, for aviation advanced technology and \$82.5 million in PE 63114N, for power projection advanced technology, but no funding for a prototype unmanned combat aerial vehicle designed specifically for emergency rapid response. The committee is aware of the near-term requirement for a cost-effective, survivable, tactical unmanned combat aerial vehicle (UCAV) capable of reaching conflict areas in a timely manner, engaging and destroying targets of opportunity, providing overhead coverage at trouble spots, such as roadside ambushes, and operating without runways or launch mechanisms. The committee recommends an increase in PE 63003A of \$7.9 million and in PE 63114N of \$1.0 million to address this requirement through construction of two proof of principle Excalibur demonstrators.

Mid-range munition

The budget request included \$74.9 million in PE 63004A, for weapons and munitions advanced technology, including \$10.0 million for the mid-range munition. The committee recommends an increase of \$6.0 million in PE 63004A to accelerate development of the mid-range munition to meet targeted prototyping, demonstration, and fielding time frames.

Nanotechnology manufacturing

The budget request included \$74.9 million in PE 63004A, for weapons and munitions advanced technology. Research efforts to produce composite structures and new materials constructed from the nano-scale for weapons, munitions, and fire control applications will require unique, efficient manufacturing processes. The committee recommends an increase of \$3.0 million in PE 63004A for nanotechnology manufacturing.

Abrams track improvement

The budget request included \$142.9 million in PE 63005A, for combat vehicle and automotive advanced technology. The Army strives to reduce life cycle costs and maintenance requirements while increasing reliability for mission critical hardware such as the Abrams tank, even as operations in current theaters tax mechanical limits. The committee recommends an increase of \$3.0 million in PE 63005A for production and qualification testing of a new Abrams track, which could reduce life cycle costs by 20 percent while increasing reliability, availability, and maintainability of the component and the equipment.

Combat vehicle advanced development

The budget request included \$142.9 million in PE 63005A, for combat vehicle and automotive advanced technology. The committee recommends an increase of \$26.0 million in PE 63005A for the expanded development of automotive technologies in support of Army transformation goals for a lighter, more lethal force with heightened security and survivability. Specifically, the committee recommends increases of: \$4.0 million for advanced thermal management; \$2.0 million for a collaborative approach to a non-line-of-sight cannon and mortar; \$3.0 million for a composite armored cab; \$2.0 million for fastening and joining research; \$2.0 million for power electronic systems research; \$5.0 million for hydraulic hybrid vehicle technology; \$2.0 million for next generation nontactical vehicle propulsion; \$3.0 million for solid oxide fuel cell materials and manufacturing; and \$3.0 million for an anti-ballistic windshield armor designed for rapid installation, better operator visibility, and higher levels of projectile protection.

Coordinated training

The budget request included \$6.8 million in PE 63007A, for manpower, personnel, and training advanced technology. The Army is working to ensure that the “human component” of warfighting keeps pace with the transformation in systems, weapons, equipment, and requirements. Development of more effective collective training methods, which include a standardized program to capture the latest lessons learned from current combat operations, would reduce the time required for training and practicing critical new skills. The committee recommends an increase of \$3.0 million in PE 63007A for continued development of the battle command team training program and incorporation of realistic, relevant, and timely practice events for use by commanders and battle staff.

Advanced simulated training

The budget request included \$20.0 million in PE 63015A, for next generation training and simulation systems. The joint fires and effects training system typifies leading edge simulator technology currently in use. The committee commends the Army for its innovative approach to highly immersive and successful training and simulation environments. Realistic training has been credited in part with a reduction in casualty rates as troops preparing for deployment learn from those who are in theater or who are just returning.

The committee recommends an increase of \$3.5 million in PE 63015A for development of additional, deployable modules for the joint fires and effects training system. The committee further recommends an increase of \$3.5 million in PE 63015A for the final phase of the CAVE automatic virtual environment project to produce a fully self-sustaining visualization laboratory in support of environmental science research and military training for desert conditions.

Explosive demilitarization

The budget request included \$9.9 million in PE 63103A, for explosive demilitarization technology. The Army supports programs

under this account to develop safe, efficient, environmentally-compliant technologies to enhance existing methods for munitions resource recovery, recycling, and treatment. The committee recommends an increase of \$1.0 million in PE 63103A for development of a demilitarization approach that incorporates an innovative solid fuel feed technology with a modified reactor.

Alternative fuel supplies

The budget request included \$6.3 million in PE 63125A, for combating terrorism technology development. Adequate, reliable, and cost-efficient fuel supplies are important for military operations in changing environments with logistical supply chain challenges. Portable, alternative fuel systems continue to offer possible long-term solutions, if successfully configured to meet military requirements. The committee recommends an increase of \$4.0 million in PE 63125A for continued development of advanced mobile microgrid fueler systems to demonstrate innovations in converting biomass to synthetic gas or synfuel. The advanced fueler system would complement the ongoing Army Advanced Mobile Microgrid program, and would provide a reduced logistical footprint when deployed and backup power in case of grid failure.

Stryker vehicle active protection system demonstration

The budget request included \$70.1 million in PE 63313A for missile and rocket advanced technology development, including \$5.0 million for integration of the close-in active protection system (CIAPS) into the High Mobility Multipurpose Wheeled Vehicle (HMMWV), but no funding for CIAPS integration into a Stryker vehicle. In fiscal year 2005, the Army demonstrated that a prototype CIAPS mounted on a light armored vehicle could defeat rocket propelled grenades (RPGs). The committee supports any initiative that fields systems that provides additional force protection capabilities to our troops. HMMWVs and Stryker vehicles deployed to Operation Iraqi Freedom require RPG protection. The committee understands that the need and opportunity for integrating CIAPS technology on Stryker emerged after planning for the fiscal year budget request was completed. The committee recommends an increase of \$12.0 million in PE 63313A for a Stryker active protection system, for a total authorization of \$82.1 million in PE 63313A.

Advanced structures and composites

The budget request included \$7.3 million in PE 63734A, for military engineering advanced technology. Early in a military deployment, the majority of military personnel live in soft shelters or tents. In current conflicts, nearly every position is vulnerable to attack. The Army is exploring lightweight, affordable, rapidly deployable, forward construction methods that provide ballistic protection. The committee recommends an increase of \$3.0 million in PE 63734A to accelerate solutions that employ hybrid wood and advanced fiber material and structure systems to combine cost efficiency, ease of assembly, and ballistic protection.

Army command and control visualization system

The budget request included \$14.6 million in PE 63305A for Army system integration (non space), but no funding for interactive modeling and simulation management capabilities.

The committee notes that effective modeling and simulation is necessary for the development of missile defense and other military capabilities. Next generation architectural solutions for command and control and situational awareness are now being developed. The committee recognizes that funding could be used to mature technology and continue to combine government furnished components and commercial, off-the-shelf products to support the warfighter from the classroom to the field.

The committee recommends an increase of \$3.0 million in PE 63305A to support continued development of interactive modeling and simulation management capabilities of the Army Space and Missile Defense Command to support the warfighter.

Interactive modeling and simulation management

The budget request included \$14.6 million in PE 63305A for missile defense systems integration, but no funding for interactive modeling and simulation management capability.

The committee notes that effective modeling and simulation is essential to the development of missile defense and other military capabilities. Likewise, a process to coordinate and manage activities related to the verification and validation of modeling and simulation tools is needed to support these capabilities.

The committee recommends an increase of \$2.0 million in PE 63305A for development of technologies and processes to support verification and validation of modeling and simulation.

Next generation interceptor materials

The budget request included \$14.6 million in PE 63305A for Army missile defense system integration, but no funding for next generation interceptor (NGI) materials research.

Next generation ballistic missile interceptors will be designed to intercept longer range and more complex threats. To intercept complex threats, lightweight and highly maneuverable kill vehicles are required. The NGI materials research program proposes developing both a lightweight composite missile launcher and an advanced composite kill vehicle airframe. The Department of the Army and the Missile Defense Agency has assessed this item to have high military value.

The committee recommends an increase of \$5.0 million in PE 63305A for next generation interceptor materials research for development of lightweight composite missile launchers and advanced composite kill vehicle airframes.

Long loiter sensor and communications platform

The budget request included \$9.3 million in PE 63308A for Army missile defense system integration, but no funding for near-space long loiter sensor and communications.

The Army currently maintains a fleet of unmanned aerial vehicles (UAVs) that utilize Air Force space-borne sensors and communications devices to provide direct surveillance and reconnaissance

support to the warfighter in theater. The committee understands that a near-space long loiter craft able to continually view the entire theater of operations could provide significant operational cost savings by decreasing the numbers of UAVs and other sensors necessary for reconnaissance, surveillance, and blue force tracking.

The committee recommends an increase of \$5.0 million in PE 63308A to refine the requirements, conduct concept evaluations, and develop integrated test beds to assess the capabilities of programs related to sensor payloads for near-space long loitering craft.

Architecture Analysis Program

The budget request included \$81.0 million in PE 63327A for air and missile defense system engineering, but no funding for the Air, Space, and Missile Defense Architecture Analysis Program (A3P).

A3P is a modeling and simulation effort to assist in the systems analysis of air, space, and missile defense capabilities to provide an effective defense against cruise missiles, unmanned aerial vehicles, aircraft, rockets, artillery, and ballistic missiles of all ranges. The committee recognizes that these simulation capabilities are necessary to support air, space, and missile defense efforts across a broad spectrum of military operations from major theater wars to homeland security.

The committee recommends an increase of \$2.0 million in PE 63327A for A3P to support air, space, and missile defense modeling and simulation.

Single Integrated Space Picture

The budget request included \$83.1 million in PE 63327A for Air and Missile Defense Systems Engineering, of which \$15.0 million is for the Single Integrated Space Picture (SISP) program.

SISP is an initiative within the Combatant Commanders Integrated Command and Control System program to provide an integrated picture of space capabilities, threats, and operations. The committee notes that the Army Missile and Space initiative has included work to develop decision support software for use by space operators in support of joint operations center commanders. The software is designed to receive and integrate information from multiple sources, providing a consolidated picture to improve space situational awareness. The committee recommends an addition of \$2.0 million in PE 63327A for the continued development, production, and field demonstration of this software.

Casting Emissions Reduction Program

The budget request included \$5.17 million in PE 63779A for environmental quality technology demonstration/validation, but no funding for the Casting Emissions Reduction Program (CERP). The CERP is validating advanced materials and processes for the reduction of hazardous emissions from foundry operations, advancing emission measurement methods for the Department of Defense and related industries, and is supporting lightweight metals technology transfer to fulfill military requirements. The committee recommends funding CERP to continue to improve manufacturing technologies used to produce casting materials such as aluminum

and titanium to assist the Army in achieving its goal of becoming a lighter, more highly-mobile fighting force.

The committee recommends an increase of \$6.2 million in PE 63779A for the CERP.

Advanced Army medical systems

The budget request included \$10.1 million in PE 63807A, for medical systems advanced development. The committee recommends an increase of \$4.5 million in PE 63807A to accelerate deployment of medical treatments to mitigate blast injuries. Specifically, the committee recommends an increase of \$1.0 million for an Army requirement to pursue approval of the intravenous fluids warming system; \$2.5 million to produce a safe, portable oxygen system for patients during evacuations; and \$1.0 million to extend the shelf life of red blood cells by 6 weeks.

Joint Tactical Radio System

The budget request included a total of \$923.7 million for the Joint Tactical Radio System (JTRS) development across the Department of Defense. JTRS is intended to provide seamless, real-time communications among warfighters—through voice, data, and video—within and across the services through software programmable radio technology. Service requirements are “clustered” so that similar requirements can be met with a single acquisition effort. The lead service for each acquisition effort serves as the cluster manager. The Army is the manager for JTRS clusters 1 and 5 radios; the Special Operations Command is the manager for cluster 2 radios; and the Navy and Air Force are the managers for cluster 3 and 4 radios, respectively. In March 2005, the Department restructured the JTRS program to include a new Joint Program Executive Office (PEO), which will coordinate JTRS development.

The budget request included \$156.7 million in PE 64280A, for JTRS waveform development and Program Management Office (PMO) activities; \$393.1 million in PE 64805A, including \$375.0 million for JTRS cluster 1 and JTRS cluster 5 hardware development; and \$23.5 million in PE 64201A for JTRS aviation hardware development and integration. This funding supports Army JTRS responsibilities as the Joint Program Management Office and clusters 1 and 5 manager.

The committee has supported the JTRS program in the past and continues to believe that a software programmable radio is achievable despite the technical challenges associated thus far with JTRS program development. However, the committee is concerned about recent events regarding JTRS.

- a. The program faces a 30-month delay due to a JTRS hardware redesign to meet National Security Agency certification requirements.

- b. On January 14, 2005, the Deputy Under Secretary of Defense for Acquisition, Technology and Logistics, issued a partial “stop work” order to the JTRS cluster 1 contractor so that the contractor could focus the program on the early operational assessment of the program’s maturity and capabilities.

- c. On April 25, 2005, the JTRS cluster 1 contractor was issued a “show cause” letter indicating the JTRS program

would be terminated in 30 days unless the contractor could satisfactorily answer questions regarding cost, performance, and schedule.

The committee believes that the stop work and potential contract termination actions will require a significant amount of time for resolution and will require a JTRS program restructure or rebaseline. Therefore, the committee recommends a decrease of \$39.4 million in PE 64280A for a total authorization of \$117.3 million; a decrease of \$193.9 million in PE 64805A for cluster 1 and cluster 5 radio development to reflect a “stop work” order; and a decrease of \$75.0 million in PE 64805A for cluster 1 radio development, for a total authorization of \$124.2 million for PE 64805A, including \$106.1 million for JTRS cluster 1 and JTRS cluster 5 hardware development.

The Department of Defense Appropriations Act for Fiscal Year 2005 (Public Law 108–287) appropriated \$111.5 million for the procurement of JTRS cluster 1 radios, originally intended to be procured under a low rate initial procurement contract for a first quarter fiscal year 2007 multi-service operational test and evaluation. Based on recent events, these funds cannot be executed as appropriated. The committee encourages the Department of Defense to request reprogramming of fiscal year 2005 JTRS procurement funding into PE 64280A to continue development of the JTRS waveform and common operating environment and architecture so as not to affect the development and fielding of other JTRS clusters. The committee is concerned that the Department has not placed sufficient emphasis and funding on developing new antenna technologies and should make this a priority when the JTRS program is restructured.

Tactical vehicle modifications

The budget request included no funding in PE 64642A, for light tactical wheeled vehicle development. The Army’s current operation tempo demands that advances in lightweight materials, advanced load handling, intelligent control systems, ballistic protection systems, embedded diagnostics, and suspension systems be developed and spiraled into the field as soon as possible. The committee recommends an increase of \$5.0 million in PE 64642A for the research and development of spiral technologies for the wheeled tactical vehicle fleet, for a total authorization of \$5.0 million.

Future tactical truck system

The budget request included \$3.4 million in PE 64622A, for family of heavy tactical vehicle development, which conducts system development and demonstration of heavy tactical vehicles to support combat and combat support missions.

The budget request included \$1.0 million in PE 62601A, for the Future Tactical Truck System (FTTS). The committee understands that a key enabler of the Army’s tactical wheeled vehicle strategy is the Expedited Modernization Initiative Procedure process, an initiative designed to identify and use industry’s investments in advanced technologies. The EMIP process will be conducted in parallel with the FTTS Advanced Concept Technology Demonstration (ACTD) that will assess key technologies and emerging service

sustainment concepts to help develop the requirements for Army and Marine Corps trucks of the future, as well as to identify advanced technologies that also address current tactical wheeled vehicle needs. The committee recommends an increase of \$10.0 million in PE 64622A for the FTTS ACTD, for a total authorization of \$13.4 million.

Protected simulation and test link

The budget request included \$288.8 million in PE 64869A for Patriot/MEADS combined aggregate program, but no funding for the protected simulation and test link (PSTL).

The United States is currently engaged in a cooperative developmental effort with Germany and Italy to modernize the Patriot/MEADS missile defense system. Current United States technology protection rules dictate that simulation models associated with critical U.S. technology not be released to foreign partners. The committee notes that PSTL is a software application that will provide the capability for protected simulation models to interact with those models that can be shared with international partners, thereby facilitating the design and development of the Patriot/MEADS system as an international joint venture.

The committee recommends an increase of \$1.0 million in PE 64869A for PSTL.

Unmanned aerial vehicle ice protection

The budget request included \$10.9 million in PE 64258A, for target systems development. As unmanned aerial vehicles (UAVs) fly further, longer, and higher, they confront some of the same challenges as manned aircraft. The committee supports programs designed to address current in-flight icing protection shortfalls with low-weight, low-cost, low-power options made specifically for installation on current and future UAV configurations. The committee recommends an increase of \$3.0 million in PE 64258A for fabrication and testing of a self-activated, automatic deicing system for UAVs.

High performance computing research

The budget request included \$32.3 million in PE 65803A, for technical information activities. Use of computer simulation tools allows for the rapid analysis of alternative designs for armor, structures, specialized weapons, and aircraft components. Faster and more accurate modeling of potential structural improvements and composite material performance could lead to stronger and more flexible force protection systems for personnel and equipment. The committee recommends an increase of \$6.0 million in PE 65803A for advances in high performance computing research and improved simulations to evaluate the blast resistance of structures and armor.

Retinal/iris multimodal biometrics technology for secure identification

The budget request included \$22.9 million in Research, Development, Test, and Evaluation, Army, in PE 33140A, for Information Systems Security Program, but included no funding for continued

research on retinal/iris multimodal biometrics (RIMB) technology for secure identification.

RIMB technology has shown promise as an enhanced form of secure identification to protect information systems from unauthorized users. The committee recommends an increase of \$1.0 million in PE 33140A, for the continued development of RIMB technology, consistent with the short- and long-term technology development, deployment, and integration goals of the Department of Defense for biometric identification systems.

Army manufacturing technologies

The budget request included \$68.5 million in PE 78045A, for end-item industrial preparedness activities. As the Army continues to transform to a flexible, expeditionary force, logistical support for existing systems must be maintained and improved. Methods and processes designed to ensure sustained operational capability of weapons and support systems must move into the “virtual” world as many original parts and maintenance suppliers no longer exist. The Army can not afford to cope with manpower and time drains imposed by long logistical chains. The committee recommends an increase of \$2.0 million in PE 78045A, to support the virtual parts program, which will form a one-stop virtual engineering production environment to assist in ensuring the sustained operational capability of weapons and support systems.

The committee further recommends an increase of \$10.5 million in PE 78045A, to accelerate packaging, processing, and manufacturing systems. Specific precision manufacturing requirements exist on turbine engines, which use advanced alloys and ceramic materials that conventional machine techniques and tools fail to process. The committee recommends an increase of \$3.5 million for the super-pulse laser processing technology. The committee recommends an increase of \$4.0 million for the manufacturing system demonstration, and \$3.0 million for packaging and interconnection technology to reduce the weight and cost of electronic and optoelectric subsystems and for the adaptation of emerging technologies.

And finally, the committee notes that the strength-weight ratio of titanium makes it an ideal material for use in Army manned ground vehicles. The committee recognizes that this material also poses challenges as it is difficult, time consuming, and expensive to process. The committee recommends an increase of \$4.5 million in PE 78045A for accelerated development of an advanced modeling technology for titanium machining. Use of advanced software to simulate a virtual machining environment could enable increased processing speeds and deeper cuts, resulting in faster production of titanium parts to meet Army requirements for survivable manned ground vehicles.

Navy university research

The budget request included \$75.9 million in PE 61103N, for university research initiatives. The committee is concerned with the low priority placed on long-term research on naval sciences by the Department of Defense. The development of faster, more efficient, and durable systems for the naval environment requires increases in targeted research on multifunctional advanced composites, innovative sensors technology, advanced engineered materials, and blast resistant composites. These research projects have the potential to address current threats by providing energy absorbing ship hulls, blast resistant grid and foam stiffened structures, and advanced remote sensing at higher resolutions. Additional basic science in the pursuit of breakthroughs at the intersection of engineering, computer science, and neuroscience shows promise in providing seamless control of unmanned systems.

The committee recommends an increase of \$8.0 million in PE 61103N for university basic defense research, including \$2.5 million to accelerate exploration of multifunctional materials; \$2.5 million for advanced remote sensing; \$1.0 million for blast and impact resistant composites; and \$2.0 million for neural engineering for human-machine interfaces.

Navy science and technology outreach

The budget request included \$15.5 million in PE 61152N, for In-House Laboratory Independent Research, which supports intramural Navy research and efforts to revitalize the workforce for key science and technology capabilities. As many future military systems continue to increase in technological complexity, a robust workforce with discipline-specific scientific skills and knowledge is necessary. The Navy's special needs in areas such as ocean sciences, advanced materials, and electronics will be met through the participation of current Navy laboratory personnel in training and mentoring the next generation of scientists and engineers. Training researchers and innovators is a long-term project requiring near-term attention.

The committee recommends an increase in PE 61152N of \$3.0 million to support continuation of a pilot program—Naval Research Science and Technology for America's Readiness (N-Star). N-Star leverages the resources and expertise available in Navy facilities to engage and mentor students who have science and engineering aptitude and interests.

Free electron laser

The budget request included \$94.4 million in PE 62114N, for power projection applied research, including \$10.0 million for directed energy and the free electron laser. The committee recommends an increase of \$5.0 million in PE 62114N for accelerated research and development of high power free electron laser (FEL) devices based on the successful demonstration of high power FELs using energy recovered from the super-conducting accelerator technology. The Navy identified free electron lasers as a possible future directed energy weapon for the defense of Navy assets.

Littoral and undersea security

The budget request included \$101.7 million in PE 62123N, for force protection applied research. Navy ships and infrastructure are vulnerable to attack from suicide divers and other asymmetric hazards. Existing systems to detect and defeat such threats require constant monitoring and fixed installations. Research programs exploring alternatives, such as high frequency passive acoustic arrays and special cameras and sensors, have the potential to provide automatically monitored, easily constructed, portable, and reliable systems. The committee recommends an increase of \$4.3 million in PE 62123N for exploration of undersea security options, including \$2.0 million for development of a prototype real-time high frequency acoustic processor and \$2.3 million for undersea perimeter security technologies.

Nanomagnetic materials

The budget request included \$101.7 million in PE 62123N, for force protection applied research. Future naval capabilities such as the electric warship require significant amounts of electric power for propulsion, on-board power consumption, and ship-based use of power by military aircraft. The Navy needs new technology solutions capable of meeting the demanding performance requirements of high power density machines and power electronics. Current electrical power systems use magnetic materials developed for lower power demand functions. The committee recommends an increase of \$2.0 million in PE 62123N for development of nano-engineered materials with unprecedented magnetic properties, mechanical strength, and temperature capabilities.

Polymeric aircraft components

The budget request included \$101.7 million in PE 62123N, for force protection applied research. Polymeric aircraft components provide the Navy with an option for lower cost, lightweight aircraft. The committee recommends an increase of \$2.0 million in PE 62123N to support the Navy's efforts to develop technologies for production of polymeric aircraft components.

Small watercraft propulsion demonstrator

The budget request included \$101.7 million in PE 62123N, for force protection applied research. The Navy requires a fast, unmanned watercraft to launch and recover unmanned underwater vehicles in hostile environments. The committee recommends an increase of \$3.0 million in PE 62123N for research on and fabrication of a small watercraft propulsion demonstrator with a 60-knot retrieval capability.

Advanced combat headborne system

The budget request included \$37.6 million in PE 62131M, for Marine Corps landing force technology and \$56.4 million in PE 63640M, for Marine Corps advanced technology demonstrations. As part of an initiative in blast injury prevention, mitigation, and treatment, the committee recommends an increase of \$1.0 million in PE 62131M and \$1.0 million in PE 63640M to meet a Marine Corps requirement to expand and accelerate the research and de-

sign of an advanced integrated combat headborne system. The redesigned system would improve form, fit, and function; and increase protection to the eye, face, neck, and head, while maintaining comfort, communications integration, and weight reduction.

Critical area protection systems

The budget request included \$57.7 million in PE 62235N, for common picture applied research. The committee recommends an increase of \$2.0 million in PE 63235N for critical area protection systems for high resolution situational awareness to support antiterrorism and force protection missions. These systems could provide land-based antiterrorism and force protection units with persistent surveillance capabilities and a common operating picture.

SensorNet

The budget request included \$57.7 million in PE 62235N, for common picture applied research. The U.S. Government, the nation's laboratories, and industry are showing progress in developing and improving sensing capabilities. Full utilization of these capabilities requires communication and research on and development of a prototype information architecture for connection of sensors. The committee recommends an increase of \$12.0 million in PE 62235N for continuation of SensorNet, a project to demonstrate sensor-linking within an installation and from facility to facility.

Space research

The budget request included \$57.7 million in PE 62235N, for common picture applied research. The committee recommends a reduction of \$7.5 million in this account for a newly initiated program of space research as part of the Innovative Naval Prototype program. The committee believes that new space research efforts should be carefully coordinated with other space programs in the Department of Defense and should be consistent with the overall Department Space Science and Technology Strategy.

Automated video threat recognition

The budget request included \$82.8 million in PE 62236N, for warfighter sustainment applied research. The accelerated need for persistent surveillance in a variety of situations led the Navy to increase emphasis on alternatives to active radars. Video, as a passive sensor, could serve threat detection needs for naval facilities, ports, and other areas in which even the most alert human sentry may fail to identify every approaching danger. The committee recommends an increase in PE 62236N of \$2.5 million for transition of a successfully completed Phase II Small Business Innovative Research program to develop an automated video surveillance threat recognition algorithm.

Multifunctional composite structures

The budget request included \$82.8 million in PE 62236N, for warfighter sustainment applied research. The Navy's increased interest in using advanced composites for ship construction is designed to produce components with reduced electronic and acoustic

signatures and lower total ownership costs. Existing and developing composite material technologies present an opportunity to enhance seaframe speed, agility, safety, and tactical advantage. The committee recommends an increase of \$3.5 million in PE 62236N for development of new systems and techniques for the rapid implementation of multifunctional composite structures.

Portable water bio-defense

The budget request included \$82.9 million in PE 62236N, for warfighter sustainment applied research. Current biological warfare detector technology applicable to water analysis is generally large, stationary, and time consuming. The committee recommends an increase of \$3.0 million in PE 62236N for a rapid, portable, accurate detection capability for biological warfare agents in water.

Seabasing research

The budget request included \$82.9 million in PE 62236N, for warfighter sustainment applied research, including a new start of \$13.9 million for seabasing research. The committee recommends a reduction of \$5.0 million in this account for the newly initiated research program on seabasing technologies. The committee is concerned that this new program is not well defined to support seabasing concepts of operation, which are still under development by the Navy.

Gallium nitride radio frequency power

The budget request included \$47.3 million in PE 62271N, for radio frequency (RF) systems applied research. The Department of Defense requires enhanced RF power performance for a range of current and next generation systems, including surface naval radars, airborne communications systems, airborne radars, and electronics. Gallium nitride RF power has the potential to provide higher power density, higher temperature operation, and increased bandwidth, compared to current RF technologies. The committee recommends an increase of \$2.0 million in PE 62271N for gallium nitride RF power technologies.

Integrated littoral sensor network

The budget request included \$71.5 million in PE 62435N, for force protection advanced technology, but no funding specifically for testing of a portable suite of sensors to counter water borne and other hazards in the littorals. Detection, characterization, and location of man-made and natural waterborne hazards and threats, including pathogens and toxins, is an immediate national security need. The committee recommends an increase in PE 62435N of \$2.5 million for generation of a set of tools with portable sensors designed to improve accuracy and timeliness of short- and long-term detection of hazards in coastal waters and ports.

Coordination and integration of unmanned system teams

The budget request included \$49.5 million in PE 62782N, for mine and expeditionary warfare applied research. As unmanned systems continue to evolve and perform more dangerous and time consuming tasks on behalf of the warfighter, such systems must

work individually, or in groups, in a manner that does not place an additional burden on the operator. Increased fundamental science and engineering focused on the tough problems of enabling autonomous cooperation within different groups of unmanned vehicles would ensure these tools reach expected potential as assets to the warfighter. The committee recommends an increase in PE 62782N of \$3.0 million for work to integrate and coordinate teams of unmanned vehicles.

Information sharing for intelligence, surveillance and reconnaissance

The budget request included \$82.5 million in PE 63114N, for power projection advanced technology. The Navy possesses the technology to effectively target and destroy fixed assets using global position system guided weapons. This capability is limited by target concealment or motion. Real-time tracking, precision location, and in-flight command and control of weapons systems continue to pose problems.

The committee recommends an increase of \$3.0 million in PE 63114N to accelerate research and development of a robust airborne and ground information processing architecture. The system would support multiple-source and simultaneous collection of data for aircraft on intelligence, surveillance, reconnaissance, targeting, and engagement (ISRTE) operations. The architecture would have the capacity to handle numerous and different electronic files such as large imagery files, geographical information, intelligence reports, and data received from multiple platforms and would advance an important aspect of the Navy intelligence, surveillance, and reconnaissance plan for engagement of mobile targets.

Force protection advanced technology

The budget request included \$71.5 million in PE 63123N for forced protection advanced technology. This program addresses applied research associated with providing the capability of platform and force protection technologies for all naval platforms.

The budget request included no funding for wireless sensor technology for the intelligent monitoring of the health of shipboard equipment and machinery. This is a key component to reduce workloads, and it could be inserted into one of the programmed sea trials for newly delivered ships. The committee recommends an increase of \$2.0 million in PE 63123N to develop, install, and support a number of intelligent component health monitoring systems in a sea trial.

The budget request included no funding for development of a mobile manufacturing and repair cell. This cell would reduce operating and support costs while maintaining equipment readiness in theater. It could be deployed by ship and large ground vehicles, and would provide precision, on-demand manufacturing of critical parts. The committee recommends an increase of \$5.0 million in PE 63123N for the development of a mobile manufacturing and repair cell.

The budget request included no funding for the continued development of wide bandgap semiconductor substrate materials. These materials offer capability for higher power and higher frequency

operation in high temperature environments across a broad spectrum of applications. The committee recommends an increase of \$8.0 million in PE 63123N for the continued development of wide bandgap semiconductor substrate materials.

The budget request included no funding for a small, light system for small arms acoustic and infrared flash detection and remote threat response to enemy small arms fire against our Marines. The committee recommends an increase of \$3.9 million in PE 63123N to develop a prototype and test such a system.

The budget request included no funding for the continued design and risk assessment and development of prototypes for high temperature superconducting (HTS) generators. The reduced size of HTS generators would increase flexibility in ship architecture, provide enhanced power density and transient response, and improve overall ship performance and survivability. The committee recommends an increase of \$5.0 million in PE 63123N for the continued development of HTS generators.

The budget request included no funding for the continued development of a ship service fuel cell (SSFC). An advanced prototype fuel cell power system demonstrator has been developed. Additional performance characterization of the demonstrator is required, followed by endurance and latent defect testing at the DD(X) land-based engineering site. The committee recommends an increase of \$6.0 million in PE 63123N for the continued development of a SSFC.

The committee recommends a total authorization of \$101.4 million in PE 63123N for force protection advanced technology.

Improved shipboard combat information center

The budget request included \$60.6 million in PE 63235N, for common picture advanced technology. Command Information Center (CIC) duty officers receive large quantities of critical data, especially during combat operations. They must comprehend and process this information quickly. The committee recommends an increase of \$4.0 million in PE 63235N for near-term development of an improved shipboard CIC and to demonstrate integration of emerging technologies in automation to improve operations for multiple current and future platform designs.

Warfighter sustainment advanced technology

The budget request included \$68.5 million in PE 63236N for the development of warfighter sustainment advanced technology, but included no funding for body armor development or for automated container and cargo handling systems.

While protective vests have saved many lives, there is a requirement for flexible, lightweight, full body armor that will protect limbs as well. The committee recommends an increase of \$3.0 million in PE 63236N for the development of full body protective apparel.

The Navy and Marine Corps continue to develop a concept of operations for sea basing. One of the technical hurdles that must be achieved to turn this concept into reality is the transfer of cargo at sea, in varying sea states. There have been some subscale technologies tested as small business innovative research programs,

but this needs to evolve to full-scale testing of automated container and cargo handling systems. The committee recommends an increase of \$4.0 million in PE 63236N for the development of automated container and cargo handling systems.

The committee recommends a total authorization of \$75.5 million in PE 63236N.

Navy persistent surveillance

The budget request included \$70.1 million in PE 63271N, for radio frequency (RF) systems advanced development. Real-time precision target radar supports the Navy's time critical strike mission. The committee recommends an increase of \$3.0 million in PE 63271N to fully configure the APY-6 radar to meet broad area maritime surveillance and other emerging unmanned aerial vehicle requirements.

The Navy pursues electronic attack (EA) capabilities for a variety of missions with air, sea, and land applications. The Department of Defense Unmanned Aerial Vehicle Roadmap recommends development and operational assessment of an unmanned combat aerial vehicle capable of performing several missions including EA. To augment existing systems while extending the life of current low-density/high-demand electronic attack assets, the committee recommends an increase of \$3.0 million in PE 63271N for an acceleration of joint unmanned aerial vehicle electronic attack capabilities.

Armored patrol vehicle

The budget request included \$56.4 million in PE 63640M, for Marine Corps advanced technology demonstrations. Additional research to capture emerging technologies in the areas of mobility, materials, power generation, propulsion, survivability, durability, signature reduction, and modularity will speed protection systems for an expanded class of vehicles. The committee recommends an increase of \$3.0 million in PE 63640M for initial development of an armored patrol vehicle to address threats posed by blast, projectiles, and shock waves.

Laser integrated target engagement system

The budget request included \$56.4 million in PE 63640M, for Marine Corps advanced technology demonstrations. The committee recommends an increase of \$5.2 million in PE 63640M for a Marine Corps unfunded requirement to modify the laser integrated target engagement system (LITES). The program would finance one prototype and laboratory testing of a Marine Corps version of the Air Force forward air controllers capability.

Water purification system

The budget request included \$56.4 million in PE 63640M, for Marine Corps advanced technology demonstrations. Air deliverable, high capacity water purification systems meet a critical need during all military missions. Research on high efficiency, compact technology will help alleviate the significant logistical burden of transporting water. The committee recommends an increase in PE 63640M of \$7.0 million for final development and production of expeditionary warfare water purification systems.

Modeling and simulation for urban operations

The budget request included \$187.9 million in Research, Development, Test, and Evaluation, Navy, for Joint Experimentation, in PE 63727N, but did not include sufficient funding to continue development of the modeling and simulation for urban operations program. The committee notes that such a capability is of great importance to battlefield commanders facing complex urban environments such as that faced by U.S. Armed Forces in Fallujah, Iraq last year. Preliminary work has been initiated on such a capability with promising results, both for battlefield commanders and for defense and homeland security officials charged with planning for consequence management of potential terrorist attacks on the homeland. The modeling and simulation for urban operations program is the second highest priority of the Commander, U.S. Joint Forces Command, for additional funding.

The committee recommends an increase of \$9.9 million in PE 63727N, to continue development of the modeling and simulation for urban operations program.

Surface Navy integrated undersea tactical technology

The budget request included \$122.1 million in PE 63502N for surface and shallow water mine countermeasures, but included no funding for the surface Navy integrated undersea tactical technology (SNIUTT) program. SNIUTT would provide surface ship mine countermeasures sonar operators with the simulated training necessary to recognize mine-like contacts. This concept was originally used by aviation mine countermeasures sonar operators, and SNIUTT would leverage this former program. The committee recommends an increase of \$2.0 million in PE 63502N for SNIUTT.

Shipboard system component development

The budget request included \$22.2 million in PE 63513N for shipboard system component development, including \$9.2 million for the development of integrated power systems. The budget request included no funding specifically for either the amorphous metal permanent magnet generator (PMG) set or the high temperature superconductor alternating current (HTS-AC) synchronous marine propulsion motor.

An amorphous metal PMG would reduce both weight and size when compared to conventional generator sets. Additional funding would upscale the current 30 kilowatt prototype to 750 kilowatts. The committee recommends an increase of \$1.5 million in PE 63513N for the amorphous metal PMG.

A 36.5 megawatt HTS-AC synchronous marine propulsion prototype motor is being fabricated and tested. A follow-on effort can be initiated to modify the motor and power electronic drive system designs to meet the evolving specifications of the Navy's newest surface combatants. The committee recommends an increase of \$8.0 million in PE 63513N for the continued development of the HTS-AC synchronous marine propulsion motor.

The committee recommends a total authorization of \$31.7 million in PE 63513N.

Improved surface vessel torpedo launcher

The budget request included \$17.3 million in PE 63553N for anti-submarine warfare advanced development, but included no funding for the improved surface vessel torpedo launcher. This launcher would use an automotive airbag inflator launch concept in a new launcher, contoured into the deck of future ships. Additional funding would allow testing of the production model of the breech replacement version of the launcher. The committee recommends an increase of \$4.5 million in PE 63553N for the advanced development of the improved surface vessel torpedo launcher.

Guided missile submarine conversion

The budget request included \$24.0 million in PE 63559N for design work for guided missile submarines (SSGN). Four former Ohio-class ballistic submarines are currently being converted into this new class of submarine, which will have the capability to provide covert striking power against targets ashore and to covertly deliver and support an expeditionary force on land.

One of the most promising technologies for the SSGNs will be the ability to deploy unmanned undersea vehicles. To capitalize on the experimentation to demonstrate feasibility that has already been completed, additional funding is required to develop and experiment with the requisite stowage, launch, and recovery systems to gain understanding of ship integration technologies. The large displacement mission reconfigurable unmanned undersea vehicle (LD-MRUUV) would provide flexibility to deploy new payloads and sensors. The committee recommends an increase of \$20.0 million in PE 63559N for integration of LD-MRUUV into the SSGN as part of the conversion program.

Advanced submarine system development

The budget request included \$163.0 million in PE 63562N for advanced submarine system development. Of this amount, \$50.0 million is for the design of a future undersea superiority system alternative to the reduced submarine program to include consideration of new propulsion systems. The committee is aware that this effort was directed by the Department of Defense shortly before submission of the budget request, and that it was also directed that these funds not just be added to existing systems. No specific plans on the use of these funds have been provided to the committee.

The committee has received a study on Fleet Platform Architecture that was prepared by the Office of Force Transformation in response to section 216 of the National Defense Authorization Act for Fiscal Year 2004 (Public Law 108-136), and is aware that this study recommends investigating alternate propulsion systems for submarines.

In written testimony before the Subcommittee on Seapower of the Committee on Armed Services, the Congressional Research Service addressed alternate propulsion systems for submarines. The air-independent propulsion equipped non-nuclear-powered submarine would offer increased low speed submerged endurance over the conventional diesel-electric, but comparable submerged endurance at high speed. The testimony concluded that these alternatives to nuclear-powered submarines are not well suited for sub-

marine missions that require: (1) long, completely stealthy transits from home port to the theater of operation; (2) submerged periods in the theater of operation lasting more than two or three weeks; or (3) submerged periods in the theater of operation lasting more than a few hours or days that involve moving the submarine at something more than low speed. The committee is concerned with the reduced capabilities and lack of operational flexibility the submarine forces would possess with these new propulsion systems.

The committee is also aware of and supports the “Tango Bravo” program, being conducted jointly by the Navy and the Defense Advanced Research Projects Agency (DARPA). The technologies being investigated in this program include shaftless propulsion and weapons external to the pressure hull, all of which could contribute to a smaller, less expensive nuclear-powered submarine with capabilities equivalent to those of the *Virginia*-class submarine.

Numerous analyses have supported an attack submarine force of at least 55 boats. However, the Secretary of the Navy, in an interim report to Congress on the annual long-range plan for the construction of naval vessels, projects that the number of attack submarines required in the future will be between 37 and 41 boats. The committee is concerned that this reduced number of submarines will fall short of the number required by the combatant commanders. The committee believes that funds at this time should be directed at the class of submarines currently in production, and that the production rate should be increased above that shown in the Future Years Defense Program as soon as possible.

The committee recommends a decrease of \$40.0 million in PE 63562N, specifically in the future undersea superiority system project for development of propulsion alternatives, and that the remaining funding be used to complement the development of technologies being investigated in the Tango Bravo program by DARPA.

Regenerative filtration technology

The budget request included \$253.7 million in PE 63611M for the Expeditionary Fighting Vehicle (EFV), but no funding for regenerative filtration technology. Recent advances in nuclear, biological, and chemical filtration technology have brought about the development of regenerative systems that use canisters with chemical beds that can be used and cleaned while the vehicle is operating. Current technology requires filter replacement in a secure environment. In fiscal year 2005, the Marine Corps completed Phase I of the plan to develop a regenerative filtration system for the EFV, which will provide three units of the prototype system for testing. Phase II of this project consists of the completion of the system development and demonstration phase of the project. The committee recommends an increase of \$8.5 million in PE 63611M for acceleration of Phase II of regenerative filtration technology development, for a total authorization of \$262.2 million.

Marine Corps ground and supporting arms systems

The budget request included \$500,000 in PE 63635M, for the development of the follow-on to shoulder-launched multi-purpose as-

sault weapon (FOTS), but no funding for the development of non-lethal weapons nor a sniper detection system.

The FOTS program will qualify and field an accurate, shoulder-fired, assault weapon designed to defeat a variety of ground targets on the battlefield, particularly in urban environments like those encountered by Marine Corps forces engaged in Operation Iraqi Freedom and Operation Enduring Freedom. FOTS will replace the Shoulder-Launched Multi-Purpose Assault Weapon, which has been in the Marine Corps inventory for over 20 years. The committee believes the Marine Corps needs to accelerate the development of this weapon system.

Nonlethal weapon development includes research in support of clearing facilities with novel technology and nonlethal and scalable weaponization. These initiatives aim to minimize collateral damage to infrastructure and personnel, while neutralizing facilities and the threats that might be posed to these facilities and the personnel that occupy them. Additionally, an urban operations environmental laboratory will provide assessment and analysis of the affects of nonlethal technologies to ensure minimum environmental and collateral damage when used in urban activities. The committee believes that the Marine Corps must have a broad range of responses to contain and manage emerging threats before, during, and after conflict, and with minimum collateral damage. Therefore, the committee supports these initiatives.

The Marine Corps requires a means to locate hostile fire to address survivability for forces in urban environments such as Iraq. No existing system can locate sources of sniper fire quickly and dependably. However, the committee believes that technology exists to develop a system that uses a thermal source-of-fire indicator to pinpoint the location from which a shot has been fired.

The committee notes that the Commandant of the Marine Corps has identified additional funding for FOTS development, nonlethal weapon development, and a sniper detection system development on his unfunded priorities list.

The committee recommends the following:

- (1) an increase of \$14.0 for FOTS development;
- (2) an increase of \$5.5 million for the nonlethal weapons urban operations laboratory to expand the assessment, analysis, neutralization, and development of capabilities to ensure minimum environmental and collateral damage with nontraditional and traditional capabilities;
- (3) an increase of \$2.9 million to conduct research in support of clearing facilities with novel technology;
- (4) an increase of \$2.6 million for nonlethal technology weaponization to conduct additional research, education, and training to meet the goals of modern nonlethal and scalable options for Marine Corps forces deployed around the world; and
- (5) an increase of \$7.4 million to develop an anti-sniper infrared targeting system.

The committee recommends a total authorization of \$32.9 million in PE 63635M.

Marine mammal detection and mitigation

The budget request included \$4.54 million in PE 63721N, for environmental protection. The committee notes that there continues to be intense interest in the issue of sonar and other sound impacts on marine mammals. Research of this type will increase the scientific body of knowledge necessary to maintain the combat training necessary for military readiness while also protecting marine mammals. Better systems to detect marine mammals will aid in development of systems and procedures to mitigate potential impacts. Data collected from such systems will also be invaluable in better understanding migration routes, population densities, and habits.

The committee recommends an increase of \$5.0 million in PE 63721N for marine mammal detection and mitigation.

Navy logistics common operating picture

The budget request included \$51.2 million in PE 64231N for the Tactical Command System, but contained no funding for the Navy logistics common operating picture (LOGCOP). Navy LOGCOP is a logistics decision support and management tool based on predictive software technology that was developed under a Navy-sponsored small business innovative research program. The committee recommends an increase of \$2.0 million in PE 64231N for the development of Navy LOGCOP.

Automatic radar periscope detection and discrimination

The budget request included \$29.5 million in PE 64261N for acoustic search sensors, including \$12.2 million for the automatic radar periscope detection and discrimination (ARPDD) project. ARPDD provides a fully automated periscope detection, classification, and tracking capability to reliably detect periscopes and masts in complex, cluttered environments. The committee recommends an increase of \$3.0 million in PE 64621N to accelerate the ARPDD project.

DD(X) destroyer integrated propulsion system

The budget request included \$1,114.8 million in PE 64300N for DD(X) destroyer total ship systems engineering. The budget request included no funding for completing the development of the integrated power system for this ship, since final developmental testing of the integrated power system is expected to be completed in fiscal year 2005 prior to the ship's critical design review and the subsequent transition of funding to the Shipbuilding & Conversion, Navy account for detail design.

In proof of concept tests prior to shipment to the Navy's land-based test facility, the primary propulsion motor planned for the integrated power system, the permanent magnet motor (PMM), experienced a failure. The failure was determined to be caused by insulation, resulting in damage to the stators of the motor. To maintain schedule to meet the ship critical design review, the Navy has decided to fall back to an alternate propulsion motor, the advanced induction motor (AIM), for demonstration at the land-based test facility. Use of the AIM would add 300 tons to the weight of the DD(X). Funding is not adequate to pursue both technologies.

The committee believes that continued development of the PMM is warranted, if not for incorporation in the lead ship, for incorporation in following ships. The committee recommends an increase of \$10.0 million in PE 64300N for continued development and testing of the PMM for the DD(X) destroyer.

Affordable towed array construction

The budget request included \$95.5 million in PE 64503N for submarine systems equipment development, but included no funding for the continued development of new, highly reliable, low cost fiber optic towed arrays. Funding is required to accelerate system performance verification testing, demonstrate array architectural flexibility, implement automated manufacturing equipment, and qualify commercial suppliers. The committee recommends an increase of \$6.0 million in PE 64503N for the development of affordable towed array construction.

New Design SSN

The budget request included \$155.8 million in PE 64558N for the continuing development of the *Virginia*-class submarine. The development efforts in this program are to evaluate a broad range of system and technology alternatives to directly support and enhance the mission capability of this class of submarine.

The budget request included no funding to develop the multi-mission module concept, with the focus to identify flexible payload concepts. The committee believes that the baseline *Virginia*-class design allows for integration of innovative payloads and sensors, which would enhance its capability. The committee recommends an increase of \$30.0 million in PE 63558N for multi-mission module development.

The budget request included no funding to develop a large aperture bow array for the *Virginia*-class submarine. This array has the potential to allow for the rapid insertion and spiral development of future sensor technologies, increasing sonar performance at a lower cost than the current spherical array. The committee recommends an increase of \$10.0 million in PE 64558N for development of a large aperture bow array.

The budget request included no funding to transition the small business innovative research programs for advanced processing builds and multipurpose processor rapid commercial, off-the shelf insertion. Transition of these efforts would lead to an infrastructure for the *Virginia*-class submarine that could support insertion of network-centric intelligence, surveillance, and reconnaissance. The committee recommends an increase of \$4.0 million in PE 64558N for network-centric capability technology insertion.

The committee recommends a total authorization of \$199.8 million in PE 64558N.

Submarine tactical warfare system

The budget request included \$40.7 million in PE 64562N for submarine tactical warfare systems development. This program develops commercial, off-the-shelf based software and hardware upgrades to integrate improved weapons and tactical control capabilities for all submarine classes.

The budget request included no funding specifically for the insertion of common open architecture technology. Open architecture is key to enabling timely weapons system software upgrades. The committee recommends an increase of \$3.5 million in PE 64562N for submarine common open architecture technology insertion.

The budget request included no funding to initiate the development of the automated submarine command and control center. This development would reduce the number of personnel necessary for submarine attack center operations. The committee recommends an increase of \$3.5 million in PE 64562N for development of the automated submarine command and control center.

The committee recommends a total authorization of \$47.7 million in PE 64562N.

Autonomous unmanned surface vessel

The budget request included \$45.9 million in PE 64755N for detection and control for ship self-defense, but included no funding for the continued development of the autonomous unmanned surface vessel (AUSV), which is being developed as a concept demonstrator for potential anti-terrorism force protection missions and to protect harbors and coastal facilities. The committee recommends an increase of \$5.2 million in PE 64755N for the continued development of the AUSV.

NULKA anti-ship missile decoy development

The budget request included \$24.0 million in PE 64757N for development of soft kill technologies for ship self-defense and \$1.0 million for the continuing development of the NULKA decoy. NULKA is an offboard, active decoy designed to counter a wide variety of present and future radar-guided anti-ship missiles. Continued development of NULKA is necessary to counter anti-ship missiles that may migrate to other frequency bands or use dual mode seekers. The committee recommends an increase of \$9.0 million in PE 64757N for the continued development of the NULKA decoy.

Navy medical research

The budget request included \$7.2 million in PE 64771N, for medical development. The Department of Defense medical research continues to produce results in the form of vaccines and treatments to address the threat posed by biological weapons and naturally occurring illnesses in areas of military operation. Enhanced distribution techniques and more efficient delivery of treatments would further reduce logistical and personnel requirements, while increasing protection. The committee recommends an increase of \$3.5 million in PE 64771N for non-invasive vectored vaccine research to explore a new approach to production of a consistent, highly immunogenic, and easily manufactured and administered vaccine.

Research on methods to prevent and address severe blood loss due to combat injuries challenges both the Army and Navy medical communities. Various blood preservation developments combined with innovations in blood loss treatments and blood replacement therapies yield life saving advances. Additional work in these areas would reduce treatment side effects and prolong the viability of blood substitutes. The committee recommends an increase of \$9.0

million in PE 64771N, including \$3.0 million to facilitate hemostatic therapy trials; \$2.0 million for advanced research and development to improve the QuickClot treatment for internal use; and \$4.0 million for evaluation of the safety and efficacy of a room and elevated temperature stable hemoglobin-based oxygen carrier.

Shared Reconnaissance Pod logistics support

The budget request included \$88.7 million in PE 24136N for F/A-18 improvements, but included no funding for Shared Reconnaissance Pod (SHARP) logistics support. The SHARP system is an electro-optical/infrared system that is capable of collecting long- and medium-range imagery and can record or data link the imagery to provide the combatant commander information with which to identify possible targets. The development of logistics support for 21 SHARP systems—including interactive electronic technical manuals, completion of specific tasks associated with the Automated Maintenance Environment, and fleet aircrew and maintenance training curricula and maintenance training aids—are required for SHARP to achieve full operational capability. SHARP logistics support is included on the Chief of Naval Operations' unfunded priorities list. The committee recommends an increase of \$3.2 million in PE 24136N for SHARP logistics support.

Marine Corps communications systems

The budget request included \$237.1 million in PE 26313M, for communications systems development, including \$18.3 million for the development of the ground/air task orientated radar (G/ATOR) and \$5.8 million for the development of the distributed common ground/surface system (DCGS). The budget request included no funding for the Critical Infrastructure Protection Center (CIPC).

The G/ATOR program is a single material solution for the Multi-Role Radar System (MRRS) and Ground Weapons Locator Radar (GWLR) requirements that replaces and consolidates the capability of numerous legacy radars, including the AN/TPS-63 air surveillance, AN/MPQ-62 force control, AN/TPS-73 air traffic control, and AN/UPS-3 air defense radar systems. Current radar performance does not meet operational forces' requirements. Additional funding for G/ATOR development is on the Commandant of the Marine Corps' unfunded priorities list. The committee recommends an increase of \$3.5 million in PE 26313M for G/ATOR.

The DCGS is a collection of service systems that will contribute to joint and combined war fighter needs for intelligence, surveillance and reconnaissance support. The DCGS integrated backbone (DIB) is the architecture that will tie the services' DCGS systems together into one family of systems. The committee notes that the Marine Corps portion of the DCGS has not been integrated into the DIB. The committee recommends an increase of \$4.8 million in PE 26313M to complete integration efforts.

The mission of CIPC is to foster system security engineering solutions for critical infrastructure protection by integrating information operations, emergency management, and other critical infrastructure protection initiatives. The committee notes that the Marine Corps has an ongoing requirement to perform information systems security functions that could be addressed by the CIPC. The

committee recommends an increase of \$3.5 million in PE 26313M, for information system security development.

The committee recommends a total authorization of \$248.9 million in PE 26313M.

Marine Corps ground combat and supporting arms systems

The budget request included \$48.4 million in PE 26623M for the development of Marine Corps ground combat and supporting arms systems, including \$1.8 million for the Family of Raid and Reconnaissance equipment program and \$7.1 million for the Expeditionary Fire Support System (EFSS), but no funding for the Light Armored Vehicle (LAV) Sense and Respond Support System.

EFSS will be the primary indirect fire support system for the vertical assault element of the ship-to-objective maneuver force and is intended to fill the third “leg” of the Marine Corps’ indirect fires triad, complementing longer-range systems such as the M777 155mm lightweight towed Howitzer and the High Mobility Artillery Rocket System. Munition development lags equipment development. Additional funding for EFSS is on the Commandant of the Marine Corps’ unfunded priorities list. The committee recommends an increase of \$11.0 million to modify existing munitions from the family of 120mm rifled mortar rounds for use with EFSS.

The Family of Raid and Reconnaissance equipment program supports the research, development, and procurement actions for multiple airborne and specialized reconnaissance-related programs. Without a flexible multi-mission support platform, the Marine Corps cannot take full advantage of its recent investment in the Underwater Reconnaissance Capability (URC). URC consists of an advanced diver propulsion device, state-of-the-art hydrographic mapping equipment, and other critical maritime reconnaissance equipment to include the Multi-Role Intermediate Support Craft (MRISC), a replacement for the outdated and inefficient Combat Rubber Raiding Craft. The Marine Corps is currently evaluating commercial, off-the-shelf variants and additional funding would accelerate that evaluation. The committee recommends an increase of \$9.5 million for the MRISC.

For the last two years, the Marine Corps has been studying the creation of a Sense and Respond Support System to monitor overall system health of the LAV. The Marine Corps needs to develop the technology to embed a variety of sensors in metal parts of the LAV. Successful implementation of this technology will decrease maintenance “down” time, increase readiness, and be a better predictor of vehicle life throughout its life cycle. The committee recommends an increase of \$4.0 million for development of a LAV SRSS.

The committee recommends a total authorization of \$72.9 million in PE 26623M.

Battlefield management system

The budget request included \$10.5 million in PE 26624M, for the development of combat service support equipment, but no funding for the battlefield management system (BMS). The committee understands that the Marine Corps is currently exploring ways to improve situational awareness for Marine Corps armored ground vehicles and mechanized infantry at the platoon, company, and bat-

talion level by providing target acquisition, fire coordination, sensor-to-shooter target management, mounted navigation, and instant dissemination of situational awareness information. The Marine Corps is ready to initiate Phase II of the program which will address Phase I technical issues of integrating BMS into the M1A1 Tank and the Amphibious Assault Vehicle. The committee recommends an increase of \$1.5 million in PE 26624M for BMS development, for a total authorization of \$12.0 million.

RQ-8B Firescout vertical takeoff and landing unmanned aerial vehicle

The budget request included \$77.6 million in PE 35204N for the development of tactical unmanned aerial vehicles, including \$60.1 million for the development of the RQ-8B Firescout vertical takeoff and landing unmanned aerial vehicle (VTUAV). The Firescout VTUAV was designed to provide real-time intelligence, surveillance, and reconnaissance data to tactical users. A Firescout system is composed of three air vehicles, sensors, and control systems. The Firescout VTUAV will be common to the three modules to be incorporated on the Littoral Combat Ship (LCS). Additional funding for the Firescout VTUAV was included on the Chief of Naval Operations' unfunded priorities list to support the first LCS deliveries.

The committee recommends an increase of \$39.0 million in PE 35204N to procure six additional Firescout air vehicles and sensor packages to support the completion of developmental and operational testing and integration with the first deliveries of LCS.

Distributed common ground system—Navy

The budget request included \$12.4 million in PE 35208N for development of the distributed common ground system for the Navy (DCGS-N), but included no funding for integration of the advanced field artillery tactical data system (AFATDS), which provides automated command and control for the firepower aboard Navy ships. The converged architecture enabled by DCGS-N provides unparalleled flexibility to the warfighter and rapid response capability against relocatable, time critical targets. Currently, fire control information must be manually transferred between DCGS-N and AFATDS. The committee recommends an increase of \$3.2 million in PE 35208N for the integration of AFATDS into the DCGS-N architecture.

National shipbuilding research program—advanced shipbuilding enterprise

The budget request included no funding in PE 78730N for maritime technology. In recent years, funding provided by this line was used for the national shipbuilding research program—advanced shipbuilding enterprise (NSRP-ASE). This enterprise is a collaborative effort between the Navy and industry, which has yielded new processes and techniques that reduce the cost of building and repairing ships. The program has already documented a positive return on investment.

Section 242 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375) expressed

the sense of the Congress that the Secretary of Defense should continue to fund this program at a sustaining level. With a shrinking industrial base for shipbuilding already driving higher costs, this type of initiative is essential to providing efficiencies. The committee believes it is shortsighted not to invest in improved processes that would reduce the cost of shipbuilding. The committee recommends an increase of \$10.0 million in PE 78730N for the NSRP-ASE.

Air Force basic science

The budget request included \$223.9 million in PE 61102F, for Air Force defense research sciences. Innovative work supported by the Air Force basic research accounts is key to ensuring that our military has future capabilities and equipment to meet emerging threats. Applications such as air combat systems and ground support optoelectronics have foundations in novel nanomaterials used for the development of optical devices which are, in turn, components of information processing systems. The ability to quickly, securely, and reliably process information enables information dominance, one of a number of broad defense objectives. The committee recommends an increase of \$2.5 million in PE 61102F, for nanophotonic components, the building blocks of electronic materials in a number of aircraft, ship, and soldier systems.

Air Force missions in the areas of reducing time to target and rapid response to global threats require basic and applied research on missile propulsion systems. Research on hypersonic engine designs have produced some early results over the last year. Design tools to predict and monitor performance of propulsion and control systems are needed, as are trained experts to move promising research forward. The committee recommends an increase of \$4.0 million in PE 61102F to expand basic hypersonics research and to develop a strong academic program in hypersonics flow physics.

Secure, assured information sharing

The budget request included \$105.0 million in PE 61103F, for university research initiatives. Air Force university research supports defense related basic science in a wide range of scientific and engineering disciplines important to maintaining U.S. military technology superiority. One basic science pursuit of increasing significance involves investigation into information management in the “need to know” and “need to share” environments. The committee recommends an increase of \$2.5 million in PE 61103F to expand research on novel approaches to information sharing requirements and to address policies, procedures, and technology to meet differing security protection levels and requirements.

Blast resistant barriers

The budget request included \$74.2 million in PE 62102F, for materials research. The committee supports research focused on the development of materials, composites, and structural designs to protect personnel and equipment from the threat of vehicle borne and other explosive device delivery methods. A variety of commercial and “makeshift” barricades currently provide protection to bases, facilities, and structures in the homeland and abroad. The committee recommends an increase of \$4.0 million in PE 62102F for research and development of blast resistant barriers, including engineering of materials for different structural designs, testing, and establishment of blast barrier standards.

Air Force materials research

The budget request included \$74.2 million in PE 62102F, for materials research. The committee recommends an increase of \$1.0 million in PE 62102F for nano-particle materials coating research.

This research has the potential to develop advanced aeronautical coatings to improve the reliability and corrosion resistance of Air Force platforms.

The Department of Defense has a need for improved, affordable aerospace structures. Composite materials offer the potential for cost and weight savings along with improved air and space vehicle performance. The committee recommends an increase of \$2.0 million in PE 62102F for accelerated development of complex composite structures for manned and unmanned air vehicles.

Nano-technologies for chemical and biological defense

The budget request included \$79.4 million in PE 62202F, for human effectiveness applied research. Progress has been made in development of multiple-step processes for the detection, identification, and neutralization of single biological agents. A system capable of executing all three steps at once for a wide range of bio-agents, in different environments, would add value to existing capabilities. The committee recommends an increase of \$1.0 million in PE 62202F to augment ongoing research on the use of pulsed power plasma produced nano-particles to detect, identify, and defeat pathogens in a one-step process.

Hypersonics engine research and integration

The budget request included \$107.5 million in PE 62203F, for aerospace propulsion, including \$18.9 million for advanced aerospace propulsion technologies and hypersonic weapons and aircraft concepts. The committee notes that the X-43A successfully achieved Mach 9.8 during test flights last year, and believes that the joint Air Force and National Aeronautics and Space Administration (NASA) X-43 effort represents an important technology pathway to achieving a hypersonic operational capability.

The committee recommends an increase of \$12.0 million in PE 62203F to support a more aggressive hypersonics scramjet research program, to facilitate additional ground testing of the X-43 engine, and to evaluate initial concepts for integration of engine and vehicle designs. The committee strongly encourages NASA and the Air Force to work jointly on this program and to support the multi-engine demonstrator in future budget requests.

The committee notes that magnetohydrodynamics (MHD) may have applications when integrated with hypersonic vehicles now under development. The committee believes a better understanding of the advantages of the technology, the technical challenges to its use, and the potential for incorporation into hypersonic vehicle designs would be beneficial. The committee directs the Secretary of Defense, in coordination with the Administrator of the National Aeronautics and Space Administration, to provide a report to the congressional defense committees, by March 15, 2006, surveying both classified and unclassified MHD research conducted in the past and provide recommendations on whether military applications may be derived from MHD technology.

Space technology

The budget request included \$84.5 million in PE 62601F, for space technology. In response to Department of Defense guidance,

the Air Force research community embarked on an effort to support the space dominance mission. Integration of multiple functions into single space structures capable of autonomous fabrication and assembly represents a key focus of investigation in this area. Nano-reinforced structural space systems and advanced multifunctional space structures show promise in facilitating major improvements in space structure utility and performance. The committee recommends an increase of \$2.0 million in PE 62601F for expanded research in both of these structural areas and for examination of concepts for weight and cost reduction of space structural systems.

The committee further recommends an increase of \$6.0 million in PE 62601F, including \$3.0 million for the deployable space structures experiment, a general effort to lower the cost of spacecraft by instituting commonality and modularity in the construction of satellites; and \$3.0 million for integrated control for autonomous space systems, a program focused on development of advanced satellite control and measurement technologies needed to operate Air Force space and airbreathing systems.

Adaptive optics research

The budget request included \$37.7 million in PE 62605F, for directed energy research. Advanced digital communications allow for high levels of data transfer and rapid processing of visual images in support of network centric warfare. The Air Force has been doing work with lasers to expand communications bandwidth and to increase digital communication capabilities. The committee recommends an increase of \$3.0 million in PE 62605F to accelerate this work and to support adaptive optics research for laser communications systems.

Integrated spacecraft engineering tool

The budget request included \$60.9 million in PE 63401F for Advanced Spacecraft Technology, but no funding for the integrated spacecraft engineering tool (ISET).

ISET would be used to build software models to enable satellite system designers, builders, and operators to accurately and reliably model and predict the performance of space systems. This would provide significant cost savings in the development and integration of future satellite systems and aid in the analysis of alternatives for prospective space systems.

The committee recommends an increase of \$3.0 million in PE 63401F to develop, demonstrate, and validate an integrated spacecraft engineering tool—to support rapid prototyping, and to collaborate research, development, testing, and evaluation of advanced spacecraft and aerospace vehicles.

Laser eye protection

The budget request included \$36.7 million in PE 63112F, for advanced materials for weapon systems. The committee recommends an increase of \$5.0 million in PE 63112F to address an Air Force requirement for laser eye protection.

Metals affordability initiative

The budget request included \$36.7 million in PE 63112F, for advanced materials for weapons systems. The committee recommends an increase of \$2.0 million in PE 63112F for unfunded priority Air Force research on specialty aerospace metals as part of the Metals Affordability Initiative. This type of research could lead to cheaper and higher performance aerospace metals and alloys, which will contribute significantly to future military air and space capabilities.

Aerospace propulsion and power technologies

The budget request included \$77.3 million in PE 63216F, for aerospace propulsion and power technology. Traditional oil lubrication of propulsion and power systems carries operation and maintenance costs that could be avoided through the use of alternative technologies. The committee recommends an increase in PE 63216F of \$3.0 million to advance the more electric gas turbine research to a technology readiness level for prototype development and testing. Application of this technology could improve performance, reliability, and cost-effectiveness of propulsion and power systems by replacing oil lubrication with magnetic and electrical components in gas turbine engines.

The Air Force is pursuing research on reusable high-speed turbine engines for a hypersonic cruise missile. The Air Force Science and Technology unfunded priority list includes a request for additional research on a Mach 4+ turbine engine for rapid long-range strike and operational responsive space lift. The committee recommends an increase of \$10.0 million in PE 63216F for the advanced supersonics cruise missile, to meet the Air Force unfunded requirement in this area and to accelerate and expand ground demonstrations to include critical integration technologies such as the supersonic inlet, exhaust nozzle and afterburner subsystems.

Versatile affordable advanced turbine engines

The budget request included \$77.3 million in PE 63216F, for aerospace propulsion and power technologies. The Versatile Affordable Advanced Turbine Engine (VAATE) program is a joint program between the Departments of Defense and Energy, the National Aeronautics and Space Administration, and industry to develop, demonstrate, and transition advanced, multiuse turbine engine technologies. The committee recommends an increase of \$2.5 million in PE 63216F to meet Air Force requirements for accelerated development of these technologies that could be key to the evolution of long-endurance, high efficiency engines for emerging unmanned aerial combat systems.

Ballistic missile technology

The budget request included \$60.9 million in PE 63401F for advanced spacecraft technology.

The committee is aware of the need to develop common advanced guidance technology applicable to Air Force and Navy strategic ballistic missile systems and future space vehicles. These efforts support capabilities needed to fulfill validated requirements for land-based strategic deterrence and prompt global strike.

The committee recommends an increase in \$5.0 million in PE 63401F for advanced technology demonstrations in guidance and control, flight computers, vehicle structures, and range safety technology.

AC coupled interconnect

The budget request included \$60.9 million in PE 63401F, for advanced spacecraft technology.

The committee notes that the Air Force has been exploring ways for satellites to operate more effectively on the limited power offered by solar cells. AC coupled interconnect is a new technique that would provide for the connecting of electronic chips in computer and electronic equipment at more efficient rates. In 2004, a key demonstration of this technology resulted in chips communicating with each other at 6 GHz. Additional funding would produce a complete technology for connecting electronic chips for all fields of application, including satellites.

The committee recommends an increase of \$3.0 million in PE 63401F for AC coupled interconnect development.

Energy cells for defense and intelligence applications

The budget request included \$60.9 million in PE 603401F, for advanced spacecraft technology, but no funding for the development of Beta Energy Cells (BEC).

The committee understands that BEC can be used to charge batteries and super capacitors to greatly extend the operational life of critical military and intelligence systems.

The committee recommends an increase of \$3.0 million in PE 603401F to complete the development phase of BEC research and make prototype products available to defense and intelligence users.

Radically Segmented Launch Vehicle

The budget request included \$61.0 in PE 63401F, for advanced spacecraft technology, but no funding for the Radically Segmented Launch Vehicle (RSLV)

The RSLV program addresses a broad range of Department of Defense mission requirements for low-cost, routine, and responsive space launch. Program development and risk reduction for responsive space launch is currently performed under a joint Air Force, National Air and Space Administration, and Defense Advanced Research Project Agency program management arrangement. The committee is supportive of efforts to acquire an operationally responsive space capability to support the warfighter.

The committee recommends an increase of \$4.0 million in PE 63401F to perform engineering development, prototype hardware fabrication, and ground testing of the RSLV for the purpose of mitigating technical risk and validating cost savings potential.

Thin film amorphous solar arrays

The budget request included \$60.9 million in PE 63401F, for advanced spacecraft technology, but no funding for thin film amorphous solar arrays.

The committee is aware of the need to reduce the cost of satellite launches, which is driven to a large extent by the weight of satellite payloads. The committee believes research on thin film amorphous solar arrays has the potential to produce solar arrays that are significantly less expensive, lighter, and more efficient than current solar arrays.

The committee recommends an increase of \$10.0 million in PE 63401F for thin film amorphous solar array research and development.

High Accuracy Network Determination System

The budget request included \$5.8 million in PE 63444F, for the Maui space surveillance system, but no funding for the High Accuracy Network Determination System (HANDS).

The Air Force satellite control network maintains careful management of satellites that perform missions of crucial importance to national security, such as detecting ballistic missile launches against the United States as well as space launches and nuclear detonations. HANDS technology has the potential to increase the accuracy of the data gathered in support of this mission.

The committee recommends an increase of \$5.0 million in PE 63444F to research, develop, and demonstrate capabilities of HANDS technology.

Laser threat warning attack reporting

The budget request included \$53.4 million in PE 63500F, for the multidisciplinary advanced development space program.

The committee notes that U.S. space systems are becoming increasingly vulnerable to deliberate hostile or intrusive attacks from lasers deployed by foreign governments and terrorist groups. The purpose of the laser threat warning attack reporting (LTWAR) for space program is to develop electro-optical sensors capable of detecting such laser radiation incidents on space systems.

The committee recommends an increase of \$5.0 million in PE 63500F to accelerate the LTWAR.

Enable network centric warfare

The budget request included \$30.1 million in Research, Development, Test, and Evaluation, Air Force, for Command, Control, Communications, and Intelligence Advanced Development, but included no funding for science and technology efforts to continue development and fielding of advanced capabilities that will facilitate the ability of air platforms to engage in airborne networking and improve their ability to participate in network centric operations.

The enable network centric warfare program is an urgent need requirement that was identified by the Commander, U.S. Central Command (CENTCOM), after the fiscal year 2006 President's budget request had been submitted. The concept of network centric warfare is being implemented within the Department of Defense, but challenges remain in developing the capabilities to fully enable airborne platforms to be integrated into network centric operations. This integration effort is expected to result in a reliable, secure, and assured network centric communications infrastructure for ground mobile and airborne platforms that will improve the ability

of battlefield commanders to see the battlespace and coordinate the use of weapons systems.

The committee recommends an increase of \$3.2 million in PE 63789F, to accelerate development and fielding of operational airborne networking equipment for network centric operations and more quickly meet the urgent need requirement of the Commander, U.S. CENTCOM.

Military satellite communications

The budget request included \$835.8 million in PE 63845F, for the Transformational Satellite Communications system (TSAT) and \$665.3 million in PE 63430F, for the Advanced Extremely High Frequency (AEHF) system.

The committee recognizes the increasing importance of communications to net-centric military operations and remains supportive of the TSAT effort to provide substantial increases in bandwidth to the military and intelligence user. The committee notes, however, that while TSAT has been an acquisition program since January 2004, only one of its seven critical technologies is mature, according to the Government Accountability Office's 2005 assessment of major weapon programs.

The committee has been concerned that the technical risks in the program are very high given the state of critical technology development. In hearings before Congress in 2004 and 2005, then-Under Secretary of the Air Force, Peter Teets, acknowledged that if the TSAT program were to experience unanticipated problems, the Air Force would adjust its strategy by taking "acquisition off-ramps." These off-ramps or back-up technologies are associated with critical technologies from the Advanced Extremely High Frequency (AEHF) satellite program.

Given the technological risks associated with TSAT, the committee recommends that the Air Force provide funding to the AEHF program for the development and procurement of a fourth AEHF satellite. The committee directs the Air Force to focus TSAT funding and development efforts primarily on those activities directly related to maturing critical technologies. Finally, the committee recommends that the Air Force consider incorporating available maturing TSAT technologies into the fourth AEHF satellite, if feasible. This approach is in accordance with the Department of Defense's updated space acquisition policy, which states that evolutionary acquisition is the preferred strategy for rapid acquisition of mature technology for the user. Procuring a fourth, incrementally enhanced AEHF satellite could serve to shorten the time in moving from AEHF to TSAT capabilities as well as reduce the overall risks in achieving TSAT capabilities.

In accordance with these recommendations, the committee recommends a decrease of \$200.0 million in PE 63845F for TSAT and an increase of \$100.0 million in PE 63430F for AEHF.

Space radar

The budget request included \$225.8 million in PE 63858F, for space radar (SR).

In the statement of managers accompanying the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005

(Public Law 108–375), the conferees expressed the view that while they were strongly supportive of radar satellites, the Air Force cost estimates for the notional space based radar (SBR) architecture, as presented in the fiscal year 2005 budget request, made the system potentially unaffordable. The conferees noted that affordability would be dependent on the development of a single radar satellite system to meet both military and intelligence community needs and the integration of the space-based radar into an architecture consisting of other intelligence, surveillance, and reconnaissance (ISR) capabilities. Consequently, the Department of Defense was directed to restructure the SBR effort to focus on continued technology maturation, architectural analysis, and system evolution.

The committee believes that while the Air Force has taken steps to address congressional concerns, the restructured space radar (SR) program still lacks sufficient programmatic and cost definition. The committee welcomes realignment of the SR program budget to focus on early development and demonstration of ground infrastructure and ground capabilities that may have benefits beyond the space radar program. While the committee supports a demonstration project to help validate technology readiness and ascertain costs for the objective system, the committee questions the Air Force decision to pursue an on-orbit demonstration as opposed to an earlier, less costly airborne experiment. Moreover, the inability of the Air Force to provide a firm cost estimate for the demonstration project illustrates the uncertainty of the approach. While the joint memorandum on the space radar program signed by the Secretary of Defense and the Director of Central Intelligence on January 13, 2005, is a welcome sign, the lack of agreement on a specific cost share for the program is an indication that much has yet to be decided before Congress can provide its full support for this program. Finally, the committee notes that two important reports to Congress, addressing various options for the space-based radar architecture and key features of an ISR system-of-systems architecture, have yet to be completed and received by this committee—another indication that Department plans for space radar remain uncertain.

The committee recommends a decrease of \$75.0 million in PE 63858F, and strongly urges the Department to consider an airborne demonstration in fiscal year 2006 or early fiscal year 2007 to inform a Key Decision Point B decision for the objective Space Radar program as soon as possible. The committee directs the Secretary of Defense to provide a report to the congressional defense committees by January 15, 2006, on the Department's plan for the objective Space Radar program, including associated costs. Finally, the committee recommends that the Department seek solid commitments from the Director of National Intelligence regarding cost and requirements sharing for space radar before the fiscal year 2007 budget request submission.

Tactical satellite demonstrations

The budget request included \$23.5 million in PE 64855F for operationally responsive launch, but no funding for tactical satellite demonstrations.

The U.S. space transportation policy of January 6, 2005, directs the government to demonstrate before 2010 an initial capability for operationally responsive access to and use of space to support national security requirements. The Air Force is pursuing a joint warfighting space concept to provide prompt space support for the warfighter by rapidly launching rockets with small, militarily useful satellites that would be controlled by the warfighter. The objective is to develop tactical satellites that could be stored and, when directed, launched and ready to support operations within a few days compared to the two-year lead time that is currently needed for satellite launches. The committee has been supportive of this concept as a way to improve space support to the warfighter and reduce the cost and development time for military space systems. The Air Force and other service partners have funded the first satellite experiment and most of the satellite work for the second joint warfighting space satellite, JWS-2, (otherwise known as TacSat-3) but no funds are currently budgeted for other important demonstration pieces, including the launch. The committee notes that the Chief of Staff of the Air Force's unfunded priorities list includes a \$13.5 million request for this purpose.

The committee recommends an increase of \$10.0 million in PE 64855F to fund the launch and range costs for JWS-2, and one year of satellite operations.

Robust nuclear earth penetrator

The budget request included \$15.2 million in PE 64222F for development of nuclear weapons support, including \$1.0 million for the development of nuclear weapons and counterproliferation technologies to support joint Air Force and National Nuclear Security Administration efforts associated with logistics and aircraft integration for the Robust Nuclear Earth Penetrator (RNEP). The committee notes that the evaluation of RNEP feasibility by the Department of Energy is not scheduled to be completed prior to 2007. Therefore, the committee recommends a decrease of \$1.0 million in PE 64222F for efforts associated with logistics and aircraft integration for the RNEP.

Space control test capabilities

The budget request included \$24.7 million in PE 64421F, for Air Force counterspace systems.

The "National Space Policy" of September 1996 specifies that the United States will develop, operate, and maintain space control capabilities to ensure freedom of action in space and, if directed, deny such freedom of action to adversaries. The committee recognizes that continuing development by the Army Aviation and Missile Research, Development and Engineering Center of software applications used to integrate offensive and defensive space control systems into a single system-of-systems simulated testbed could contribute to near-term capabilities for space control and situational awareness.

The committee recommends an increase of \$6.0 million in PE 64421F for continued test and development of command and control capabilities for ground-based space control assets.

FPS-16 radar mobilization and upgrade

The budget request included \$55.3 million in PE 64759F, for major test and evaluation investments. The committee recommends an increase of \$5.0 million in PE 64759F for upgrade and mobilization of an additional fixed positioning system (FPS)-16 radar. Updating the radar with fully digital electronics would increase reliability, decrease maintenance time and cost, and enhance radar performance and data products. Mobilization of the radar will facilitate flexibility and increase optimal tracking coverage.

Ballistic missile range safety technology

The budget request included \$13.8 million in PE 65860F for the rocket systems launch program, but no funding for ballistic missile range safety technology (BMRST).

The committee is aware that BMRST is a global positioning system based launch range safety system that has the potential to provide significant technical and reliability advantages and cost savings over current radar systems. The committee notes that several launch ranges have requested BMRST systems for local range certification as well as down-range reentry support.

The committee recommends an increase of \$15.0 million in PE 65860F to support expanded BMRST system capability, critical certification, and testing requirements.

A-10 aircraft propulsion improvements

The budget request included \$51.8 million in PE 27131F for the continued development of the A-10 aircraft; including \$33.9 million for A-10 propulsion improvements. The Air Force intends to operate this aircraft until fiscal year 2028; and aircrews have continued to rank propulsion as a major operational deficiency. The committee recommends an increase of \$25.0 million in PE 27131F to continue the propulsion modernization effort for the A-10 aircraft.

Information systems security research

The budget request included \$109.3 million in PE 33140F, for the information systems security program. A recent National Defense University report entitled "Information Assurance: Trends in Vulnerabilities, Threats and Technologies" noted that a series of internal and external studies and policy pronouncements from the Department of Defense over the last two decades contains a basic premise, that: "the explosive changes in information technology would transform the future of military operations. The benefits of this change have been well documented but its potential vulnerabilities have been less commonly described—or addressed for corrective action." To augment the Department's work in developing solutions to information security vulnerabilities and to review associated legal and regulatory issues, the committee recommends an increase of \$3.0 million in PE 33140F, including \$2.0 million for infrastructure assurance and security research conducted in collaboration with the Air Intelligence Agency and \$1.0 million for homeland defense threat information studies and analysis of the legal and regulatory challenges involved in cyber security.

Viper Strike munition for Predator

The budget request included \$61.0 million in Research, Development, Test, and Evaluation, Air Force, for Predator UAV, in PE 35219F, for the continued development of the Predator unmanned aerial vehicle system, but did not include additional funding for the development of the Viper Strike lightweight precision munition that can be integrated onto the Predator air frame. The Viper Strike precision munition represents a transformational capability, providing pinpoint accuracy against moving, stationary, and armored targets, even in low visibility environments. The Viper Strike is an important step forward in linking powerful sensors to precision munitions to allow the rapid engagement of high-value targets on the complex 21st century battlefield. Funding would allow fielding of this important capability in the global war on terrorism to battlefield commanders in fiscal year 2006, while the Air Force establishes a program of record for future years.

The committee recommends an increase of \$5.0 million in PE 35219F, for development and early fielding of 55 Viper Strike precision munitions.

S-band radar

The budget request included \$151.1 million in PE 35910F for spacetrack, but no funding for the S-band radar.

The S-band sensor system detects and tracks all low-earth orbiting objects and is the only planned system capable of providing the information required for space situational awareness and space control. Air Force funding reductions to the space surveillance system, of which S-band radar is an important component, led to eliminating funding for S-band radar in the fiscal year 2006 budget request. The committee understands it is the intention of the Air Force to continue funding this program in fiscal years 2008 to 2011. The committee believes, therefore, that additional funding will accelerate deployment and mitigate additional system costs.

The committee recommends an increase of \$10.0 million in PE 35910F for the S-band radar project.

Space-Based Space Surveillance

The budget request included \$151.1 million in PE 35910F, for spacetrack, of which \$114.2 million is for the Space-Based Space Surveillance (SBSS) program.

The SBSS is a sensor that will conduct deep space and low-earth orbit surveillance in support of U.S. space control and situational awareness requirements. The committee notes that funding cuts in fiscal year 2005 delayed the SBSS launch for one year from 2008 to 2009, causing a potential gap in space surveillance capabilities. Additional funding for SBSS was included in the Air Force Chief of Staff's unfunded priorities list.

The committee recommends an increase of \$15.0 million in PE 35910F for SBSS to purchase long-lead hardware to support assembly, integration, and testing in fiscal year 2006.

Nano-materials manufacturing

The budget request included \$36.9 million in PE 78011F, for industrial preparedness. As research advances lead to robust com-

posite material designs assembled from the nano-scale level, manufacturing processes must develop in parallel to expedite production and use of new structures. The committee recommends an increase in PE 78011F of \$4.0 million for nano-materials manufacturing.

Air Force support systems

The budget request included \$10.3 million in PE 78611F, for support systems development. Fuel tank coatings require periodic inspection for adhesion and corrosion and may demand removal and reapplication. Current procedures are costly as well as hazardous to maintenance personnel. The committee recommends an increase of \$2.9 million in PE 78611F to complete development of a semi-autonomous robot that would replace personnel in the dangerous work inside aircraft fuel tanks and would provide cost savings, particularly in the maintenance of legacy aircraft.

The Department of Defense's pursuit of "cradle to grave" weapon systems management shows promise in improving supply chains and logistics. The committee recommends an increase of \$3.0 million in PE 78611F for an aging aircraft logistics management integrated data environment. The integrated system would enable an "as-is" depiction of the C-5/C-17 weapons systems at any given point in time. Logistics and supply chain decision-making improvements support cost savings and increased levels of readiness.

The committee further recommends an increase of \$1.0 million in PE 78611F for the aircraft systems and support infrastructure project and for research into five specific focus areas: structure and materials; avionics, electronics and software; information technology; environmental compliance; and depot industrial processes.

Personnel and pay information technology systems

The committee understands that the Department of Defense plans to begin implementing its Defense Integrated Military Human Resources System (DIMHRS) for personnel and pay in fiscal year 2006. In development since 1998, this program is intended, in part, to address long-standing problems with military personnel pay. These problems have only been exacerbated in recent years by the call-up of numerous reservists and guardsman to serve in the ongoing global war on terrorism. The DIMHRS implementation plan for a single consolidated military personnel and pay system across the entire Department is a laudable goal, long overdue, and one which the committee supports.

The first phase of the DIMHRS implementation begins in fiscal year 2006 with the Army, and is planned to continue through the end of fiscal year 2007. Additional phases, or "spirals," are still under development. However, the committee is concerned that the program is under funded by \$49.0 million in fiscal year 2006.

The committee has also been briefed on a separate effort planned within the Air Force to enhance their legacy personnel and pay system, called Personnel Service Delivery (PSD). This proposed system appears to duplicate many of the features and attributes of the DIMHRS system already under development. Additionally, the PSD program has not yet received certification from the Secretary of Defense, as required by section 332 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law

108–375). The budget request included \$16.4 million in PE 91220F and \$25.6 million in Operation and Maintenance, Air Force, for the Air Force's PSD effort.

The committee is concerned that the Air Force is continuing to invest in efforts that duplicate DIMHRS. Therefore, the committee recommends a reduction in PE 91220F, of \$16.4 million; and a reduction in Operation and Maintenance, Air Force, of \$25.6 million to eliminate funding for the PSD effort. The committee also recommends an increase in Operation and Maintenance, Defense-wide, of \$49.0 million for the DIMHRS program.

Defense-wide

Focus center research program

The budget request included no funding in PE 60111D8Z, for government/industry co-sponsorship of university research.

The committee recommends an increase of \$4.0 million in PE 60111D8Z for a component of the focus center research program managed by the Director, Defense Research and Engineering. This partnership achieved successful transition of technologies to advance capabilities of weapons systems, radars, missile seekers, and information networks. The program also supports microelectronics research and training of future scientists and engineers.

Superstructural particle evaluation

The budget request included \$72.5 million in PE 61384BP, for chemical and biological defense basic research. Basic science challenges continue to plague efforts to develop comprehensive methods for countering threats posed by chemical and biological warfare agents. The committee commends the Department of Defense for supporting basic research to address both the chemical and biological threat, and recommends an increase of \$1.85 million in PE 61384BP to accelerate promising work in superstructural particle evaluation and characterization with targeted reaction analysis (SPECTRA). This program would allow for testing of agents at the cellular level and the possible rapid development of a series of bio-protection substances. These protection methods could improve survivability and alleviate symptoms of exposure to chemical and biological warfare agents.

Chemical and biological defense applied research

The budget request included \$187.8 million in PE 62384BP, for chemical and biological defense applied research. The Department of Defense requires improved prediction models for timely monitoring of exposure to different chemical warfare agents and toxic industrial chemicals. The committee recommends an increase of \$1.2 million in PE 62384BP for an automated man-in-simulant-test (MIST) program to facilitate testing and development of a new generation of protective clothing. The new testing capability would allow for reliable reproduction of the same test and would lower test operating costs and shorten the time between tests.

The Department requires a flexible analytical tool for bio-defense to support force protection and intelligence and threat assessment activities. The committee recommends an increase of \$5.0 million in PE 62384BP for continuing research into the development of multipurpose bio-defense immuno-arrays. The immuno-arrays would allow for rapid, inexpensive characterization of new and novel pathogens and expedited development of countermeasures to biological threats, thereby enhancing force protection and threat assessment capabilities.

Current chemical and biological protective suits used by the military have deficiencies, including limited life; limited moisture vapor permeability; and the need for post-contamination containment. The committee recommends an increase of \$2.0 million in PE 62384BP for development and demonstration of self-decontaminating prototype chemical and biological protective suits, which would address some of these limitations.

One of the objectives of the applied chemical and biological research program is to develop lightweight, effective, and fast agent detectors for widespread use. The committee recommends an increase of \$2.0 million in PE 62384BP for research and development of a portable chemical/biological sensor system using quartz crystal microbalance technology. Such a system would have potential application for autonomous vehicles and individual soldiers.

Mustard gas antidote

The budget request included \$21.5 million in PE 62384BP, for medical chemical defense applied research. This program emphasizes the prevention of chemical casualties and addresses capability gaps in the area of prophylaxes for chemical warfare agents. The committee recommends an increase of \$3.0 million in PE 62384BP for mustard gas antidote research. The committee commends the Department of Defense for current research focused on a mustard gas antidote using signal transduction inhibition antioxidant liposomes (STIMAL), and notes that STIMAL research has demonstrated the ability to substantially reduce or eliminate the effects of a range of chemical and biological weapons.

Tactical technology

The budget request included \$361.6 million in PE 62702E, for tactical technology. The committee recommends a decrease of \$33.02 million in PE 62702E, including decreases of \$6.8 million in unjustified growth for two missile programs—agile interceptor and guided projectiles; \$3.42 million from the riverine crawler under-water vehicle, which would duplicate similar unmanned systems already under development; and \$4.8 million from the newly initiated preconflict anticipation and shaping program, which does not contain sufficient justification.

Human performance in hazardous environments

The budget request included \$206.5 million in PE 62716BR, for weapons of mass destruction (WMD) defeat, but no funds for a central repository of information on human vulnerabilities to, and performance in, adverse environments which result from weapons' effects. Command authorities need information regarding immediate occupational health and environmental safety implications to protect forces conducting and supporting military operations. The committee recommends an increase of \$1.0 million in PE 62716BR for demonstration and validation of emerging products, which would provide information on human performance in hazardous environments.

Technology Support Working Group

The budget request included \$55.3 million in PE 63122D8Z for combating terrorism technology support. The Technology Support Working Group (TSWG) manages efforts under this account that focus on interagency rapid prototyping research and development programs for combating terrorism technologies in response to user requirements.

Current threats underscore the need to protect bridges, tunnels, oil pipelines, and other critical infrastructures against exposure to

attack. Design engineers lack the basic structural response data for retrofit and new construction for many of these unique and important structures. The committee recommends an increase of \$8.0 million for a defense against explosive effects program to close existing capability gaps, to develop infrastructure protection guidelines, and to validate and enhance existing and new analytical tools for use by armed services and homeland defense officials.

Genetic engineering of bio-agents may provide a powerful countermeasure to bio-detection systems currently in use and in development, and may also increase vaccine and therapy defeat capabilities. The committee recommends an increase of \$3.0 million in PE 63122D8Z for the bio-engineered agent assessment tool, which has the potential to deliver a unique set of real-time chemical and biological identification and analysis capabilities, to address the threat of biological terrorism which employs engineered agents.

The committee recommends an increase of \$2.0 million in PE 63122D8Z for the development of fuel cell technologies for continuity of operations missions. Fuel cell technology has potential advantages over traditional backup power options as it could provide continuous, low maintenance, extended operation, and is useable in confined spaces.

Radiation detection technology

The budget request included \$6.6 million in PE 63160BR for proliferation prevention and defeat radiation detection technology. The committee recommends an increase of \$3.0 million in PE 63160BR for procuring glass scintillation fiber radiation detectors and developing new portable applications, including backpack detectors, panels for aircraft, and detectors included in clothing systems. The committee further recommends an increase of \$1.0 million in PE 63160BR for the development of a state-of-the-art radiation portal monitor using High Purity Germanium technology that will surpass the performance and accuracy of portal monitors currently in use. The committee notes the importance of developing higher quality, more cost-effective nuclear radiation detectors to enhance our ability to detect and identify hazardous materials that pose a proliferation threat.

Ballistic missile defense reductions

The budget request included \$136.3 million in PE 63175C for ballistic missile defense technology; \$455.2 million in PE 63889C for ballistic missile defense products; \$447.0 million in PE 63890C for ballistic missile defense systems core; and \$345.0 million in PE 63891C for special programs—MDA. The committee notes that within each of these program elements there is funding specified for activities in fiscal year 2008 and beyond that lack sufficient budget justification.

The committee recommends a decrease of \$25.0 million in PE 63175C for ballistic missile defense technology; a decrease of \$30.0 million in PE 63889C for ballistic missile defense products; a decrease of \$30.0 million in PE 63890C for ballistic missile defense systems core; and a decrease of \$50.0 million in PE 63891C for special programs—MDA.

Massively parallel optical interconnects

The budget request included \$136.0 million in PE 63175C for ballistic missile defense technology.

Massively parallel optical interconnects for micro-satellite data communications is an advanced technology that would greatly increase the reliability and precision of satellite guidance for advanced tactical missiles. The committee is aware of the key role played by satellite guided-precision munitions during Operation Iraqi Freedom, and supports efforts to improve upon this capability in a timely manner.

The committee recommends an increase of \$2.0 million in PE 63175C to enable the technology associated with massively parallel optical interconnects to advance to the deployment stage.

Missile technology

The budget request included \$75.9 million in PE 63286E, for advanced aerospace systems. The committee recommends a decrease of \$6.4 million in PE 63286E for the Long Gun program. The committee notes that this project duplicates the Navy's affordable weapon system effort, which is not yet part of long-range Navy acquisition plans. There is no validated requirement for the effort and no funding programmed in the Navy budget to transition the technology.

Anthrax and plague oral vaccine research and development

The budget request included \$63.1 million in PE 63384BP, for advanced technology development specific to medical bio-defense. The committee supports the Department of Defense's efforts under this account to develop and test safe and effective prophylaxes and therapies for pre- and post-exposure to biological threats and agents. The committee recommends an increase of \$3.75 million in PE 63384BP for Phase I clinical trials and initial production of the oral anthrax plague vaccine. This effort parallels the Department's plague vaccine development program and may provide superior protection against pneumonic plague.

Miniaturized RAMAN chemical identification system

The budget request included \$164.5 million in PE 63384BP, for the chemical and biological defense advanced technology program. The ability to rapidly characterize substances such as explosives, chemical agents, toxic industrial chemicals, narcotics, and other hazardous materials under a variety of conditions poses difficult challenges. Combining real-time, reliable sensing and identification techniques into a hand-held device has been an even more complicated task.

The committee recommends an increase of \$4.0 million in PE 63384BP for accelerated development of a small, lightweight chemical identification system, which uses the RAMAN spectroscopy technology. These additional resources are intended to ensure a power supply that lasts nearly twice as long as currently available, in a device that is under one quarter the weight but which maintains the substance identification speed of larger stationary machines.

Diminishing manufacturing sources

The budget request included \$22.4 million in PE 63712S, for general logistics research and development technology demonstrations. The military faces challenges in maintaining a supply of replacement and repair parts for legacy systems, a costly problem with readiness implications and no coordinated solution. The committee recommends an increase of \$1.5 million in PE 63712S for continuation of a project designed to create a single repository of information for addressing the diminishing manufacturing source problem.

The Department of Defense needs a capability to develop and evaluate methods and processes for manufacturing printed circuit boards with buried passive components and other advanced technologies relevant to warfighter needs. The committee recommends an increase of \$3.0 million in PE 63712S for the embedded passives research and development test bed to enable advanced domestic capability in the military crucial technology area of electronic systems.

The committee further recommends an increase of \$3.0 million in PE 63712S to support the manufacturing supply chain and for increased involvement of small- and medium-sized firms in meeting surge production requirements.

Vehicle fuel cell program

The budget request included \$22.4 million in PE 63712S, for general logistics research and development technology demonstrations. A recent Defense Logistics Agency (DLA) report entitled "Potential Use of Hydrogen as a Defense Logistics Fuel" noted that hydrogen power may offer benefits to the warfighter such as stealth and sustainment and could provide multiple potential sources of fuel. The committee recommends an increase of \$7.0 million in PE 63712S for acceleration of the Department of Defense vehicle fuel cell program, particularly in development of a hydrogen logistics fuel for use in both tactical and nontactical military vehicles. Consistent with the recommendations made by DLA, the committee directs the Secretary of Defense to establish a Hydrogen Logistics Initiative to develop a comprehensive and integrated strategy and plan for the appropriate use of hydrogen and acquisition of hydrogen to meet Department requirements for the future.

Advanced electronics

The budget request included \$214.4 million in PE 63739E, for advanced electronics. The committee recommends a decrease of \$10.0 million in PE 63739E, including decreases of \$3.0 million from the combat optical fiber technology program, which requires additional fundamental research prior to developmental work; \$5.0 million from the networked microsystems program; and \$2.0 million from the visible short wave infra-red photon counting project. These programs are new starts in fiscal year 2006. The committee recommends spending levels more appropriate for the start-up year of such programs.

Small scale systems packaging

The budget request included \$214.4 million in PE 63739E, for advanced electronics technology. Small scale systems, devices and

interconnections on the order of micro- and nano-scale in size are becoming more frequent components in military systems. Research on individual components shows promise, but efforts at integration of small scale components systems are not keeping pace with advances in research. The committee recommends an increase of \$2.0 million in PE 63739E to address challenges in packaging small scale components into systems.

Advanced ferrite antenna

The budget request included \$163.6 million in PE 63750D8Z, for advanced concept technology demonstrations. Use of the advanced ferrite antenna would allow replacement of large antennas and reduction of the antenna footprint. The committee recommends an increase of \$2.0 million in PE 63750D8Z for crossed field radiation technology to test the advanced ferrite antenna to meet Navy and military standards.

Communications and control alert framework

The budget request included \$163.6 million in PE 63750D8Z, for advanced concept technology demonstrations. The Department of Defense's complex command and control structure poses management challenges critical to the successful prosecution of any single mission. Important collaborations with other agencies and governments create further complications. The layers of permission for sharing of information, combined with time-sensitive needs to disseminate data across networks and between operating domains, presents an ideal project for exploration by the advanced concepts technology demonstration process.

The committee recommends an increase of \$4.7 million in PE 63750D8Z to bridge the gap between initial research on the command and control alert framework system and full accomplishment of design objectives for testing of a comprehensive, flexible data-sharing system. The alert system would allow local data managers to control information access and would enable participants to filter data streams and reduce information overload.

Flexible JP-8 military fuel certification

The budget request included \$163.6 million in PE 63750D8Z, for advanced concept technology demonstrations. The Department of Defense continues to support efforts aimed at near- and far-term solutions for energy sources, particularly those for transportation. One such research program involves development of a clean jet fuel source. In support of efforts to examine new forms of energy and to meet the Department's clean fuel targets, the committee recommends an increase of \$18.0 million in PE 63750D8Z for final certification of a flexible JP-8 military fuel pilot program to facilitate transition to an advanced concept technology demonstration.

Prevention and detection of cyber threats

The budget request included \$189.8 million in PE 63755D8Z, for the high performance computing modernization program. The President's Information Technology Advisory Committee noted in a February 2005 report entitled "Cyber Security: A Crisis of Prioritization" that "the information technology infrastructure of

the United States, which is now vital for communication, commerce, and control of our physical infrastructure, is highly vulnerable to terrorist and criminal attacks.” The Department of Defense uses networks to communicate with bases, research facilities, and other installations. These networks are vulnerable to a number of types of attack that could be used to break into communication lines and to substitute false information for authentic commands. The committee recommends an increase of \$1.5 million in PE 63755D8Z to support increased research into addressing cyber-based emerging threats and growing challenges presented by various forms of computer-facilitated attack.

Simulation center upgrade

The budget request included \$189.8 million in PE 63755D8Z, for the high performance computing modernization program. The Department of Defense must possess the latest, state-of-the-art computing equipment and capabilities, particularly for the processing and storage of classified data. While the Department has requested funds to operate facilities charged with development, testing, and integration of strategic defense technologies and simulations, no funding is requested for equipment upgrades. The committee recommends an increase of \$3.5 million in PE 63755D8Z for upgrades to the Space and Missile Defense Command simulation center to meet computational demands for end-to-end simulation, testing, and evaluation of advanced interceptors and sensors.

Land warfare technology

The budget request included \$139.1 million in PE 63764E, for land warfare technology. The committee recommends a decrease of \$47.0 million in PE 63764E due to unjustified program growth and excessive funding levels for new starts. Specifically, the committee recommends decreases of \$15.0 million in the future combat systems support program, which would have increased by 66 percent in one year under the budget request; \$6.0 million in the multimodal missile program, for which \$12.4 million was requested for a program in the concept stage; \$6.0 million from a non-lethal weapons program new start, which should more closely follow the needs of the Joint Non-Lethal Weapons Directorate; and \$6.0 million from the tactical urban operations program, to promote an effort more focused specifically on the particular needs of the urban warfighter.

Network centric warfare technology

The budget request included \$136.9 million in PE 63766E, for network centric warfare technology. The committee recommends a decrease of \$3.0 million in PE 63766E from the multi-dimensional mobility robot program, a newly initiated program that duplicates other unmanned ground equipment development programs.

Sensor technology

The budget request included \$189.5 million in PE 63767E, for sensor technology. The committee recommends a decrease of \$5.0 million in PE 63767E from the network centric sensing engage-

ment programs, due to unjustified program growth and duplication of ongoing sensor integration work.

Advanced tactical laser

The budget request included \$61.8 million in Research, Development, Test, and Evaluation, Defense-wide, for Special Operations Advanced Technology Development, in PE 116407BB, for continuing development of the advanced tactical laser (ATL).

The ATL Advanced Concepts Technology Demonstration is a long-standing effort to weaponize directed energy technology into an existing tactical platform. While a potentially promising concept, the program has faced formidable technical challenges and continues to encounter new challenges, especially in the area of power generation to satisfy the high energy requirements to power the weapon system. Proposed funding for the program has increased considerably in fiscal year 2006, and is inconsistent with the technical challenges remaining to be solved before the program can move forward.

The committee recommends a decrease of \$15.0 million in PE116407BB, while the goals of the program are realigned and remaining technical challenges associated with the advanced tactical laser program are addressed.

Mark V patrol boat replacement craft prototype

The budget request included \$104.3 million in Research, Development, Test, and Evaluation, Defense-wide, for Special Operations Advanced Technology Development, in PE 116402BB, but did not include funding to complete the development, testing, and evaluation of the Mark V patrol boat replacement craft prototype.

The Mark V patrol boat is an important component of the Naval Special Warfare Command's overall special operations capabilities, but has proven to be very hard on the special operators who operate the boat or utilize it for insertion and extraction of special operations forces. The incidence of stress fractures and spinal injuries associated with the rough ride of a Mark V operating in medium to heavy seas has been very high. The Commander, U.S. Special Operations Command, has expressed concerns and initiated actions to improve the performance of the current Mark V through the introduction of shock-mitigating seats and to begin development of a replacement craft. A new design has been developed and a prototype craft incorporating composite technologies, shock-mitigation techniques, and improved hull design is near completion. Additional funding is required to complete testing, and evaluation of the prototype craft.

The committee recommends an increase of \$1.5 million in PE 116402BB, for final development, testing, and evaluation of the Mark V patrol boat replacement craft prototype.

Special operations portable power source program

The budget request did not include funding for the development of solid oxide fuel cell systems for special operators. Such systems are designed to reduce the weight burden of batteries by a factor of 10. Current battery systems are large and heavy, burdening the

logistical chain, and limiting operators and the flight ranges of their unmanned aerial vehicles.

The committee recommends an increase of \$5.0 million in Research, Development, Test, and Evaluation, Defense-wide, for Special Operations Advanced Technology Development, in PE 116402BB, for the portable power source program.

Voice activated handheld translator

The budget request did not include funding for the development of a voice activated handheld translator for special operations forces. This technology, deployed in Afghanistan in 2002, allows special operators to communicate with local populations when they do not speak the local language or have a reliable linguist with them. Research is required to refine, test, and demonstrate the translator capabilities, including two-way translation.

The committee recommends an increase of \$2.3 million in Research, Development, Test, and Evaluation, Defense-wide, for Special Operations Advanced Technology Development, in PE 116408BB, for development of a voice activated handheld translator.

Aegis ballistic missile defense

The budget request included \$3.3 billion in PE 63882C for the ballistic missile defense midcourse defense segment, of which approximately \$811.2 million is included for the Aegis ballistic missile defense (BMD) system.

The Aegis BMD element is intended to provide U.S. surface combatants the capability to detect, track, intercept, and destroy short-to intermediate-range ballistic missiles in the ascent, midcourse, and terminal phases of flight. The committee notes that the Aegis BMD system has demonstrated capability through a rigorous test program that includes five out of six successful flight intercepts of short-range ballistic missiles between 2002 and 2005, with the last test conducted under operationally realistic conditions.

Aegis BMD will provide missile defense protection for U.S. deployed forces, allies, and friends against the most imminent threats. The Commander, U.S. Pacific Command testified in March 2005 before the Committee on Armed Services that: (1) the threat posed by ballistic missiles in his area of responsibility is growing; (2) a capability to protect our forces with an effective tiered system against ballistic missiles remains “a key capability for the future and is a top priority for development;” and (3) our production inventory of PAC-3s and SM-3 missiles “must pace the increasing threat.”

The committee recommends an increase of \$75.0 million in PE 63882C for improvements to the Aegis BMD system and to accelerate production of SM-3 missiles. The committee makes these recommendations in light of the successful Aegis BMD test program and mindful of the importance of keeping pace with the growing threat. The committee directs that these funds be used to: (1) purchase long-lead materials for the Aegis BMD signal processor to provide significant system discrimination capabilities against missiles with separating warheads; (2) purchase additional test equipment necessary to accelerate SM-3 missile production rates; (3)

provide long-lead funding for an additional 15 SM-3 missiles to begin delivery in fiscal year 2007; (4) accelerate implementation of the engage-on-remote and launch-on-remote upgrades; and (5) accelerate integration of the two-color seeker for the SM-3 kill vehicle.

Ground-based midcourse ballistic missile defense

The budget request included \$3.3 billion in PE 63882C for the ballistic missile defense midcourse segment, of which approximately \$2.3 billion is for the ground-based midcourse defense (GMD) segment to cover continued development, ground and flight testing, fielding, and support.

Consistent with the National Missile Defense Act of 1999 (Public Law 106-38), the committee continues to support fielding of the GMD element as part of the missile defense test bed and for use in an emergency. The committee notes that the Commander, U.S. Strategic Command, and the Department of Defense Director for Operational Test and Evaluation endorse this dual-use approach for continuing development and fielding of this important defensive capability.

The committee is aware of the successful flight intercept tests achieved by the developmental prototype ground-based interceptor over the past five years. The committee is concerned, however, about the inability of the Missile Defense Agency (MDA) to complete two recent GMD flight tests, using the operationally configured interceptor, as well as the lengthy turnaround time for GMD tests. This seems to indicate, according to the acting Director for Operational Test and Evaluation, that “there is a quality problem.” The committee commends the Director of the MDA for establishing an Independent Review Team to assess recent test failures and to improve mission assurance. According to the preliminary findings of the review team, as recounted by the Director of MDA during an April 7, 2005, hearing of the Subcommittee on Strategic Forces of the Committee on Armed Services, MDA needs to pay greater attention to the test certification process and devote more resources to integrated ground testing.

The committee recommends an increase of \$100.0 million in PE 63882C specifically to enhance the testing program for the GMD element in accordance with the findings of the Independent Review Team. The committee directs that these funds be used toward purchases of additional ground test missile units, enhanced integrated ground test capabilities, more comprehensive component testing, and other items for GMD testing. The Director of the MDA is to provide a report to the congressional defense committees by January 15, 2006, indicating specifically how this increase will be allocated.

Miniaturized carbon monoxide oxidation technology

The budget request included \$100.8 million in PE 63884BP, for chemical and biological defense advanced technology demonstrations. Urban and other combat environments often produce situations in which warfighters confront fire and carbon monoxide (CO) threats such as in caves, bunkers, tunnels, burning oil wells, aircraft, vehicles, or structures and buildings. The Department of De-

fense currently lacks gas mask canisters or small escape devices that contain CO filters and protection. A small, lightweight, long-lasting CO removal technology would increase protection and utility of existing systems and would add value to new systems under development. The committee recommends an increase of \$4.3 million in PE 63884BP to complete testing, development, and evaluation of the Mini-COT technology to meet the Department of Defense's need for CO protection.

Airborne Infrared System

The budget request included \$529.8 million in PE 63884C for ballistic missile defense sensors, but no funding for the Airborne Infrared System (AIRS).

AIRS is a system of infrared and visible sensors, a surveillance radar and adjunct data processing and storage that can track ballistic missiles and their warheads in all phases of flight. The committee believes that such a system, if and when deployed, could provide important test, operational, and technical intelligence capabilities in support of ballistic missile defense.

The committee recommends an increase of \$10.0 million in PE 63884C for AIRS research and development. This increase will allow the Missile Defense Agency to proceed with final engineering development and "in-line" demonstrations of system connectivity, a closed loop fire control system, and prototype design for integration on manned or unmanned vehicles.

Kinetic Energy Interceptor

The budget request included \$229.7 million in PE 63886C for Ballistic Missile Defense System Interceptors, of which \$218.7 million is for Kinetic Energy Interceptor (KEI) block 2010/2012.

The committee notes that the KEI effort has been restructured to serve as risk mitigation for the Airborne Laser (ABL), which has been chosen as the primary boost-phase intercept program. Accordingly, the Missile Defense Agency (MDA) has reduced funding for KEI by approximately \$883.0 million in fiscal year 2006 and \$5.0 billion over fiscal years 2006–2009. MDA has built into the KEI program a one-year delay in first flight to fiscal year 2008 in order to focus efforts on demonstrating critical technologies and reducing development risks. This new flight test date coincides with the plans of the MDA for a lethal shoot down of a target missile with ABL. The committee understands that should ABL fail to demonstrate a lethal shoot down in fiscal year 2008, a decision could be made at that point to switch to KEI as the primary boost-phase interceptor.

In light of the decision by the MDA to focus on ABL as the prime boost-phase defense system, the committee believes the funding request for KEI risk reduction efforts is excessive. The committee recommends a decrease of \$50.0 million in PE 63886C for KEI; and recommends that remaining funds be directed toward reducing high-risk technology challenges in the areas of booster thrust, differentiating between plume and missile hard body, and thrust vector control.

Military mail screening system development and demonstration

The budget request included \$280.9 million in PE 604384BP for chemical/biological defense system development and demonstration. The committee recommends an increase of \$1.8 million in PE 604384BP to validate system design and performance for fielded chemical agent detection and biological agent sampling systems to be used at military mail centers and post offices.

Elsewhere in this report, the committee recommends a provision that would require the Secretary of Defense to promptly develop and implement a plan to ensure that mail within the military mail system is safe for delivery, to include the screening of all mail in order to detect the presence of biological, chemical or radiological weapons, agents or pathogens, or explosive devices. The committee recommends authorizing additional funding for this purpose in fiscal year 2006 to ensure that resources are available to begin implementation of the plan as soon as possible.

UAV systems and operations validation program

The budget request included \$128.8 million in PE 64940D8Z, for central test and evaluation investment development. Testing of unmanned aerial vehicles (UAVs) for autonomous control and safety in piloted airspace would allow for full operational use of these systems in evolving battlefields that require both manned and unmanned air support. The committee recommends an increase of \$5.0 million in PE 64940D8Z for UAV systems and operations validation program to facilitate short- and long-range flight testing of autonomous systems.

Foreign supplier assessment center

The budget request included \$35.7 million in Research, Development, Test, and Evaluation, Defense-wide, for foreign comparative testing, but did not include funding for the Foreign Supplier Assessment Center (FSAC) concept.

The FSAC concept was established to assess potential foreign suppliers wanting to provide products and services, including components for weapon systems, automation hardware, and various forms of software to the Department of Defense. The FSAC is fulfilling a critical need to identify and categorize potential foreign suppliers; conduct tests and evaluation of products and services for appropriate security purposes; and develop recommendations and risk mitigation plans. However, the full requirement to assess foreign supplier of critical defense components will not be realized without significant additional investment.

The committee recommends an increase of \$10.0 million in PE 65710D8Z, for the continued expansion and operation of the FSAC concept.

Operationally responsive space payloads

The budget request included \$19.9 million in PE 65799D8Z for the Office of Force Transformation in the Office of the Secretary of Defense.

As noted in the Senate report accompanying S. 2400 (S. Rept. 108–260) of the National Defense Authorization Act for Fiscal Year

2005, the committee believes that acquisition of inexpensive launch vehicles and smaller satellites provide the promise of enhancing the effectiveness of U.S. military and intelligence space operations and mitigating some of the long-standing development problems that have afflicted U.S. space programs over the past decade. In support of this effort, OFT has sponsored the development of experimental satellites intended to demonstrate the rapid design and fabrication of operationally useful satellite payloads.

The committee notes that insufficient funding is requested for fiscal year 2006 to continue development of a modular, standard bus and complete the experimentation necessary to demonstrate tactical satellite capabilities. The committee recommends an increase of \$20.0 million dollars in PE 65799D8Z for the development of operationally responsive payloads, to include funding for payloads, satellite busses, integration, command and control, and joint warfighter experimentation.

Section 913 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108–375) directed the Secretary of Defense to create a separate, dedicated program element for operationally responsive national security payloads and buses. The committee notes that such a program element was not included in the fiscal year 2006 budget request, but has subsequently been created by the Department of Defense as PE 62001D8Z with the title: joint operational small satellites. The committee fully expects that the \$20.0 million increase in PE 65799D8Z will be applied toward PE 62001D8Z for the funding of responsive satellites to provide direct support to the joint operational and tactical level warfighter.

Industrial preparedness

The budget request included \$18.2 million in PE 78011S, for industrial preparedness. The committee notes that the laser additive manufacturing process rapidly produced titanium wing pylons to replace aluminum parts, which experienced mechanical problems during sustained combat operations. The committee recommends an increase of \$5.0 million in PE 78011S for application of the laser additive manufacturing process to repair parts and to produce new parts for other aerospace-grade components that face similar degradation. The current processes and materials used for production of these parts are time consuming, expensive, and require long-lead times, which may negatively impact readiness.

The committee further recommends an increase of \$1.5 million in PE 78011S for research on improved manufacturing processes for defense-related technologies, including sensors, energy systems, and nanotechnology.

Special operations wireless management and control project

The budget request included \$33.2 million in Research, Development, Test, and Evaluation, Defense-wide, for Special Operations Intelligence Systems Development, in PE 116405BB, including \$11.7 million for the Joint Threat Warning System (JTWS), but did not include funding to develop new capabilities for the JTWS in the evolving wireless communications environment.

The special operations wireless management and control project will continue development of capabilities that can be integrated into the JTWS to provide special operations forces with tactical capabilities to maintain situational awareness of the wireless communications environment being used by potential adversaries. The JTWS is one of the highest priorities for the Commander, U.S. Special Operations Command, for additional funding.

The committee recommends an increase of \$2.5 million in PE 116405BB, to continue development of a wireless management and control capability for the JTWS.

Maritime unmanned aerial vehicle sensor

The budget request included \$66.3 million in Research, Development, Test, and Evaluation, Defense-wide, for Special Operations Forces (SOF) Operational Enhancements, in PE 116408BB, but did not include funding to develop new sensor capabilities for the maritime unmanned aerial vehicle (MUAV).

An urgent requirement for a new signals intelligence sensor for the MUAV was validated after submission of the fiscal year 2006 President's budget request. This sensor would provide a critical new capability for the MUAV and enhance the operational effectiveness of SOF. This MUAV is one of the highest priorities of the Commander, U.S. Special Operations Command, for additional funding.

The committee recommends an increase of \$4.9 million in PE 116408BB, for the development of a MUAV sensor.

Lightweight portable solar panels

The budget request did not include funding for lightweight portable solar panels. These flexible lightweight panels serve as portable chargers, converting sunlight to electricity to keep batteries constantly charged. This eliminates the need for operators to carry heavy battery packs during emergency and remote operations. The rugged folding panels are easy to carry and deploy, and they provide power even if damaged, or employed in partial shade.

The committee recommends an increase of \$2.5 million in Research, Development, Test, and Evaluation, Defense-wide, for Special Operations Forces Operational Enhancements, in PE 116408BB, for lightweight solar panels.

Items of Special Interest

Canopy hard-coats

The committee believes that industry has made a marked advancement in the development of canopy hard-coats that may significantly extend the life and reduce the cost of canopies used on naval aircraft. Therefore, the committee urges the Secretary of the Navy to accelerate the testing of new canopy hard-coats currently in development under the auspices of the Patuxent Naval Air Station Materials Laboratory. Furthermore, the committee directs the Secretary to evaluate these hard-coats on canopies provided by Navy canopy suppliers.

CH-53X helicopter development

The committee recognizes the essential contribution that heavy-lift assets make both in wartime and peacetime and is concerned by the intense usage of current assets in Afghanistan, the Horn of Africa, and Iraq. In 2003, an independent analysis of alternatives concluded that a program to remanufacture the existing aircraft would cause the Navy to shut down one-third of the Marine Corps heavy-lift squadrons for up to 5 years due to the number of aircraft that would be diverted from fleet squadrons to the remanufacturing program. The Navy decided to pursue a new production strategy in accordance with that recommendation.

The Joint Requirements Oversight Council approved a CH-53X operational requirements document on December 9, 2004. Marine Corps witnesses testified before the Committee on Armed Services that the CH-53X is an urgent warfighting requirement, that all alternatives have been analyzed, and that there are no other suitable alternatives to new manufacture of the CH-53X.

The committee supports the requirement for CH-53X new production program but has concerns regarding program execution and schedule. The Department of Defense Appropriations Act for Fiscal Year 2005 (Public Law 108-287) appropriated \$102.3 million for a risk reduction initiative in the CH-53X development program. Since March 18, 2005, the Assistant Secretary of the Navy for Research, Development, and Acquisition (ASN (RDA)) has released roughly \$50.0 million of these funds. The ASN (RDA) is withholding the remaining funds until an independent review team can assess whether the funding in the Future Years Defense Program is sufficient to execute the CH-53X program.

The committee supports this program. However, the committee is concerned that the Navy is not moving aggressively to execute risk reduction actions, thus potentially delaying the fielding of this critical system. The committee also appreciates the concerns expressed by the ASN (RDA) about program affordability. The committee, therefore, encourages the Navy to move expeditiously to resolve these concerns and to release the remaining \$52.3 million in risk reduction funding so that the requested fiscal year 2006 program can be completed.

Construction of Navy Research Vessels

The budget request included \$356.9 million in PE 61153N, for defense research sciences, including \$4.0 million for design of the next generation of ocean research vessels for the University National Ocean Laboratory (UNOLS) fleet. The academic research community uses UNOLS to conduct experiments and research for the Navy. The committee is concerned with the Navy's plans to fund the construction of academic research vessels in the basic science account in fiscal year 2007. While the ocean class research vessel, a key research tool, provides the Navy with a robust understanding of its battlespace, such diversion of research funds would adversely affect the goals of the innovative research account.

The committee authorizes the \$4.0 million requested in PE 61153N for design of the new research vessel in fiscal year 2006, but directs the Navy to request the planned \$25.0 million in fiscal year 2007 for ship construction funds in the Navy Shipbuilding and

Conversion account. The committee expects that the Navy will continue to use the Shipbuilding and Conversion account to provide for the recapitalization of ocean class research vessels in the Future Years Defense Program.

Department of Defense computer science research

The committee is concerned that the Department of Defense is reducing its investment in long-term computer science research, without due consideration of the potential negative ramifications of such reductions on the development of next generation networking, information technology, and information assurance systems on which our military will depend in the future. The committee notes that the President's Information Technology Advisory Committee and the Defense Science Board have both released reports this year that call attention to the potential impacts of reduced funding on the part of the Department in fundamental computer science.

The committee directs the Undersecretary of Defense for Acquisition, Logistics and Technology to carefully examine the long-term practical and policy implications of the Department's investment strategy for computing research and to provide the outcome of this review to the congressional defense committees with the fiscal year 2007 budget request. The review should include an explanation of the Department's role in the overall federal computing research portfolio and a review of the Department's structure and investment plan for these programs.

Unmanned aerial vehicles for resupply missions

The committee notes that dedicated unmanned aerial vehicles for movement of equipment and supplies could support Army expeditionary forces while reducing logistics, procurement, and operational costs. The committee directs the Secretary of the Army to provide to the congressional defense committees by April 1, 2006, a report on the requirements, technical feasibility, and cost of integrating unmanned aerial vehicles for resupply into its future force unmanned aviation concepts.

TITLE III—OPERATION AND MAINTENANCE

Explanation of tables

The following tables provide the program-level detailed guidance for the funding authorized in title III of this Act. The tables also display the funding requested by the administration in the fiscal year 2006 budget request for operation and maintenance programs, and indicate those programs for which the committee either increased or decreased the requested amounts. As in the past, the administration may not exceed the authorized amounts (as set forth in the tables or, if unchanged from the administration request, as set forth in budget justification documents of the Department of Defense), without a reprogramming action in accordance with established procedures. Unless noted in this report, funding changes to the budget request are made without prejudice.

Subtitle A—Authorization of Appropriations**Subtitle B—Environmental Provisions****Elimination and simplification of certain items required in the annual report on environmental quality programs and other environmental activities (sec. 311)**

The committee recommends a provision that would modify section 2706 of title 10, United States Code, to eliminate and simplify portions of the annual report on environmental quality programs and other environmental activities. The recommended changes would remove the requirement to list planned or ongoing projects which exceed \$1.5 million dollars. The reporting of fines and penalties against the Department of Defense would be simplified to a trend analysis and a list of all such fines or penalties that exceed \$500,000. The recommended changes would also simplify the reporting of the amounts expended and expected to be expended for environmental activities overseas.

The committee believes that these modifications will make the gathering and reporting of the data less burdensome and more efficient while still maintaining the necessary detail to ensure adequate oversight.

Payment of certain private cleanup costs in connection with the Defense Environmental Restoration Program (sec. 312)

The committee recommends a provision that would allow the Secretary of Defense to execute environmental restoration agreements with owners of covenant properties. Under section 120(h) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980, title 42, United States Code section 9620(h), the United States is required to provide a deed covenant guaranteeing it will perform remediation of contamination discovered after a property transfer. Therefore, the Department of Defense has permanent, irrevocable liability for cleanup of any contamination on former Department property that was unknown and discovered after the transfer. However, there is no current authority for the Department to pay a land owner their costs for undertaking remedial action on their own.

Currently, when an owner discovers contamination on their covenant property, they must notify the service from which they purchased the covenant property. The services then respond to each covenant property in the order of risk and health-based prioritization. This leaves many landowners without an efficient remedy and the potential burden and cost of pursuing a remedy in court. The owner may be forced to choose this latter approach if they have already cleaned up the covenant property, and they are seeking to be reimbursed. This approach can be more expensive to U.S. taxpayers, since the covenant property owner may cleanup the site to standards beyond what is necessary or appropriate and then seek full reimbursement in the courts.

The committee recognizes that potential land purchasers, such as developers, are becoming increasingly apprehensive about purchasing former Department property. This may threaten the suc-

cessful transfer of the Department's inventory after the 2005 Base Realignment and Closure round and frustrate economic redevelopment efforts. This provision would allow the Department to enter into agreements with the owners of covenant property. The covenant property owner can accept the agreement or not, at their discretion. The agreement would set out the process the landowner would follow if contamination is later found on the covenant property. The agreement would resolve such issues as: notice to the Federal Government, time limits to reply, cleanup standards to be used (although the agreement may not change the cleanup standards applicable to the site as established by law), and the reimbursement process.

Subtitle C—Other Matters

Aircraft carriers (sec. 321)

The committee recommends a provision that would make \$288.0 million of Operation & Maintenance, Navy (OMN) from this or any other act, for fiscal years 2005 and 2006, available only for repair and maintenance to extend the life of the USS *John F. Kennedy*.

The provision would also prohibit the Secretary of the Navy from reducing the number of active aircraft carriers in the Navy below 12 until the later of: (1) 180 days after the next Quadrennial Defense Review is delivered to Congress; or (2) the date on which the Secretary of Defense, in consultation with the Chairman of the Joint Chiefs of Staff, certifies to the congressional defense committees that such agreements have been entered into to provide port facilities for the permanent forward deployment of the number of aircraft carriers necessary in the Pacific Command (PACOM) area of responsibility (AOR) to fulfill PACOM roles and missions, including agreements for the forward deployment of a nuclear aircraft carrier after the retirement of the current two conventional aircraft carriers. The provision would also define an active aircraft carrier to include an aircraft carrier that is temporarily unavailable for worldwide deployment due to routine or scheduled maintenance.

The committee is concerned that the Navy's decision to reduce the number of aircraft carriers from 12 to 11 was not based on careful and thorough analysis, but rather was budget-driven. In testimony before the Committee on Armed Services in February 2005, the Chief of Naval Operations testified that when he first submitted the proposed Navy budget for fiscal year 2006, it included 12 aircraft carriers. Further, the last two Quadrennial Defense Reviews, in 1997 and 2001, both supported a force structure of 12 aircraft carriers. The reduction to 11 aircraft carriers was made after the Office of Management and Budget directed a budget cut for the Department of Defense.

The committee is also aware of the importance of permanent forward deployment of at least one aircraft carrier in the PACOM AOR. The USS *Kitty Hawk*, permanently forward deployed in Yokosuka, Japan, is scheduled for retirement in fiscal year 2008. The only other conventionally-powered aircraft carrier is the USS *John F. Kennedy*. The USS *John F. Kennedy* was scheduled to begin a complex overhaul (COH) maintenance period in fiscal year 2005, and funds for this COH were authorized and appropriated in

fiscal year 2005 for this purpose. The ongoing Integrated Global Presence and Basing Strategy review might also expand the permanent forward deployment requirements for aircraft carriers, particularly in the PACOM AOR.

The committee believes it is prudent for the USS *John F. Kennedy* to receive its COH and that 12 aircraft carriers remain in the U.S. Navy until such time as an in-depth analysis is conducted and forward-basing agreements are reached.

Limitation on transition of funding for east coast shipyards from funding through Navy working capital fund to direct funding (sec. 322)

The committee recommends a provision that would limit the Secretary of the Navy from using direct funding for east coast Naval shipyards. The Navy would be required to continue funding these shipyards through the Navy Working Capital Fund until the later of 6 months after the congressional defense committees receive a complete report on the use of direct funding at the Puget Sound Naval Shipyard, or October 1, 2006.

During fiscal year 2003, the Navy changed the way workload was budgeted and paid for at the Puget Sound Naval Shipyard, despite the committee's concerns, as outlined in the Senate report accompanying S. 1050 (S. Rpt. 108-46) of the National Defense Authorization Act for Fiscal Year 2004. The committee understands that the Navy intends to transition the east coast shipyards out of the Working Capital Fund and begin direct, or mission, funding in the near future. However, the effects of the transition of the Puget Sound Naval Shipyard out of the Navy's Working Capital Fund have not been adequately studied. While it appears that consolidating intermediate level and depot maintenance activities may have economic benefits, the Navy has not fully examined the Puget Sound pilot program.

Before any action is taken with regard to changing funding for the east coast shipyards, the committee requires that the Secretary shall submit to the congressional defense committees a study describing the lessons learned and costs and benefits of transferring the Puget Sound Naval Shipyard to direct funding.

Use of funds from National Defense Sealift Fund to exercise purchase options on maritime prepositioning ship vessels (sec. 323)

The committee recommends a provision that would authorize the Secretary of Defense to obligate and expend any funds in the National Defense Sealift Fund to exercise options to purchase those three maritime prepositioning ships (MPS) whose current charters expire in calendar year 2009. This authorization is granted notwithstanding the provisions of section 2218(f)1 of title 10, United States Code.

The budget request included \$1,648.5 million for the National Defense Sealift Fund, including \$749.8 million for the buyout of 13 MPS leases in fiscal year 2006.

The committee notes that the time remaining on the leases of these 13 ships varies between four and six years, and does not see the urgency of buying out all of the leases at this time. The com-

mittee recommends buyouts of only those leases that expire in calendar year 2009, and recommends a decrease of \$637.2 million from the National Defense Sealift Fund. The committee recommends an increase of \$127.6 million in Operation and Maintenance, Navy, for the continued lease of the other 10 MPS vessels.

Purchase and destruction of weapons overseas (sec. 324)

The committee recommends a provision that would authorize the use of Department of Defense operation and maintenance funds to purchase weapons overseas from any person, foreign government, international organization, or other entity, for the purpose of protecting U.S. forces engaged in military operations overseas. The provision would permit the destruction of the purchased weapons. The provision would also require the Secretary of Defense to promptly notify the congressional defense committees of any use of this authority.

This provision would clarify the authority of the Department to purchase weapons in foreign countries where U.S. Armed Forces are engaged in military operations, when such a program is undertaken for force protection purposes. Providing this authority would eliminate the need for the Department to use its “emergency and extraordinary expense” authority to fund such programs. The committee believes that providing clear statutory authority to the Department to conduct such programs is desirable, given the security environment in Afghanistan and Iraq and the need to respond promptly to similar threats elsewhere in prosecuting the global war on terrorism.

Increase in maximum contract amount for procurement of supplies and services from exchange stores outside the United States (sec. 325)

The committee recommends a provision that would increase from \$50,000 to \$100,000 the dollar limit for purchases by defense entities from military exchanges for goods and services outside the United States. This proposal would help ensure a readily available source of supplies for military entities, especially during times of emergency.

Extension of authority to provide logistics support and services for weapon systems contractors (sec. 326)

The committee recommends a provision that would extend by 3 years the authority under section 365 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 (Public Law 107–314) by which the Defense Logistics Agency could provide logistics support and services to a contractor in support of its performance on a contract for the construction, modification, or maintenance of a weapons system. The authority granted expires on September 30, 2007. Section 365 required the Secretary of Defense to issue regulations before the granted authority could be used; and these regulations currently are in the process of being finalized. Moving the expiration date to 2010 would correspond to the original 5-year pilot period envisioned under section 365.

Army training strategy (sec. 327)

In order to increase flexibility, responsiveness, jointness, and versatility, the Army is reorganizing the Active and Reserve component force structure into a brigade-based force. According to the Army, this initiative, referred to as “Modularity,” will ensure land-force dominance across the full spectrum of contemporary and future operations. The Army anticipates completing reorganization of combat brigades by 2007 and the reorganization of functional supporting brigades sometime thereafter.

The committee notes, however, that the current unit training strategy and the resources that support that strategy continue to be division-based. For example, the current capacity of the combat training centers does not meet the planned requirements for a brigade-based force that will have at least 82 maneuver brigades and an additional number of functional supporting brigades to be determined by the Army.

A clear unit training strategy, with well-defined goals and requirements, for the Modular force is essential in order to ensure Army readiness. Therefore, the committee recommends a provision that would direct the Secretary of the Army to develop and implement a training strategy for the Modular force. The provision would also require the Secretary to submit a report to the congressional defense committees not later than one year after the date of enactment of this Act on the requirements to be fulfilled in order to implement the Army’s training strategy for the Modular force. The report shall include the following: (1) a discussion of the training strategy, including a description of performance goals and metrics; (2) a discussion and description of the training range requirements necessary to implement the training strategy; (3) a discussion and description of the training aids, devices, simulations, and simulators necessary to implement the training strategy; (4) a list of the funding requirements, itemized by fiscal year and specified in a format consistent with the Future Years Defense Program to accompany the President’s budget, necessary to resource range requirements and necessary to provide training aids, devices, simulations, and simulators; (5) a schedule for the implementation of the training strategy; and (6) a discussion of the challenges that the Army anticipates in the implementation of the training strategy.

Finally, the provision would direct the Comptroller General to monitor the implementation of the training strategy and to submit a report to the congressional defense committees not later than 18 months after the date of the enactment of this Act. The report shall contain an assessment of the progress of the Army to implement the training strategy.

Limitations on financial management improvement and audit initiatives within the Department of Defense (sec. 328)

The committee recommends a provision that would prohibit the Department of Defense from obligating or expending any funds for activities related to the Department’s financial management improvement effort until the Secretary of Defense submits to the congressional defense committees an integrated and comprehensive fi-

nancial management plan and a determination that each activity proposed to be funded would likely result in real and sustainable improvements in the Department's financial management systems and controls.

The committee believes that the most effective way to fix the Department's financial management problems is to attack the problems at the root, by fixing the Department's business systems and processes so that they provide timely, reliable, and complete data for management purposes. Although senior Department officials have consistently agreed with this assessment, the Department has requested hundreds of millions of dollars to hire auditors, with the stated objective of achieving an auditable financial statement by fiscal year 2007—long before the Department will be able to address the problems with its business systems and processes.

By requiring that the Department pursue audit activities only in accordance with a comprehensive financial management improvement plan that coordinates such activities with needed systems improvements, the provision recommended by the committee would ensure that the Department first addresses the underlying problems with its systems and processes.

Study on use of ethanol fuel (sec. 329)

The committee recommends a provision that would direct the Secretary of Defense to conduct a study on the use of ethanol fuel in the military services and defense agencies. The study shall include: an evaluation of the historical use of ethanol fuel by the military services and defense agencies, including the quantity of ethanol fuel procured by the Department of Defense for the services and defense agencies during the five-year period ending on the date of the study; a forecast of ethanol fuel requirements for the military services and defense agencies for fiscal years 2007 through 2012; an assessment of the current and future commercial availability of ethanol fuel, to include production, storage, transportation, distribution, and commercial sale of such fuel; an assessment of the use by the military services and defense agencies of the ethanol fuel commercial infrastructure; a review of the actions of the Department to coordinate with State, local and private entities to support the expansion and use by the military services and defense agencies of public access alternative fuel refueling stations that are accessible to the public; and an assessment of the existing fueling infrastructure on military installations in the United States, including storage and distribution capabilities, which could be adapted or converted to the delivery of ethanol fuel use, the cost of such conversion, and the feasibility and advisability of such conversion. The provision would direct the Secretary to submit a report on the results of the study to the congressional defense committees not later than February 1, 2006.

The committee notes that Department policy provides for the acquisition of alternative fuel vehicles, including ethanol fuel-capable vehicles. The committee also notes that ethanol fuel consumption by the military services and defense agencies increased by 25 percent from fiscal year 2003 to 2004. Despite this increase, the committee is concerned that there are a number of challenges that may be limiting the availability of ethanol fuel for the military services

and defense agencies. As a result, the Department may not be fully achieving reductions in petroleum consumption with the 25,000 ethanol fuel-capable vehicles in the Department's inventory.

BUDGET ITEMS

Other Defense Programs

Enhanced vision

The budget request included no funding in PE63115HP, for enhanced vision technology for the Defense Health Program. The committee is aware that the Surgeon General of the Air Force has a requirement for application of enhanced vision technology to provide improved visual capability to military pilots in the form of goggles or glasses. Enhanced vision technology has been shown to be capable of improving human vision capability beyond 20/20, potentially to the theoretical limits of human vision.

The committee recommends an increase of \$5.0 million in PE63115HP for enhanced vision technology for the Defense Health Program. The committee expects that this increase will be used for extension of proven enhanced vision technology for military aerospace applications.

Assembled Chemical Weapons Alternatives Program

The budget request included \$33.0 million for the Assembled Chemical Weapons Alternatives (ACWA) Chemical Demilitarization research and development program. The committee recommends an increase of \$20.0 million to accelerate work on the ACWA Chemical Demilitarization research and development program for the Pueblo Chemical Agent-Destruction Pilot Plant and the Blue Grass Chemical Agent-Destruction Pilot Plant.

The committee is troubled by the inconsistent and frequently changing programmatic guidance that has been provided by the Under Secretary of Defense for Acquisition, Technology and Logistics to the Secretary of the Army and the program manager for the ACWA program over the last two years, resulting in cost increases and schedule delays. The committee notes its satisfaction with the April 15, 2005, memo from the Under Secretary of Defense for Acquisition, Technology and Logistics in which he directed the release of fiscal year 2005 ACWA funds to the ACWA program manager. He also directed that the ACWA program manager determine expeditiously the most prudent design approach to maximize the opportunity to meet the Chemical Weapons Convention (CWC) extended 100% destruction deadline.

The committee is dissatisfied with the Department of Defense's oversight and management of the entire chemical weapons demilitarization program. A series of reports by the Government Accountability Office have concluded that the program is not meeting its goals and objectives because of its bifurcated management, lack of a comprehensive strategy, and an inadequate funding stream.

The committee is increasingly concerned that the budget request for the entire chemical demilitarization program does not provide sufficient funding to ensure that the United States will meet its treaty obligations under the CWC to completely destroy the U.S.

chemical weapons stockpile by April 2012 at the latest. In addition, any delay in execution of this program unnecessarily prolongs the safety and environmental risks to local communities, and the possibility that a chemical weapons storage site could be the object of a terrorist attack or attempt to acquire chemical weapons.

In light of these concerns, section 931 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375) directed the Under Secretary for Acquisition, Technology and Logistics and the Secretary of the Army to jointly prepare a strategic plan for future activities for destruction of the United States' stockpile of lethal chemical agents and munitions. The plan is to include realistic budgeting for stockpile destruction and related support programs; contingency planning for foreseeable or anticipated problems; and a management approach and associated actions that will address compliance with the obligations of the United States under the CWC and that take full advantage of opportunities to accelerate destruction of the stockpile. The committee notes that the plan, which was required to be submitted with the President's budget for fiscal year 2006, is overdue. The committee directs that the plan be provided expeditiously.

The committee believes that, due to the international legal obligations the United States has assumed pursuant to the CWC, senior administration officials at the Department of Defense, the National Security Council, the Department of State, and the Office of Management and Budget must give this matter increased attention now, while there is still time to make the adjustments necessary to put the program back on track. In particular, this means ensuring that the President's future years budget requests include sufficient funding to accomplish the mission of destroying the chemical weapons stockpile safely and on schedule to meet the treaty timelines. The Congress has made clear its willingness to consider requests for increased funding necessary to meet this goal. At the same time, the committee expects the Department of Defense to improve management and oversight of the program.

Finally, the committee notes that the support of local communities where the destruction activities are being, or will be, undertaken is essential to the Department of Defense's ability to achieve the 100% destruction of the U.S. chemical weapons stockpile by 2012. Therefore, the committee urges the Department to make every effort to consult with and take into account the views of local communities when making significant programmatic decisions that might impact those communities.

Army

Advanced combat helmet with modular integrated communications headset

The budget request included \$1.9 billion in Operation and Maintenance, Army (OMA), for land forces operations support, including \$750,000 for the advanced combat helmet with the modular integrated communications headset. The committee notes that the utility of the advanced combat helmet with modular integrated communications headset has been demonstrated under combat conditions and enhances the personal protection of the individual sol-

dier. The Army has completed approximately 50 percent of the approved acquisition object of the advanced combat helmet with modular integrated communications. The committee recommends an increase of \$20.0 million in OMA for the advanced combat helmet with modular integrated communications headset.

Army training

The budget request included \$758.8M in Operation and Maintenance, Army (OMA), for training support systems. The committee notes that the Army is making every effort to maximize training at homestation prior to deployment in support of contingency operations. Therefore, the committee recommends an increase of \$90.8 million in OMA for training support systems.

Army officials note that the conversion to a brigade-based force while preparing for deployment in support of contingency operations has presented a number of challenges to training units in ensuring deployment preparedness. The Army has acted to ensure training readiness by capitalizing on resources available at both the combat training centers (CTCs) and homestations. In fiscal year 2005, for example, the Army increased the number of rotations at the CTCs by 20 percent and increased the size of each rotation by 30 percent.

The committee notes, however, that the increases in rotations at the CTCs have had secondary effects. National Training Center instructors, for example, noted a decrease in the proficiency level of Third Infantry Division companies and platoons during their rotation, which the instructors attributed to limited training time at homestation. Two brigades of the 101st Air Assault Division, were required to advance their combat training schedules by 4 and 6 months, causing turbulence to planned homestation training in preparation for a CTC rotation. Officials at the Joint Readiness Training Center (JRTC) noted that the time staff was able to dedicate to planning and preparing final training events for Army units at JRTC had decreased by nearly 50 percent. The newly-formed brigade of the 10th Mountain Division garrisoned at Fort Polk is limited from fully using training ranges at Fort Polk because of the increase in the number of visiting units using the ranges for JRTC rotations.

The second approach to unit training implemented by the Army in 2005 was to complete unit training at homestation. In February 2005, the First Brigade Combat Team (1BCT) of the 82nd Airborne Division completed unit training at their homestation, Fort Bragg. As a result, the 1BCT was able to spend more time preparing for final training events and preparing equipment for deployment. The unit also was able to reapply approximately \$10 million, the cost to transport equipment to a combat training center, to high priority brigade requirements. Army leadership stated that the final training event at Fort Bragg equaled, and in many cases exceeded, the training experience at a CTC.

The committee understands the challenges to unit training that the Army is addressing, including the impact of accommodating both implementation of a brigade-based organization and preparation for deployment. The committee believes that the Army will be better prepared to address these challenges if the following actions

are taken. First, as addressed elsewhere in this report, the Army should develop and implement a training strategy for the brigade-based organization. Second, the Army should continue to fully maximize the limited amount of time and other resources available to units preparing for deployment, converting to brigade-based organization, or both, by completing training events at homestation to the maximum extent possible.

To increase the availability of resources at homestation, the committee recommends an increase of \$90.8 for training operations and training enablers, as follows: \$73.7 for homestation range operations; \$7.7 million for the virtual combat convoy trainer; \$3.9 million for the battle command training capability; \$3.0 million for cognitive air defense simulators; \$1.0 million for grenade range improvements; and, \$1.5 million for range fiber optic local area network (LAN) installation.

Corrosion prevention and control

The budget request included \$615.1 million in Operation and Maintenance, Army (OMA), for land forces systems readiness and \$416.5 million in Operation and Maintenance, Marine Corps (OMMC), for field logistics support. The committee supports the efforts of the Army and the Marine Corps to sustain their robust and comprehensive corrosion control programs. The committee also notes the work of the Marine Corps to assemble and deploy Corrosion Assessment Teams (CAT) and to implement the advanced vapor corrosion inhibitor delivery system (AAD-VCI). To date, the CATs, for example, have assessed, classified, and documented more than 23,000 pieces of ground combat equipment in five corrosion condition categories. The committee continues to support the efforts of both services to address corrosion in their vehicles and other equipment. Therefore, the committee recommends an increase of \$8.0 million in OMA and \$9.3 million in OMMC to support corrosion prevention, including \$4.8 million for Marine Corps CATs; \$2.0 million for Marine Corps corrosion prevention and control programs; and \$2.5 million for AAD-VCI.

The committee believes that each of the military services may benefit from a review of the corrosion mitigation programs implemented by other military services. The committee notes, for example, that the Army National Guard has mitigated corrosion and subsequently achieved significant cost savings through the Controlled Humidity Preservation Program (CHP). The CHP is a tiered approach to corrosion prevention and is used for several weapon systems, including combat vehicles and missile systems. Army National Guard officials report investment returns ranging from four-to-one to as high as eleven-to-one on the various weapon systems. The committee believes that corrosion prevention and control programs with demonstrated utility, such as the CHP, could offer similar benefits for the other services. The committee urges the Department of Defense's senior designated official for corrosion policy to ensure that the services coordinate their prevention and control programs to avoid duplication of effort.

Facility sustainment, restoration, and modernization for the Army

The budget request included \$1,825.5 million in Operations and Maintenance, Army (OMA), Operating Forces, for Facility Sustainment, Restoration, and Modernization (FSRM). This account is used by the Army to fund critical maintenance, repairs, and renovations of military facilities and infrastructure. The amount in the budget request equates to 92 percent of the total fiscal year 2006 FSRM requirement for the Army, 3 percent less than the budget goal established by the Department of Defense for this account.

On April 5, 2005, the Government Accountability Office released an issue paper entitled "Budget Justification Review: Operations and Maintenance Trends" that reviewed the Army's execution of the FSRM account. Their analysis concluded that an average of 29 percent of the funds authorized by Congress in fiscal year 2003 and 2004 for this account were not obligated for their intended purpose, but rather transferred to other operations and maintenance accounts.

The Army announced a goal on March 22, 2005, to obligate funds for FSRM at 90 percent of validated requirements. Therefore, the committee recommends a decrease of \$33.8 million in OMA to meet the Army's goal of funding 90 percent of the requirements for the FSRM account. The committee directs the Army to request funding for the FSRM account in future year budgets at an amount intended to be obligated for the purpose authorized by Congress, and to discontinue the practice of transferring FSRM funding to other operations and maintenance accounts.

Quadruple specialty containers

The budget request included \$248.2 million in Operation and Maintenance, Army (OMA), for strategic mobilization. The committee notes that the Army deploys quadruple specialty containers (QUADCONS) at key power projection platforms for early deploying units. This equipment has been particularly well used in support of ongoing contingency operations. The committee recommends an increase of \$6.0 million in OMA for QUADCONS.

Department of Defense foreign language training

The budget request included \$1.0 million for the Defense Language Institute in Operations and Maintenance, Army (OMA), specifically for satellite communications language training activities (SCOLA).

SCOLA is a unique satellite-based language training activity that provides television programming in a variety of languages from around the world. Language students and seasoned linguists have found this augmentation of their normal language training to be very helpful. SCOLA also has an Internet-based streaming video capability that greatly increases the availability of this training medium to military and civilian linguists, virtually anywhere they can obtain an Internet connection. In addition, SCOLA is developing a digital archive that will allow users anywhere to review and sort language training information on demand. The development of these capabilities will make SCOLA training assistance

much more widely available, but requires additional investment. The committee is concerned that even after three years of encouragement from the Congress, and in an operational environment where the value of language training is of great importance to the nation, the Department of Defense has not fully funded the innovative language training concepts that can help sustain and significantly improve the skills of military and civilian linguists in the Department.

The committee recommends an increase of \$6.0 million in OMA, for the Defense Language Institute, for funding of SCOLA related training activities.

Army civilian intern program

The budget request included \$154.2 million in Operation and Maintenance, Army (OMA), for civilian education and training, including funding for the Army civilian intern program. The committee notes that the requested level of funding for the intern program represents an increase of \$51.7 million over the fiscal year 2005 level. The committee believes that the Army has failed to provide justification for this increase. The committee recommends a decrease of \$51.7 million in OMA for the intern program.

Unattended ground sensors

The budget request included \$919.8 million in Operation and Maintenance, Army (OMA), for Security Programs, including \$1.7 million for unattended ground sensors (UGS). The committee notes that the Army is fielding a new UGS as a quick reaction capability in support of Operation Iraqi Freedom for area and force protection. The UGS will serve as an intrusion detection system, as well as provide target classification, target recognition, target identification, and target dynamics, enhancing the security of U.S. ground forces and their ability to rapidly engage threat forces. The committee recommends an increase of \$5.0 million in OMA, for UGS.

Information assurance vulnerability alert cell

The budget request included \$389.7 million in Operation and Maintenance, Army (OMA), for logistics support activities. The committee notes the importance of employing Army logistics systems, such as the Standard Army Management Information System, with security safeguards. The Information Assurance Vulnerability Alert (IAVA) Cell is designed to provide such safeguards, including information security analysis and response capabilities. The committee recommends an increase of \$3.0 million in OMA for the IAVA Cell.

Aviation and missile life cycle management pilot program

The budget request included \$606.6 million in Operation and Maintenance, Army (OMA), for administration activities. The committee notes the utility of electronic business (e-business) portals in weapon systems product life cycle management. The program manager (PM) for Aviation Systems has successfully used the Army Aviation Fleet Logistics Management e-business portal for such purposes. The committee understands that extending life cycle management technologies to the end-user may further enhance management efficiencies. The committee notes that a complete as-

assessment of the utility of extending life cycle management to the end-user has yet to be completed. Therefore, the committee recommends an increase of \$3.0 million in OMA to extend life cycle management capabilities from PM Aviation Systems to the end-user and directs that these funds be used to conduct a pilot program only.

In addition, the committee directs the Secretary of the Army to conduct a study on the effectiveness of the pilot program in supporting the goals of life cycle management for PM Aviation Systems. The committee directs the Secretary to report the results of the study to the congressional defense committees by March 31, 2006.

Army excess carryover

The Army's working capital fund budget request included \$3.1 billion in new orders and \$1.0 billion in calculated depot maintenance carryover—the dollar value of depot maintenance work that has been ordered, but not yet completed at the end of a fiscal year. In June 2004, the Department of Defense's Comptroller provided the services new written guidance concerning calculation of carryover. The previous guidance was that a service could "carryover" no more than the equivalent of 3 months of workload from one fiscal year to the next. The new methodology for calculating carryover, in which the Government Accountability Office (GAO) participated, includes an analytically-based carryover standard based on actual expenditures. While the new method is more analytically sound, the committee is concerned with the Army's execution of the methodology.

The Army continues to manage to an operation and maintenance expenditure rate 5 to 10 percentage points lower than the other services, allowing them to carryover significantly more workload at the end of a fiscal year. The committee recommends that, upon the completion of an ongoing study by the GAO on this discrepancy, the Department provide the services amended guidance concerning carryover calculations.

The committee also recommends that the Department use one rate for all of the services.

The committee is concerned that the Army's use of a different rate is not an effective cash management technique. By allocating funds to workload that will not be executable in fiscal year 2006, the lower rate restricts the Department from better using funds for more immediate, higher priority matters.

The committee recommends a decrease of \$94.7 million in Operation and Maintenance, Army, to reflect funds in the Army Working Capital Fund that cannot be expended in fiscal year 2006 due to the Army's excess depot maintenance carryover.

Audits of Department of Defense financial statements

The budget request included \$200.0 million in the service's operation and maintenance accounts for the audits of defense financial statements. The Government Accountability Office testified on April 13, 2005, before the Subcommittee on Readiness and Management Support of the Committee on Armed Services that spending on audits before the Department has financial management sys-

tems in place to support such audits is not the best use of limited resources. The committee expects that the auditors hired by the Department of Defense Inspector General in fiscal year 2005 for audits of defense financial statements will be used in fiscal year 2006 for other auditing and investigation purposes. The committee recommends a reduction of \$200.0 million to the service's operation and maintenance accounts, as follows:

- Operation and Maintenance, Army—\$70.0 million;
- Operation and Maintenance, Navy—\$65.0 million; and
- Operation and Maintenance, Air Force—\$65.0 million.

Civilian personnel pay in excess of requirements

The budget request included \$53.5 billion for civilian personnel pay in fiscal year 2006. Based on an analysis of the services' end strength data for civilian personnel as of April 29, 2005, the Government Accountability Office (GAO) projects that the Army and Navy/Marine Corps' civilian personnel costs are overstated for fiscal year 2006 by \$189.0 million. The committee recommends reducing the operation and maintenance accounts by \$189.0 million, as follows:

- Army—\$17.0 million; and
- Navy/Marine Corps—\$172.0 million.

Defense Information System Network

The committee understands that the Defense Information System Network (DISN)—the Department of Defense's backbone for providing data, video, and voice services—will establish a new pricing structure in fiscal year 2006 for billing the individual services for usage. While supportive of the proposed simplified structure, the committee is concerned about the conflicting and contradictory budget justification materials in DISN that accompanied the President's budget submission. As initially briefed to the committee, the simplified structure entails a decentralization of funds from the Defense Information Systems Agency (DISA) to the individual services. In turn, the services then pay a "subscription fee" for DISN usage. However, budget justification materials provided to the committee from the Office of the Secretary of Defense, DISA, and the individual services do not lay out this reallocation in any trackable, logical manner. The committee recommends reducing the Department's operation and maintenance accounts by \$95.0 million, as follows:

- Operation and Maintenance, Army—\$25.0 million;
- Operation and Maintenance, Navy—\$25.0 million;
- Operation and Maintenance, Air Force—\$25.0 million; and
- Operation and Maintenance, Defense Information System Agency—\$20.0 million.

Working capital funds

The budget request included \$3.1 billion in discretionary spending for defense working capital funds. These working capital funds serve a vital role in providing financial transaction flexibility for critical defense customer support activities. When working capital funds produce an annual net operating result involving a surplus—revenues exceeding expenses—consideration should be given to ad-

justing customer rates in future years. Working capital funds that do not appropriately return surplus funds to the supported departments, commands, and agencies through rate-change mechanisms artificially inflate the cost of support and deprive the supported units of limited resources. In many cases, the global war on terrorism has created increased work flow in and out of working capital funds annually over scheduled peacetime projections.

In previous years, the committee has urged the Department of Defense to anticipate the increased workload being experienced within the working capital funds and to budget accordingly. While some agencies and services have begun to take these additional revenue and expenses into account, the Army, Air Force, and Defense Information System Agency (DISA) still are not doing so. Consequently, end of year positive operating balances and excess cash balances continue to grow for these working capital funds.

The current projections of net operating result for fiscal year 2006 for the Army, Air Force, and DISA are based, in part, on artificially low revenue estimates. As higher revenues are realized, the working capital funds will continue to maintain large, positive operating balances and excess cash balances. To ensure proper management of the funds, the committee recommends reducing excess balances within these working capital fund accounts by \$252.9 million, as follows: Army, \$124.7 million; Air Force, \$85.5 million; and DISA, \$42.7 million.

Navy

NULKA decoy cartridge

The budget request included \$588.4 million in Operation and Maintenance, Navy (OMN), for ship operational support and training. The committee notes the Navy requirement to recertify Mark-234 NULKA electronic decoys every 3 years. The committee recommends an increase of \$2.7 million in OMN for NULKA maintenance and recertification.

Stainless steel sanitary spaces

The budget request included \$4.0 billion in Operation and Maintenance, Navy (OMN), for ship depot maintenance. The committee notes that the Stainless Steel Sanitary Space (S4) is being installed on ships during repair or overhaul periods. The S4 consists of corrosion prevention materials and coatings, which reduce maintenance requirements and increase quality of life for ships' company. The committee recommends an increase of \$4.5 million in OMN to sustain the S4 installation rate.

Manufacturing Technical Assistance and Production Program

The budget request included \$298.1 million in Operation and Maintenance, Navy (OMN), for combat communications, including funding for Space and Naval Warfare Systems Command (SPAWAR) activities. The committee notes that the Manufacturing Technical Assistance and Production Program (MTAPP) continues to be a key program for integration of small businesses into the

military supply chain. The committee recommends an increase of \$4.0 million in OMN for SPAWAR MTAPP.

Electric start system

The budget request included \$173.0 million in Operation and Maintenance, Navy (OMN), for equipment maintenance. The committee notes that performance models have demonstrated that improved reliability and lower maintenance costs could be achieved with electric start technology. Electric start system technology is now available for installation on marine gas turbine engines, including power plants on Ticonderoga-class cruisers and Arleigh Burke-class destroyers. The committee recommends an increase of \$8.0 million in OMN for electric start system upgrades.

Marine gas turbine photonic sensors

The budget request included \$173.0 million in Operation and Maintenance, Navy (OMN), for equipment maintenance. The committee understands that more accurate monitoring of gas turbine plant performance and operating parameters is an important element of the Navy's Conditioned Based Maintenance (CBM) program. The committee recommends an increase of \$3.0 million in OMN for marine gas turbine photonic sensors in support of the CBM program.

Mark-45 gun system overhauls

The budget request included \$473.6 million in Operation and Maintenance, Navy (OMN), for weapons maintenance, including funding for the overhaul of Mark-45 (Mk-45) gun systems. The committee notes that the Mk-45 continues to be the Navy's primary battery on cruisers and destroyers. The committee recommends an increase of \$16.0 million in OMN for Mk-45 gun system overhauls.

Facility sustainment, restoration, and modernization for the Navy

The budget request included \$1,345.0 million in Operations and Maintenance, Navy (OMN), Operating Forces, for Facility Sustainment, Restoration, and Modernization (FSRM). This account is used by the Navy to fund critical maintenance, repairs and renovations of military facilities and infrastructure. The amount in the budget request equates to 95 percent of the total fiscal year 2006 FSRM requirement for the Navy, which meets the budget goal established by the Department of Defense for this account.

On April 5, 2005, the Government Accountability Office released an issue paper entitled "Budget Justification Review: Operations and Maintenance Trends" that reviewed the Navy's execution of the FSRM account. Their analysis concluded that 23 percent of the funds authorized by Congress in fiscal year 2004 for this account were not obligated for their intended purpose, but transferred to other operations and maintenance accounts.

The committee recommends a decrease of \$26.2 million in OMN to reflect the anticipated obligation amount in fiscal year 2006. Furthermore, the committee directs the Department of the Navy to request funding for the FSRM account in future year budgets at an amount intended to be obligated for the purpose authorized by Con-

gress, and to discontinue the practice of transferring FSRM funding to other operations and maintenance accounts.

Marine Corps

Acclimate high performance undergarments

The budget request included no funding in Operation and Maintenance, Marine Corps (OMMC), for acclimate high performance undergarments. The committee notes that the Commandant of the Marine Corps continues to support the initiative to make improvements in form, fit, and function of Marine clothing and accessories. Acclimate high performance undergarments allow Marines to adapt to all environments using one type of undergarment system. The committee recommends an increase of \$2.5 million in OMMC for acclimate high performance undergarments.

Combat casualty care equipment upgrades

The budget request included no funding in Operation and Maintenance, Marine Corps (OMMC), for combat casualty care equipment upgrades. The committee notes that the Marine Corps assesses combat casualty care equipment upgrades as high military value and has an identified shortfall of 458 units against the approved acquisition object (AAO). The committee recommends an increase of \$5.2 million in OMMC for combat casualty care equipment upgrades to fulfill the AAO.

Family of mountain cold weather clothing and equipment

The budget request included \$7.5 million in Operation and Maintenance, Marine Corps (OMMC), for the family of mountain cold weather clothing and equipment. Additional funding for the family of mountain cold weather clothing and equipment has been identified on the Commandant of the Marine Corps unfunded priorities list, including the All Purpose Environmental Clothing System (APECS). The committee recommends an increase of \$8.0 million in OMMC for APECS.

Portable tent lighting

The budget request included no funding in Operation and Maintenance, Marine Corps (OMMC), for portable tent lighting. The committee notes that Marine Corps portable tent lighting is electro-magnetic interference hardened to prevent compromising peripheral electronics and computers. Additional funding for portable tent lighting has been identified on the Commandant of the Marine Corps unfunded priorities list. The committee recommends an increase of \$2.0 million in OMMC for portable tent lighting.

Ultra-light Camouflage Net System

The budget request included no funding in Operation and Maintenance, Marine Corps (OMMC), for the Ultra-light Camouflage Net System (ULCANS). The committee notes that ULCANS greatly enhances the ability of combat troops and support units to conceal military target signatures of weapons, vehicles, and semi-permanent positions in situations where natural cover or concealment may be absent or inadequate. Additional funding for ULCANS has

been identified on the Commandant of the Marine Corps unfunded priorities list. The committee recommends an increase of \$8.0 million in OMMC for ULCANS.

Supplemental communications and electrical utility support to U.S. Marine Corps Network Operations Center

The budget request included no funding in Operation and Maintenance, Marine Corps, to extend and improve base information technology and electric infrastructure to meet requirements of the network operations center currently under construction and other facilities at the U.S. Marine Corps Base at Quantico, Virginia. There is a requirement for \$2.1 million to complete construction of the Marine Corps network operations center that begun last year. Without this additional funding, the Marine Corps communications and warfighting capabilities will be degraded.

The committee recommends an increase in Operation and Maintenance, Marine Corps, of \$2.1 million to extend and improve base information technology and electrical infrastructure to meet requirements of the network operations center and other facilities.

Air Force

Bomber deployable phase maintenance kits

The budget request included no funding in Operation and Maintenance, Air Force (OMAF), for B-52 or B-1 bomber deployable phase maintenance kits. The committee notes that the global war on terrorism has increased the requirement for Air Force aircraft, including bombers, to operate from forward operating locations. Additional funding for B-52 and B-1 bomber deployable phase maintenance kits has been identified on the Chief of Staff of the Air Force unfunded priorities list in order to increase bomber availability in theater. The committee recommends an increase of \$86.0 million in OMAF for bomber deployable phase maintenance kits, as follows: \$34.0 million for B-1 aircraft and \$52.0 million for B-52 aircraft.

Robust Nuclear Earth Penetrator

The budget request included \$3.5 million in Operation and Maintenance, Air Force (OMAF), for the development of a preliminary design and risk assessment of a navigation, guidance, and control unit for the Robust Nuclear Earth Penetrator (RNEP), and for an assessment of the integration and requirements of such a unit for carriage on the B-2 bomber. The committee notes that the evaluation of RNEP feasibility by the Department of Energy is not scheduled to be completed prior to 2007. Therefore, the committee recommends a decrease of \$3.5 million in OMAF.

Joint protection enterprise network

The budget request included no funding in the Operations and Maintenance, Air Force (OMAF) account for the joint protection enterprise network (JPEN). The Department of Defense requires standardized and timely submission of Threat and Local Observation Notices (TALON) and Suspicious Activity Reports (SAR) across components and commands. The Commander, U.S. Northern Com-

mand, has identified funding shortfalls for the operations and maintenance of JPEN, which provides this capability. The committee recommends an increase of \$3.6 million in OMAF to address this funding shortfall and to support system upgrades, enhanced functionality, and expanded information sharing capabilities for JPEN.

Joint task force north

The budget request included \$4.5 million in the Operations and Maintenance, Air Force (OMAF) account for Joint Task Force North (JTF-N). In September 2004, Commander, U.S. Northern Command (NORTHCOM), assigned JTF-N a full homeland defense and civil support mission. This new mission transforms JTF-N into an operational, proactive, transnational threat-focused organization driven by actionable intelligence. The Commander, NORTHCOM, has identified funding shortfalls for the operation of the task force. The task force must maintain operational readiness and participation in efforts such as the recently concluded 3 month, multiagency Operation Winter Freeze border security project. The successful operation took place on the northeast border during a period of heightened security. The committee recommends an increase of \$6.0 million in OMAF to support basic operational requirements; equipment and personnel for the JTF-N; and to continue projects focused on proactive situational awareness, decision superiority, theater security cooperation, and other initiatives required under the new homeland defense and civil support mission.

Mobile consolidated command center

The budget request included \$14.9 million in the Operations and Maintenance, Air Force (OMAF) account for the mobile consolidated command center (MCCC). The MCCC is a rapidly deployable, vehicle-based command and control center designed to provide commanders with tactical warning, military force direction, and consequence management during periods of heightened security alerts or increased national readiness levels. The Commander, U.S. Northern Command, has identified funding shortfalls for the operations and maintenance of MCCC.

The committee recommends an increase of \$6.2 million in OMAF to address this shortfall and to fully sustain and support the operation of the MCCC. Uninterrupted operation of the MCCC would ensure the availability of continuous communication links to the military chain of command in a crisis and would allow for prolonged independent operation as necessary.

Mobility Air Force depot maintenance

The budget request included \$2.5 billion in Operation and Maintenance, Air Force (OMAF), for depot maintenance programs, including \$287.8 million for KC-135 depot maintenance and \$87.5 million for C-130 depot maintenance. The KC-135 and C-130 are venerable, combat-tested aircraft. Manned with talented, dedicated mobility Air Force crews, these aircraft continue to demonstrate their essential contributions to the global war on terrorism. Additional funding for KC-135 depot maintenance and for C-130 depot maintenance has been identified on the Chief of Staff of the Air

Force unfunded priorities list. The committee, therefore, recommends an increase of \$96.6 million in OMAF, including \$59.0 million for KC-135 depot maintenance and \$37.6 million for C-130 depot maintenance funding to address immediate safety of flight issues and to sustain the long-term readiness of mobility air forces.

The committee is concerned with the level of funding provided for KC-135 depot maintenance, given the results of previous Air Force studies, ongoing efforts to mitigate corrosion, and continuing challenges related to the future force structure of tanker aircraft. The Tanker Requirement Study for Fiscal Year 2005, supported by the KC-135 Economic Service Life study, concluded that the Air Force should apply additional resources for KC-135 depot maintenance in order to increase depot throughput and to maximize available operational aircraft. The committee finds, however, that the budget request included funding for only 47 percent of the requirement for KC-135 air frame maintenance and only 58 percent of the total depot maintenance requirement for KC-135 aircraft. The committee, therefore, recommends additional funding for KC-135 depot maintenance to maintain a viable depot maintenance program and address continuing challenges.

The committee notes that recent changes to the C-130J acquisition program and the discovery of advanced fatigue in the center wing box of the current inventory of C-130 aircraft present challenges to the readiness of the C-130 fleet. Program changes and advanced wing fatigue were not anticipated when the C-130 depot maintenance program for fiscal year 2006 was prepared. The committee notes that as a result of center wing box fatigue, the Air Force has grounded 30 aircraft and has imposed restrictions on an additional 60 aircraft. The committee, therefore, recommends an increase in depot maintenance funding to address immediate C-130 center wing box safety of flight issues and to ensure the availability of mission capable aircraft to support intra-theater, tactical air lift operational requirements.

The committee notes that this additional funding is one part of an overall initiative by the committee to provide additional funding for KC-135 and C-130 readiness.

Homeland Security/Homeland Defense Education Consortium

The budget request included no funding in the Operations and Maintenance, Air Force (OMAF) account to continue the U.S. Northern Command (NORTHCOM) Homeland Security/Homeland Defense Education Consortium (HSDEC). The committee recommends an increase of \$1.0 million in OMAF to enable NORTHCOM to continue and expand HSDEC. As homeland security and homeland defense roles and missions are further defined, it is important that educational curriculums designed to train personnel in these areas adhere to standards, and that the Department of Defense, through NORTHCOM, participates in establishing the criteria for such standards. An expanded program would increase the role of NORTHCOM in setting education and research priorities and would further training, information sharing, and targeted projects, particularly in cyber and biodefense.

Defense-Wide

Counseling and assistance to military families

The budget request included \$42.0 million in Operation and Maintenance, Defense-wide (OMDW), for non-medical counseling and \$179.0 million for family assistance centers across all military departments. Recent studies, including the National Military Family Association's "Serving the Home Front" analysis and the Army Family Action Plan, show significantly increased demand for assistance to families due to the changing nature of military service since September 11, 2001.

The committee recommends an increase of \$30.0 million in OMDW for increased assistance to military families, including non-medical, preventive mental health counseling, including assistance to families of the Guard and Reserve. The committee expects the increased funding to support non-medical counseling services available through the Department of Defense's Military One-Source program, which provides up to six face-to-face counseling visits for individual and family needs, both in the continental United States and overseas. The committee further directs that additional funds be applied to reducing the shortfall of funding for family assistance centers serving the Army National Guard, Air Force National Guard Wings, Air Force Reserve, and Army Reserve.

Increased support for child care for military families

The budget request included a total of \$440.0 million for child care services for all military services, including \$174.0 for the Army; \$95.0 for Navy; \$151.0 for Air Force; and \$20.0 for the Marine Corps. The committee believes that additional funds are needed to meet the documented requirement for more than 38,000 additional child care spaces for military families. The committee is concerned that the Department of Defense has an ongoing deficiency in the availability of child care services, which has increased significantly in the past two years and which adds a substantial burden to the families of deployed military members.

The committee recommends an increase of \$40.0 million in Operations and Maintenance, Defense-wide (OMDW) for child care services for military families, including the families of mobilized Guard and Reserve members.

The committee intends that the increased funding will be used for the following purposes:

- (1) construction of temporary facilities at military installations with high deployment rates that are experiencing an increase in births, based on authority provided elsewhere in this report. This new authority would increase the threshold for use of minor military construction authority for unspecified minor construction projects to construct child development centers; and
- (2) support for public-private partnerships to provide incentives for providers on and off military installations to offer support to military families.

The committee acknowledges that the demand for child care services exceeds availability both in the continental United States

and overseas, and is a top quality of life concern among military personnel.

Funding for Office of Economic Adjustment

The budget request included \$30.0 million in Operations and Maintenance, Defense-wide (OMDW), Administration and Service-wide Activities, for the Office of Economic Adjustment (OEA). The committee recommends additional funding of \$60 million in OMDW to allow the OEA to provide planning assistance to local communities affected by the closure or realignment of military installations resulting from the 2005 Defense Base Closure and Realignment (BRAC) round.

The OEA provides comprehensive planning and organizational assistance to communities, regions, and States adversely impacted by BRAC. Civilian reuse of a former military installation is often the single most important opportunity for an affected community to overcome the specific impacts of a closure or realignment, while building upon a community's strengths and opportunities. OEA anticipates start-up obligations that will average \$1.0 million per community grant in fiscal year 2006 for local staff to coordinate the community's response and to develop realistic reuse plans and community strategies. OEA grants will also be used to establish physical and environmental baseline conditions, to study market-feasible reuses, and to plan for potential zoning actions and public improvements.

Capital security cost sharing

The budget request included \$61.3 million in Operation and Maintenance, Defense-wide, for capital security cost sharing. The committee recommends a decrease of \$61.3 million for capital security cost sharing.

Elsewhere in this report, the committee recommends a provision that would permit funds appropriated to the Department of Defense to be transferred to the Department of State as payment for a fee charged by the Department of State for maintenance, upgrade, or construction of U.S. diplomatic facilities, only to the extent that the amount charged in any given year exceeds the total amount of unreimbursed costs incurred by the Department of Defense during that year in providing goods and services to the Department of State. The committee anticipates that in fiscal year 2006 the Department of Defense will provide unreimbursed goods and services to the Department of State valued in excess of \$61.3 million; therefore, the Department of Defense will not need the money included in the budget request for the capital security cost sharing program.

Information assurance scholarship program

The budget request included \$5.5 million in Operations and Maintenance, Defense-wide (OMDW), for the information assurance scholarship program. The committee recommends an increase of \$3.0 million in OMDW for this program. The Department of Defense requires experts in the areas of information security, assurance, and architecture. Increased funding for these scholarships

will allow the Department to educate and train additional students in fiscal year 2006.

The committee's commitment to ensuring an adequate and skilled workforce to support the Department's complex information assurance and security challenges led to the creation of this scholarship program in the Floyd D. Spence National Defense Authorization Act for Fiscal Year 2001 (Public Law 106-398). The committee continues to strongly support the program and commends the Department for successful recruitment of quality educational institutions and perspective students to participate in this important endeavor.

Increased funding for conservation buffer zones

The budget request included \$20.0 million in Operations and Maintenance, Defense-wide, for implementation of conservation buffer zones around military facilities under the Department of Defense's Readiness and Environmental Protection Initiative. The committee recommends an increase of \$20.0 million to accelerate the Readiness and Environmental Protection Initiative.

The committee believes that limiting the development or use of property that would be incompatible with the mission of an installation, and preserving habitat that is compatible with environmental requirements and which may also serve to eliminate or relieve current or anticipated environmental restrictions on the use of military installations, should be a high priority for the Department. The Department should pursue opportunities to avoid encroachment by urban growth and development through partnership agreements with eligible entities. The committee directs that in allocating the funding provided for the Department's Readiness and Environmental Protection Initiative, the Department should give priority to projects that have been characterized by the Army as benefitting high priority training sites and identified as having the greatest potential to reduce or prevent encroachment through the implementation of a compatible use buffer zone, such as projects that are part of the Army's Compatible Use Buffer Program at the following locations: Fort Campbell, KY; Fort Carson, CO; Fort A. P. Hill, VA; Fort Hood, TX; Fort Sill, OK and Camp Ripley, MN.

Citizen-Soldier Support Program

The budget request included no funding in Operation and Maintenance, Defense-wide (OMDW), for the Citizen-Soldier Support Program. The committee is aware that the Citizen-Soldier Support Program is improving and augmenting family readiness programs for families of the Reserve and Guard. This program is providing expert assistance to reserve families in remote areas in which military installations and the services these installations offer do not exist. The committee believes that there is an ongoing need for such assistance to military families.

The committee recommends an increase of \$2.0 million in OMDW to expand services provided by the Citizen-Soldier Support Program.

Parents as Teachers

The budget request included no funding in Operation and Maintenance, Defense-wide (OMDW), for the Parents as Teachers program. The committee believes that additional funding is needed to expand a program that provides assistance to military families through providing instructional assistance to parents of pre-school children.

The committee authorizes the increase in order to initiate a demonstration program at up to five military installations, to be identified in conjunction with the Department of Defense, at which there is a large concentration of military families experiencing high deployment rates and large numbers of children from birth to five years of age. The committee acknowledges that the Parents as Teachers program has been successfully supporting military families under nondefense sponsorship at Fort Leonard Wood, Missouri; Fort Leavenworth, Kansas; Fort Riley, Kansas; and Fort Hood, Texas; and expects that funding would support continued operation of these highly successful programs as well.

The committee believes that the Parents as Teachers program can provide a valuable service to military families, based on voluntary participation, through providing instructional assistance to parents of pre-school children. The committee recommends an increase of \$1.0 million in OMDW for the Parents as Teachers program.

Military to civilian conversions

The budget request included \$1.4 billion in Operation and Maintenance, Army (OMA); Operation and Maintenance, Navy (OMN); Operation and Maintenance, Marine Corps (OMMC); Operation and Maintenance, Air Force (OMAF); and Operation and Maintenance, Defense-wide (OMDW) for conversion of 6,434 military positions to 11,573 civilian positions during fiscal year 2006. The committee is concerned that the Department of Defense has not provided adequate information on the funding requirements and execution data for military to civilian conversions.

According to an April 29, 2005, analysis by the Government Accountability Office (GAO), the Office of the Secretary of Defense and service budget officials acknowledge that they are unable to provide a clear methodology to calculate the Department's budget cost estimates for replacing military positions with civilians in fiscal year 2006. According to the GAO analysis, Department officials also acknowledged that the services have not determined the federal civilian employee and contractor mix for these conversions. The GAO analysis stated: "Without determining this mix, DoD can not be certain whether it accurately estimated its need for staffing resources and the funds to pay for such resources in its fiscal year 2006 budget."

The committee concurs with this assessment regarding the lack of clarity on the budget requirements for achieving conversion of military billets to civilians or contractors. The committee believes that military-to-civilian conversions should be reviewed and validated by the Secretary of Defense to ensure that such requirements are formulated in a consistent manner; that there is an availability of qualified civilian employees; and that the mix of Department ci-

vilians and contractors is more clearly understood. Therefore, the committee recommends a decrease of \$285.0 million for military to civilian conversions, as follows:

- Operation and Maintenance, Army (OMA)—\$90.0 million;
- Operation and Maintenance, Navy (OMN)—\$90.0 million;
- Operation and Maintenance, Air Force (OMAF)—\$90.0 million; and
- Operation and Maintenance, Defense-wide (OMDW)—\$15.0 million.

Army Reserve

Army Reserve components cold weather clothing

The budget request included no funding in Operation and Maintenance, Army Reserve (OMAR), or Operation and Maintenance, Army National Guard (OMARNG), for the Extended Cold Weather Clothing System (ECWCS). According to Reserve component officials, the ECWCS program is critical to unit mission and training requirements in all regions and in all deployments. The committee recommends an increase of \$4.0 million for the ECWCS, as follows: \$2.0 million in OMAR and \$2.0 million in OMARNG.

Air Force Reserve

Air Force Reserve mobility Air Force depot maintenance

The budget request included \$377.8 million in Operation and Maintenance, Air Force Reserve (OMAFR), for mobility Air Force (MAF) depot maintenance programs, including \$74.0 million for KC-135 depot maintenance and \$96.6 million for C-130 depot maintenance. The committee recommends an increase of \$58.0 million in OMAFR for Air Force Reserve MAF depot maintenance, as follows: \$53.7 million for KC-135 depot maintenance, \$4.3 million for C-130 depot maintenance, including inspection and repair of the center wing box.

Elsewhere in this report, the committee notes that this additional funding is one part of an overall initiative to address immediate safety of flight issues and to sustain the long-term readiness of mobility air forces.

Army National Guard

Communicator Automated Emergency Notification System

The budget request included no funding for the Communicator Automated Emergency Notification System (CAENS). The committee notes that the CAEN, a component of the Emergency Mass Notification System, provides timely and effective notification of emergencies to soldiers supporting contingency operations within the homeland and at deployed locations worldwide. The committee recommends an increase of \$2.5 million in OMARNG for CAENS.

Virtual battlefield system one

The budget request included no funding in Operation and Maintenance, Army National Guard (OMARNG), for the virtual battlefield system one (VBS1). The committee notes that VSB1 is specifically designed to meet the training objectives of small infantry unit

operations. The committee understands that the Army National Guard initiated fielding of the VSB1 in response to an urgent training requirement in support of deploying units. VSB1 is currently part of the predeployment training package at many Army National Guard mobilization sites. The committee recommends an increase of \$8.0 million in OMARNG for VBS1.

Chemical, Biological, Radiological, Nuclear and High Yield Explosive Enhanced Response Force Package Teams

The budget request included no funding for National Guard Chemical, Biological, Radiological, Nuclear and High Yield Explosive (CBRNE) Enhanced Response Force Package (NG CERFP) teams. The committee recommends an increase of \$19.8 million for this program. Of that amount, the committee recommends an increase of \$9.5 million to establish five additional NG CERFP teams, and an increase of \$10.3 million to provide sustainment funding for the 12 existing NG CERFP teams.

The committee directs that the \$9.5 million for the five additional NG CERFP teams be allocated as follows: Operations and Maintenance, Army National Guard, \$4.0 million; Operations and Maintenance, Air National Guard, \$2.3 million; National Guard Personnel, Army, \$1.6 million; and Military Personnel, Air National Guard, \$1.6 million.

The committee directs that the \$10.3 million for sustainment for the 12 existing NG CERFPs be allocated as follows: Operations and Maintenance, Army National Guard, \$1.8 million; Operations and Maintenance, Air National Guard, \$1.1 million; National Guard Personnel, Army, \$3.7 million; and Military Personnel, Air National Guard, \$3.7 million.

The NG CERFP pilot program was initiated in fiscal year 2004 and has proven to be a valuable asset for federal and state authorities. Twelve NG CERFP teams were funded through fiscal year 2005 as a proof of concept demonstration. These NG CERFP teams are capable of performing mass decontamination and triage/emergency medical treatment, and locating and extracting victims from an incident "hot zone." The NG CERFP teams provide follow-on forces in support of the National Guard's Weapons of Mass Destruction Civil Support Teams (WMD-CSTs), whose mission is to support civil authorities at a domestic CBRNE incident site by identifying CBRNE agents/substances, assessing current and projected consequences, and advising on response measures. The NG CERFP teams deploy subsequently, within 4–24 hours after a disaster, to provide additional capabilities in support of civil or military authorities in conducting consequence management operations.

The original 12 CERFP teams are located in each of the 10 Federal Emergency Management Agency (FEMA) regions, with two additional teams placed to cover larger geographic areas. Continued funding for the 12 original NG CERFP teams will ensure that they are available to assist local authorities in major disasters. These existing teams would also benefit from the purchase of additional equipment including medical supplies, extraction equipment, and special outfits with ancillary assemblies for hot zones. The committee believes that the five additional teams will provide en-

hanced capabilities for response to a chemical, biological, radiological, or nuclear attack or event.

Air National Guard

Air National Guard mobility Air Force depot maintenance

The budget request included \$612.8 million in Operation and Maintenance, Air National Guard (OMANG), for mobility Air Force (MAF) depot maintenance programs, including \$221.7 million for KC-135 depot maintenance and \$93.7 million for C-130 depot maintenance. The committee recommends an increase of \$45.5 million in OMANG for Air Force National Guard MAF depot maintenance, as follows: \$35.8 million for KC-135 depot maintenance and \$9.7 million for C-130 depot maintenance.

Elsewhere in this report, the committee notes that this additional funding is one part of an overall initiative to address immediate safety of flight issues and to sustain the long-term readiness of mobility air forces.

Transfer Accounts

Funding for Formerly Used Defense Sites

The budget request included \$221.9 million for cleanup of Formerly Used Defense Sites (FUDS). The committee notes that the budgeted amount is below the level authorized and appropriated for this program in fiscal year 2005, even though the scope and challenges of FUDS cleanup remain substantial. The committee recommends an increase of \$40.0 million for FUDS cleanup. The committee expects the Department of Defense to demonstrate its commitment to FUDS cleanup by increasing the amount of funding budgeted for this effort in the outyears.

ITEM OF SPECIAL INTEREST

Defense Information System Network Access Transport Services

The committee notes that the Defense Information Systems Agency (DISA) is in the process of acquiring additional network access to connect remote Department of Defense locations to terrestrial networks that are part of a component of the Global Information Grid (GIG), known as the GIG Bandwidth Expansion (GIG-BE). This will provide the Department with a high speed fiber optic network that will greatly enhance network centric operations.

The committee is concerned that DISA is moving forward with an acquisition plan to acquire this connectivity through a Defense Information System Network Access Transport Services (DATS) contract without a complete analysis of the costs and capabilities associated with all possible alternative strategies. In a briefing to the committee by DISA personnel, they reported that the underlying assumptions behind the analysis of alternatives (AoA)—accomplished internally by DISA, of whether to purchase or lease fiber optic connectivity, did not include cost as a factor. The committee also understands that DISA has not solicited sufficient input from industry. The committee understands that the Office of the Secretary of Defense for Program Analysis and Evaluation, an

independent analysis group within the Office of the Secretary of Defense, has voiced concerns about the DISA-planned approach for over a year. The committee directs the Congressional Budget Office to undertake a review of the AoA and underlying assumptions being prepared by DISA and report its findings to the committee by March 1, 2006.

Test to improve the quality of agricultural produce available in commissary stores

The committee is aware that the Defense Commissary Agency has initiated a test program to improve the quality of agricultural produce, particularly fruits and vegetables available to patrons of military commissary stores. The test employs web-based ordering techniques and is designed to reduce average times for the receipt of produce and to improve administrative processing. The test also affords greater opportunities for small businesses to become providers to commissary stores.

The committee believes that the adoption of modern business practices such as these will improve the quality of produce available at commissary stores, and encourages the Department of Defense to move forward to implement such best practices throughout the commissary system. The committee directs the Secretary of Defense to report to the congressional defense committees by April 1, 2006, on its progress in implementation of improved business practices designed to result in better quality produce at Department Commissary stores.

TITLE IV—MILITARY PERSONNEL AUTHORIZATIONS

Subtitle A—Active Forces

End strengths for active forces (sec. 401)

The committee recommends a provision that would authorize active duty end strengths for fiscal year 2006, as shown below:

	Fiscal year—		
	2005 authorization	2006 request	2006 recommendation
Army	502,400	482,400	522,400
Navy	365,900	352,700	352,700
Marine Corps	178,000	175,000	178,000
Air Force	359,700	357,400	357,400

The Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108–375) authorized active duty end strength for the Army at 502,400 and 178,000 for the Marine Corps. Additional authority was also provided in section 403 of that Act to increase active duty end strength for the Army by up to 30,000 and increase Marine Corps active duty end strength by up to 9,000 above the fiscal year 2004 authorized levels of 482,400 and 175,000, respectively, during fiscal years 2005 through 2009.

The committee notes that the Army and the Marine Corps continue to provide substantial forces in support of operations in Iraq and Afghanistan, and that the Reserve components comprise approximately 40 percent of the troops in theater. The Army is simultaneously engaged in major organizational changes intended to increase combat power and flexibility by creating more modular units of deployment at the combat brigade level, and is also working to rebalance critical skills and units between the active and Reserve component forces.

Because of these continuing demands, the Army currently estimates that its active duty end strength for fiscal year 2006 will be 522,400. The Marine Corps believes that its active duty end strength for fiscal year 2005 will be about 178,000. The Commandant of the Marine Corps has testified before the Committee on Armed Services that an increase in end strength is not required for fiscal year 2006.

The committee believes that achieving an active duty end strength above 522,400 in fiscal year 2006 would be difficult for the Army given the challenges the Army faces in recruiting and retention. The committee also believes that broad use of stop-loss authority to meet higher end strength requirements would have negative impacts on recruiting, retention, and the public's perception of military service. The committee believes the Army should make every effort to reduce the number of personnel retained under stop-

loss authority, consistent with maximum combat unit cohesion and readiness.

For the reasons set forth above, the committee recommends an active duty end strength for the Army at 522,400 and 178,000 for the Marine Corps for fiscal year 2006. This reflects an increase of 20,000 from the authorized level for the Army for fiscal year 2005 and an increase of 40,000 from the requested level for fiscal year 2006. The recommended level for the Marine Corps is equal to the authorized level in fiscal year 2005 and is an increase of 3,000 from the requested level for fiscal year 2006. The committee has recommended funding to support these higher end strength levels in title XIV of this Act. The recommended active duty end strength for the Navy is decreased by 13,200 and the recommended active duty end strength for the Air Force is decreased by 2,300, as requested.

Revision of permanent active duty end strength minimum levels (sec. 402)

The committee recommends a provision that would establish minimum active duty end strengths for the Army, Navy, Marine Corps, and Air Force as of September 30, 2006, as shown below. These minimum end strengths reflect the committee recommendations in section 401 of this report. The minimum end strength requirements reflect an increase of 20,000 for the Army and a decrease of 13,200 for the Navy and 2,300 for the Air Force. The minimum end strength requirement for the Marine Corps remains equal to the level established for fiscal year 2005.

	Fiscal year—	
	2005 authorization	2006 recommendation
Army	502,400	522,400
Navy	365,900	352,700
Marine Corps	178,000	178,000
Air Force	359,700	357,400

Subtitle B—Reserve Forces

End strengths for Selected Reserve (sec. 411)

The committee recommends a provision that would authorize Selected Reserve end strengths for fiscal year 2006, as shown below:

	Fiscal year—		
	2005 authorization	2006 request	2006 recommendation
The Army National Guard of the United States	350,000	350,000	350,000
The Army Reserve	205,000	205,000	205,000
The Naval Reserve	83,400	73,100	73,100
The Marine Corps Reserve	39,600	39,600	39,600
The Air National Guard of the United States	106,800	106,800	106,800
The Air Force Reserve	76,100	74,000	74,000
The Coast Guard Reserve	10,000	10,000	10,000

End strengths for Reserves on active duty in support of the Reserves (sec. 412)

The committee recommends a provision that would authorize full-time support end strengths for fiscal year 2006, as shown below:

	Fiscal year—		
	2005 request	2006 recommendation	2006 authorization
The Army National Guard of the United States	26,602	27,345	27,396
The Army Reserve	14,970	15,270	15,270
The Naval Reserve	14,152	13,392	13,392
The Marine Corps Reserve	2,261	2,261	2,261
The Air National Guard of the United States	12,253	13,089	13,123
The Air Force Reserve	1,900	2,290	2,290

The committee recommends increases of 794 in the Army National Guard, 300 in the Army Reserve, 870 in the Air National Guard, and 390 in the Air Force Reserve. The committee supports increases in full-time support manning needed to increase readiness, particularly in view of the major role played by the Reserve and National Guard in ongoing operations in the global war on terrorism.

In addition to the budget request, the recommended end strengths include: 51 active duty members of the Army National Guard and 34 active duty members of the Air National Guard for sustainment of the 12 existing and creation of five additional National Guard Chemical, Biological, Radiological, Nuclear and High Yield Explosive (CBRNE) Enhanced Response Force Package teams. The committee also recommends a decrease of 760 in the Naval Reserve consistent with reductions in both active Navy and Naval Reserve end strength.

The committee recommends an end strength for the Marine Corps Reserve equal to the fiscal year 2005 level, consistent with the budget request.

End strengths for military technicians (dual status) (sec. 413)

The committee recommends a provision that would authorize end strengths for military technicians (dual status) for fiscal year 2006, as shown below:

	Fiscal year—		
	2005 authorization	2006 request	2006 recommendation
The Army National Guard of the United States	25,076	25,563	25,563
The Army Reserve	7,299	7,649	7,649
The Air National Guard of the United States	22,956	22,971	22,971
The Air Force Reserve	9,954	9,852	9,852

Fiscal year 2006 limitations on non-dual status technicians (sec. 414)

The committee recommends a provision that would establish numerical limits on the number of non-dual status technicians who

may be employed in the Department of Defense as of September 30, 2006, as shown below:

	Fiscal year—		
	2005 authorization	2006 request	2006 recommendation
The Army National Guard of the United States	1,600	1,600	1,600
The Army Reserve	795	695	695
The Air National Guard of the United States	350	350	350
The Air Force Reserve	90	90	90

Subtitle C—Authorizations of Appropriations

Authorization of appropriations for military personnel (sec. 421)

The committee recommends a provision that would authorize a total of \$109.2 billion for military personnel for fiscal year 2006, an increase of \$236.9 million above the budget request. This includes: (1) \$220.0 million for increases in Servicemembers' Group Life Insurance and death gratuity levels; (2) \$10.6 million for increases in Army and Air National Guard full-time support personnel to sustain the existing 12 and create five additional National Guard Chemical, Biological, Radiological, Nuclear and High Yield Explosive Enhanced Response Force Package teams; (3) \$6.0 million for continued payment throughout a period of hospitalization of special pay for duty subject to hostile fire or imminent danger; and (4) \$0.3 million for additional personnel costs related to the exclusion of general and flag officers on terminal leave from grade limits.

Armed Forces Retirement Home (sec. 422)

The committee recommends a provision that would authorize \$58.3 million to be appropriated for fiscal year 2006 from the Armed Forces Retirement Home Trust Fund for the operation and maintenance of the Armed Forces Retirement Home.

The committee is concerned that there are a number of complaints from residents of the Armed Forces Retirement Home that generally revolve around changes made in medical care, and that greater focus should be placed on these concerns.

The committee directs that the annual Performance and Accountability Report of the Armed Forces Retirement Home will include, in this and in all subsequent fiscal years, a report on the quality and access to health care for all residents of the home, and any changes in the level and type of care provided in each location. The report will describe the level and scope of services provided to all residents and will also include the results of independent accreditation surveys conducted by the Joint Commission on the Accreditation of Healthcare Organizations.

Additionally, to further communication between residents and management and to ensure that the voices of residents are heard, the committee directs the Secretary of Defense to conduct an annual survey of resident satisfaction. The survey will be developed with the involvement of the resident advisory committees and major functional committees, and will include questions relating to satisfaction with health care, facilities, and support services. All residents shall be invited to participate in the annual survey. The

survey format shall be consistent over time in order to reveal trends and indicators in satisfaction. The result and outcome of each annual resident survey will be reported in the Armed Forces Retirement Home's Performance and Accountability Report beginning in fiscal year 2007 and every year thereafter.

The committee expects that other resident suggestions will also be considered by the management of the home, including frequent meetings with residents and resident advisory councils, new resident questionnaires, as well as surveys of residents who chose to leave the Armed Forces Retirement Home for any reason.

TITLE V—MILITARY PERSONNEL POLICY

Subtitle A—Officer Personnel Policy

Exclusion of general and flag officers on leave pending separation or retirement from computation of active duty officers for general and flag officer distribution and strength limitations (sec. 501)

The committee recommends a provision that would amend sections 525 and 526 of title 10, United States Code, to exclude from consideration in determining the distribution limitations and the total number of general or flag officers of an armed force on active duty, officers in the grade of brigadier general or rear admiral (lower half) or above who are on leave pending separation, retirement, or release from active duty. This provision would only be applicable during the 60-day period beginning on the date of the commencement of leave of such officer. The committee believes that officers in general and flag officer grades who have commenced terminal leave should not be counted against existing limits on total numbers of officers. The committee expects that this provision would effectively reduce the incidence and duration of frocking of general and flag officers, and provide assistance to the services in filling general and flag officer billets.

Expansion of joint duty assignments for Reserve component general and flag officers (sec. 502)

The committee recommends a provision that would amend section 526(b)(2)(A) of title 10, United States Code, to increase from 10 to 11 the number of Reserve general or flag officer positions that may be assigned on the staffs of the commanders of the unified and specified combatant commanders. The provision would also authorize the Chairman of the Joint Chiefs of Staff to assign Reserve general or flag officers under section 526(b)(2)(A) to the Joint Staff.

The committee believes that the Chairman of the Joint Chiefs of Staff has effectively assigned Reserve component general and flag officers under this authority, and that an additional position on the Joint Staff is needed to assist in performing missions related to homeland defense, anti-terrorism, force protection, and military assistance to civil authorities.

Deadline for receipt by promotion selection boards of correspondence from eligible officers (sec. 503)

The committee recommends a provision that would amend sections 614 and 14106 of title 10, United States Code, to specify that officers eligible for consideration by a promotion selection board may send a written communication to the board, to arrive not later than the date before the board convenes.

Existing law provides that officers eligible for consideration may send written communications, to arrive not later than the date the promotion selection board convenes. This creates the potential that selection boards will have reviewed, briefed, and acted upon the record of an officer on the first day of board proceedings before written communications have been received. The committee believes this change will ensure greater efficiency in promotion selection board procedures, and that an effective date of March 1, 2006, will provide sufficient time for the services to issue appropriate notice to officers eligible for promotion.

Furnishing to promotion selection boards of adverse information on officers eligible for promotion to certain senior grades (sec. 504)

The committee recommends a provision that would amend section 615 of title 10, United States Code, to require that substantiated adverse information be provided to promotion selection boards considering Active and Reserve component officers for promotion to the grade of lieutenant colonel, or commander in the case of the Navy, or above. Under current law, the decision to provide promotion selection boards with substantiated adverse findings and conclusions from officially documented investigations or inquiries is subject to the discretion of the service secretaries, and unless previously made part of the official record such information is not routinely presented. The committee believes that promotion selection boards responsible for selecting the “best qualified” future senior leaders of the military services should evaluate such information and should be provided with adverse documentation as part of their deliberative process.

Grades of the Judge Advocates General (sec. 505)

The committee recommends a provision that would raise the statutory grades of the Judge Advocates General of the Army, Navy, and Air Force to lieutenant general or vice admiral, as appropriate. These three officers would be in addition to the numbers that would otherwise be permitted for their Armed Forces for officers serving on active duty in grades above major general or rear admiral, as the case may be.

The greatly increased operations tempo of the Armed Forces has resulted in an increase in the need for legal advice from uniformed judge advocates in such areas as operational law, international law, the law governing occupied territory, the Geneva Conventions, and related matters. In addition, the system of military justice, administered by the Judge Advocates General, has taken on increased importance. This provision recognizes these developments and the vital importance of the duties of these officers in today’s Armed Forces.

Temporary extension of authority to reduce minimum length of commissioned service for voluntary retirement as an officer (sec. 506)

The committee recommends a provision that would amend sections 3911, 6323, and 8911 of title 10, United States Code, to authorize reduction in the amount of time from 10 to 8 years that a

regular or Reserve officer who has prior enlisted service must serve as a commissioned officer in order to retire as a commissioned officer. The committee believes that lowering the amount of active service to 8 years would encourage more highly qualified petty officers and non-commissioned officers to consider applying for a commission. The committee also views this change as assisting in force shaping by enabling a limited number of officers, primarily in overmanned officer communities, to voluntarily choose retirement in the highest grade achieved. This reduction from 10 to 8 years was in effect from 1990 through 2001 and, under this provision, would remain in effect from the date of enactment of this Act through December 31, 2008.

Modification of strength in grade limitations applicable to Reserve flag officers in active status (sec. 507)

The committee recommends a provision that would amend section 12004 of title 10, United States Code, to reduce by four the number of required Naval Reserve flag officers in medical designators and by one the number of flag officers in the Supply Corps and to increase by five the number of Naval Reserve line officers.

The committee recognizes that additional Reserve flag officers in line and restricted line specialties are needed to meet operational requirements. The committee continues to view the allocation of line and staff corps Naval Reserve flag officers in section 12004 as a valuable means of ensuring sound officer community management and effective integration of the Active and Reserve components of the Navy.

Uniform authority for deferment of separation of Reserve general and flag officers for age (sec. 508)

The committee recommends a provision that would amend section 14512 of title 10, United States Code, to make uniform among each of the services the conditions under which the authority to defer retirement until age 64 of up to 10 reserve flag or general officers per service may be exercised. Under existing law, the Army and Air Force are limited to exercising this authority in the case of officers occupying certain billets. The committee believes removing this condition for the Army and Air Force will afford necessary flexibility in retaining key Army and Air Force senior Reserve officers possessing essential experience and skills.

Subtitle B—Enlisted Personnel Policy

Uniform citizenship or residency requirements for enlistment in the Armed Forces (sec. 521)

The committee recommends a provision that would amend section 504 of title 10, United States Code, to codify and uniformly apply existing practices of the military services regarding eligibility of individuals who are not citizens of the United States to enlist into the Armed Forces.

Subtitle C—Reserve component Personnel Matters

Requirements for physical examinations and medical and dental readiness for members of the Selected Reserve not on active duty (sec. 531)

The committee recommends a provision that would require an annual physical examination for members of the Selected Reserve. The provision would also require an annual report to the secretary concerned which documents the medical and dental readiness of the Reserve member to perform military duties.

The committee is concerned that there are continuing reports of Reserve members who are unable to deploy as a result of disqualifying physical or dental conditions. When this occurs, it erodes the readiness of units to perform their military mission. The committee recognizes that the requirement for an annual physical examination is more frequent than the existing five-year requirement. However, the committee believes that rigorous discipline to ensure medical and dental readiness is essential. Drilling members of the Reserve and National Guard are not seen by military physicians as frequently as their Active-Duty counterparts and thus will benefit from an annual physical examination.

Repeal of limitation on amount of financial assistance under Reserve Officers' Training Corps scholarship program (sec. 532)

The committee recommends a provision that would amend sections 2107 and 2107a of title 10, United States Code, to authorize the service secretaries to pay the costs of room and board for Reserve Officers' Training Corps (ROTC) cadets who are receiving scholarships when those costs exceed the cumulative cost of tuition, fees, books, and laboratory expenses. This provision offers additional flexibility to managers of ROTC programs in meeting the specific financial needs of participating students, and will assist the Army in achieving a planned 15 percent increase in Senior ROTC participation.

Procedures for suspending financial assistance and subsistence allowance for senior ROTC cadets and midshipmen of the basis of health-related conditions (sec. 533)

The committee recommends a provision that would amend section 2107 of title 10, United States Code, to require that the Secretary of Defense prescribe policies and procedures to ensure fairness and medically based decision making prior to suspension of financial assistance for senior Reserve Officers' Training Corps (ROTC) cadets and midshipmen under section 2107 of title 10, United States Code, and monthly subsistence allowance under section 209 of title 37, United States Code.

While the practices of each of the services regarding medical leaves of absence for cadets and midshipmen on ROTC scholarship have varied, each of the services and the Defense Finance and Accounting Service must incorporate and adhere to essential administrative due process before suspending or terminating ROTC scholarships following health-related incidents. As noted in the statement of managers accompanying section 555 of the Ronald W.

Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375), the committee expects the services to promptly implement uniform procedures prescribed by the Secretary of Defense for medical leaves of absence that will ensure medical officer evaluation under a prescribed standard of review prior to involuntary suspension of ROTC benefits for medical reasons.

Increase in maximum number of Army Reserve and Army National Guard cadets under Reserve Officers' Training Corps (sec. 534)

The committee recommends a provision that would amend section 2107a of title 10, United States Code, to double the number of Reserve Officers' Training Corps (ROTC) cadets who would be authorized to perform their obligated service in the Army Reserve and Army National Guard. This provision would encourage more members of the Army Reserve and National Guard to enter ROTC while attending college, and assist in meeting the need for additional company grade officers in the Army Reserve and Army National Guard.

Modification of educational assistance for Reserves supporting contingency and other operations (sec. 535)

The committee recommends a provision that would modify section 16163 of title 10, United States Code, pertaining to educational assistance for Reserves supporting contingency and other operations. The change would clarify that the Secretary of Veterans Affairs would prescribe the form and manner of an eligible member's election among multiple educational benefits. The Department of Veterans Affairs administers the educational programs and the eligible members' claims for assistance.

The committee also recommends a modification of section 16165 of title 10, United States Code, that would allow a member of the Selected Reserve, who incurs a short break (not to exceed 90 days) from service in the Selected Reserve, to continue to be eligible to receive educational assistance under regulations prescribed by the Secretary of Defense, if that member continues to serve in the Ready Reserve. This would allow members who desire to shift Reserve components or to transfer to a new unit the opportunity to do so without jeopardizing their educational benefit under this section. This would also allow a person who has separated from the Selected Reserve to remain eligible for this benefit if they rejoin the Selected Reserve within the time indicated, provided the individual remains in the Ready Reserve during the break in Selected Reserve service.

Repeal of limitation on authority to redesignate the Naval Reserve as the Navy Reserve (sec. 536)

The committee recommends a provision that would amend section 517(a) of the Ronald W. Reagan National Defense Authorization Act of Fiscal Year 2005 (Public Law 108-375) to eliminate the requirement that implementation of the Secretary of the Navy's decision to redesignate the Naval Reserve not take place before the date that is 180 days after the date on which the Secretary submits

recommended conforming legislation. On April 29, 2005, the President approved the redesignation of the U. S. Naval Reserve as the U. S. Navy Reserve. The committee supports prompt implementation of this change, and directs the Secretary of the Navy to comply with the requirement to submit conforming legislation no later than August 1, 2005.

Performance by Reserve component personnel of operational test and evaluation and training relating to new equipment (sec. 537)

The committee recommends a provision that would authorize the Secretary of the Army to carry out a pilot program through September 2010 to evaluate the feasibility and advisability of utilizing members of the Reserve components of the Army, rather than contractor personnel, to perform test, evaluation, and new equipment training, and related activities. Under this authority, up to \$10.0 million, in any fiscal year of funds available to the Army for multiyear purposes in appropriations for Research, Development, Test, and Evaluation and for procurement, may be transferred to a Reserve component military personnel account in the amounts necessary to reimburse that account for the costs of military pay and allowances of reservists participating in this program.

Relying on soldiers to perform developmental testing could prove beneficial in providing soldier feedback earlier in the development cycle, enabling program managers to identify potential problems and required engineering changes sooner, reducing cost increases and delays, and providing soldiers with hands-on experience in new and emerging systems.

Use of multiyear Research, Development, Test, and Evaluation funds and procurement funds to reimburse the pay, allowances, and expenses of Reserve component members could prove to be a practical and efficient means to achieve the benefits of soldier involvement in testing and evaluation functions.

Subtitle D—Military Justice and Related Matters

Modification of periods of prosecution by courts-martial for murder, rape, and child abuse (sec. 551)

The committee recommends a provision that would amend Article 43 of the Uniform Code of Military Justice (10 U.S.C. 843) to: (1) clarify that all murders are included in the class of offenses that has an unlimited statute of limitations; (2) include rape in that class of offenses; and (3) modify the statute of limitations for child abuse offenses.

The National Defense Authorization Act for Fiscal Year 2004 (Public Law 108–136) amended article 43 to provide that certain enumerated child abuse offenses could be tried by court-martial if sworn charges and specifications were received before the child attained the age of 25 years. The analogous federal statute of limitations, section 3283 of title 18, United States Code, simply provides that the limitation is equal to the life of the child.

This provision would conform the limitation in article 43 to the federal statute, with one modification. It has been argued that the intent of Congress to lengthen the limitation in section 3283 would

be undercut in cases where the child died early, whether as a result of the abuse or not. In order to avoid this problem, the committee recommends a provision that would set the limitation at the life of the victim or five years after the offense, whichever is greater.

Finally, the provision would include kidnapping and certain aggravated offenses under title 18 of the United States Code in the category of child abuse offenses to which the extended statute of limitations would apply.

Establishment of offense of stalking (sec. 552)

The committee recommends a provision that would amend the Uniform Code of Military Justice (chapter 47 of title 10, United States Code) to establish stalking as a separate offense under the code. Stalking is presently punishable under article 134 of the code (10 U.S.C. 934), if the government can prove conduct amounting to stalking, as well as proving that the conduct was prejudicial to good order and discipline. The offense may also be punished under article 93 of the code (10 U.S.C. 893) if the victim is subject to the orders of the accused. The provision would authorize prosecution of stalking within the compass of a single punitive article of the code, without the necessity of proving prejudice to good order and discipline under article 134 and without the subordination required by article 93. Every State and the District of Columbia has enacted some form of stalking legislation.

The provision is patterned after the Model Antistalking Code for the States developed by the National Criminal Justice Association for the Department of Justice. Approximately half the States have enacted statutes based in whole or in part on this model code. The provision would require a course of conduct, including repeatedly maintaining visual or physical proximity to the victim; and threatening or otherwise placing the victim or the victim's immediate family in reasonable fear of death or bodily harm, including but not limited to sexual assault.

Clarification of authority of military legal assistance counsel (sec. 553)

The committee recommends a provision that would amend section 1044 of title 10, United States Code, to provide that judge advocates or civilian attorneys who are authorized to provide military legal assistance to military personnel and their dependents may do so without regard to the licensing requirements of the State in which the assistance is rendered.

While legal assistance has been provided under service regulations for decades, and was explicitly authorized in section 1044 of title 10 in 1984, questions have been raised by some as to whether attorneys providing such assistance outside the States in which they are licensed are engaging in the unauthorized practice of law. This provision would codify the long-accepted practice with respect to the provision of legal assistance.

**Administrative censures of members of the Armed Forces
(sec. 554)**

The committee recommends a provision that would authorize the Secretary of Defense and the service secretaries to issue administrative censures in writing to members of the Armed Forces. An administrative censure is a statement of adverse opinion or criticism with respect to the conduct or performance of duty by a military member. Such administrative censures would be final when issued. Under controlling regulations issued by the Secretary of Defense, such censures could be made part of the member's official record and, if this option is exercised, should be subject to notice to the member with the right of rebuttal. The issuance of an administrative censure by the Secretary of Defense and the service secretaries would not be subject to appeal.

The committee notes that the Secretary of Defense and the secretaries of the military departments possess inherent authority separate from, but fully consistent with Article 15 of the Uniform Code of Military Justice, to administratively censure members of the Armed Forces. The Department of the Navy, by regulation in its Manual of the Judge Advocate General, has long articulated the authority of the Secretary of the Navy to administratively censure members. Nonetheless, the committee believes that a specific grant of this authority to the Secretary of Defense and the service secretaries with a requirement for the Secretary of Defense to issue controlling regulations will provide a uniform standard throughout the Department of Defense and provide an important means for civilian leaders to ensure accountability.

**Reports by officers and senior enlisted personnel of matters
relating to violations or alleged violations of criminal
law (sec. 555)**

The committee recommends a provision that would direct the Secretary of Defense to prescribe regulations by January 1, 2006, that would require active duty and reserve officers and senior non-commissioned officers and petty officers above the grade of E-6 to report to appropriate military authority their arrest, investigation, charging, detention, adjudication, conviction, or any other legal finding of culpability for offenses other than minor traffic violations.

Imposing a duty to report such involvement, at the earliest possible time after its occurrence, would avoid situations in which information material to an officer's or senior enlisted member's duties and assignments is concealed and individual and unit readiness may be adversely affected. Additionally, the services must be informed of information that is potentially relevant to adjudications of security clearances and determinations of administrative and statutory selection boards. The committee trusts that members covered by this provision generally adhere to this standard as a matter of personal integrity and responsibility; however, the committee believes that the duty to report this information in a timely manner should be unequivocally stated in regulations in order to ensure compliance.

This provision would also require the Secretary of Defense to prescribe procedures to ensure that information relating to the inci-

dents described above is timely forwarded to the parent service of the officer or senior enlisted member involved in order to avoid instances in which incidents committed on one service's installations are not reported to the parent service of the officer or senior enlisted member.

Subtitle E—Military Service Academies

Authority to retain permanent military professors at the Naval Academy after more than 30 years of service (sec. 561)

The committee recommends a provision that would authorize the Secretary of the Navy, upon recommendation from the Superintendent of the Naval Academy and concurrence with the Chief of Naval Operations, to continue on active duty permanent military professors at the Naval Academy beyond the normal statutory retirement for years of service for their grade. Permanent military professors in the grade of O-5, who are retained on active duty beyond 28 years of service, would remain eligible for promotion to the grade of O-6.

The committee believes that the Secretary of the Navy should have authority to retain certain exceptional permanent military professors at the Naval Academy on active duty beyond their statutory retirement, similar to the authority that the Secretary of the Army and the Secretary of the Air Force currently possess with regard to permanent professors at their respective academies. The committee also believes that permanent military professors in the grade of O-5, who are retained beyond 28 years of service, should remain eligible for promotion to the grade of O-6.

Permanent military professors on active duty at the Naval Academy are highly educated and represent a significant investment in a valuable and highly sought after resource. The Secretary of the Navy should have the authority to retain exceptional permanent military professors who have extensive college-level teaching experience, a doctorate, and military experience, who will benefit the mission of the Naval Academy.

Subtitle F—Administrative Matters

Clarification of leave accrual for members assigned to a deployable ship or mobile unit or other duty (sec. 571)

The committee recommends a provision that would amend section 701 of title 10, United States Code, to clarify and expand eligibility for members assigned to a deployable ship, mobile unit, or other designated duty to retain accumulated leave at the end of a fiscal year. The committee intends by this provision that military members who serve on extended operational deployments and perform arduous duty in support of the global war on terrorism, and who are impeded in their ability to take annual leave, should be permitted to accrue up to 120 days of leave. Limitation on conversion of military medical and dental billets to civilian positions (sec. 572)

Limitation on conversion of military medical and dental billets to civilian positions (sec. 572)

The committee recommends a provision that would limit conversion of any military medical or dental billet to a civilian position until 90 days after the Secretary of Defense certifies to the congressional defense committees that: (1) conversion does not lead to an increase in civilian health care costs; (2) the conversion has been subjected to review in light of joint medical and dental requirements of the uniformed services; and (3) market surveys conducted in areas affected by such conversion suggest that there are available qualified civilian providers to replace military medical and dental personnel.

The committee is concerned that no credible plan exists for conversion of military medical and dental billets to civilian positions across the military health care system. It has been reported that one service, for example, is converting military medical assets for which there are shortfalls in another service. Additionally, the committee has learned that, in some areas affected by military to civilian conversions, civilian markets have not been able to respond to military requirements for civilian health and dental providers, largely due to salary disparities.

The committee is concerned that the Department of Defense has not considered all of the factors, including joint warfighting requirements and civilian compensation that are necessary to effect a rational reshaping of active duty and reserve military billets in the medical and dental fields. The committee is concerned that the failure of the Department to meet the requirement contained in section 595 of the statement of managers accompanying the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375), which required the Secretary to report no later than 90 days following enactment on the plans of each military department for military and dental military-to-civilian conversions, is further evidence of the absence of a comprehensive and rational plan.

Subtitle G—Defense Dependents Education Matters

Expansion of authorized enrollment in Department of Defense dependents schools overseas (sec. 581)

The committee recommends a provision that would authorize the Secretary of Defense to provide tuition-free enrollment in Department of Defense dependents schools overseas for the children of full-time, locally-hired U.S. citizens. It is the committee's intent that this authority be utilized in an equitable manner in any overseas location based on the requirements of the combatant commander.

Assistance to local educational agencies with significant enrollment increases in military dependent students due to troop relocations, creation of new units, and realignments under BRAC (sec. 582)

The committee recommends a provision that would authorize \$15.0 million annually in Operation and Maintenance, Defense-wide activities, for fiscal years 2006, 2007, and 2008 for special as-

sistance to local educational agencies that experience an increase in student dependents of service members and Department of Defense civilian employees as a result of global rebasing, the creation or activation of new military units, or base realignment and closures. The program would assist local education agencies that experience an increase of 250 or more military and Department of Defense civilian dependent students to make necessary infrastructure adjustments in a timely manner.

Assistance to local educational agencies that benefit dependents of members of the Armed Forces and Department of Defense civilian employees (sec. 583)

The committee recommends a provision that would authorize \$30.0 million in Operation and Maintenance, Defense-wide activities, for continuation of the Department of Defense's assistance program to local educational agencies that benefit dependents of service members and Department civilian employees.

Impact aid for children with severe disabilities (sec. 584)

The committee recommends a provision that would authorize \$5.0 million in Operation and Maintenance, Defense-wide, for impact aid payments for children with disabilities under section 8003(d) of the Elementary and Secondary Education Act of 1965 (20 U.S.C. 7703(d)), using the formula set forth in section 363 of the Floyd D. Spence National Defense Authorization Act for Fiscal Year 2001 (Public Law 106-398), for continuation of the Department of Defense's assistance program to local educational agencies that benefit dependents with severe disabilities.

Subtitle H—Other Matters

Policy and procedures on casualty assistance to survivors of military decedents (sec. 591)

The committee recommends a provision that would require the Secretary of Defense by January 1, 2006, to develop and promulgate a comprehensive policy on the provision of casualty assistance to survivors and next of kin of members of the Armed Forces who die during their military service.

The policy shall include elements that the committee believes should, to the maximum extent possible, reflect uniform casualty assistance procedures and practices to be employed by the services, including: (1) initial notification of death to primary and secondary next of kin and any subsequent notifications; (2) transportation and disposition of remains of military decedents; (3) qualifications, assignment, training, duties, supervision, and accountability for the performance of casualty assistance responsibilities; (4) the relief or transfer of casualty assistance officers, including notifications to survivors and next of kin of the reassignment to other duties; (5) centralized case management procedures for casualty assistance by each military department; (6) the provision of personalized information on benefits available to survivors; (7) the provision of financial counseling; (8) a process for registering and responding to complaints; (9) liaison with the Department of Veterans Affairs and the Social Security Administration in order to ensure prompt resolution

of issues; and (10) data collection and surveys aimed at ensuring the needs of survivors are identified and, whenever possible, addressed.

The committee recognizes that the military services place great importance on casualty notification and assistance and that personnel assigned casualty assistance duty have provided timely, sensitive, and responsive service to survivors of military decedents in the vast majority of cases. Testimony received in hearings conducted by the Committee on Armed Services of the Senate and the Committee on Veterans' Affairs of the Senate in February 2005 established, however, that the complexity of federal benefit programs and the duration of the period in which survivors require assistance demand a uniform policy and coordinated efforts by the services, the Office of the Secretary of Defense, and other federal agencies responsible for providing assistance to survivors and next of kin of military personnel killed while serving their nation.

Modification and enhancement of mission and authorities of the Naval Postgraduate School (sec. 592)

The committee recommends a provision that would amend section 7041 of title 10, United States Code, to modify the mission of the Naval Postgraduate School to include professional education and a combat-related focus to the purposes of education at the institution.

The committee believes that the mission of the Naval Postgraduate School should include a greater emphasis on advanced instruction and professional and technical education to enhance combat effectiveness in support of national security, rather than merely advanced instruction and technical education of commissioned officers "in their practical and theoretical duties" as reflected in the existing mission statement in section 7041 of title 10, United States Code.

The committee also recommends a modification of section 7045 of title 10, United States Code, to allow the Secretary of the Navy to permit eligible enlisted members of the Armed Forces to receive instruction from the Naval Postgraduate School in certificate programs and courses required for the performance of their duties.

The committee believes that highly qualified and carefully screened enlisted personnel may also benefit from instruction at the Naval Postgraduate School in graduate level, nondegree certificate programs and courses required for the performance of their duties. To the extent that the existing facility and faculty at the Naval Postgraduate School can be utilized to provide such education, this authority represents an efficient use of educational resources.

Expansion and enhancement of authority to present recognition items for recruitment and retention purposes (sec. 593)

The committee recommends a provision that would amend chapter 134 of title 10, United States Code, to authorize the procurement and award of recognition items to Active Duty and Reserve military personnel, family members, and certain other individuals under prescribed conditions.

Section 520 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108–375) authorized through December 31, 2005, the award of recognition items, such as coins, medals, trophies, badges, flags, posters, paintings, or other similar items to members of the Army Reserve, Army National Guard, and Air National Guard. The committee believes that this authority has proven valuable during time of war in enabling commands to appropriately express appreciation for the dedicated service and sacrifices of individual members, family members, and others who have served and supported the Armed Forces, and that this authority should be extended to all Active and Reserve components through December 31, 2007. The committee expects the implementing regulations to include reasonable limitations to prevent excessive expenditures of funds under this authority.

Requirement for regulations on policies and procedures on personal commercial solicitations on Department of Defense installations (sec. 594)

The committee recommends a provision that would require the Department of Defense, not later than January 1, 2006, to prescribe regulations, or modify existing regulations, relating to commercial solicitation including the sale of life insurance and securities, on Department of Defense installations.

The committee notes that the Department has been attempting for over two years to revise Department of Defense Directive 1344.7 entitled “Personal Commercial Solicitation on DOD Installations,” which is set forth in part 43 of title 32 of the Code of Federal Regulations. The proposed policy, which was published in the Federal Register of April 19, 2005, represents a substantial improvement over the current directive policy by establishing specific prohibitions and procedures aimed at preventing abusive sales tactics by commercial agents. For example, the proposed policy would: (1) require reporting of violations to higher headquarters and direct the Under Secretary of Defense for Personnel and Readiness to maintain and make available to installation commanders the current master file of all individual agents, dealers, and companies who have their privileges withdrawn at any Department installation; (2) permit insurers to solicit on Department installations only if they are licensed under the insurance laws of the State in which the installation is located; (3) prohibit Department personnel from representing any insurer or acting as an agent of an insurer in any official or business capacity with or without compensation; (4) prohibit the use of an agent as a participant in any service-sponsored education or orientation program; and (5) set limits on advertising and solicitation of personal contact information in connection with commercial sponsorship of Department morale, welfare, and recreation programs or events.

The committee believes that the repeal of previous provisions relating to the Department commercial solicitation policy in previous authorization and appropriations acts is necessary to allow the Department to implement changes at the earliest possible time with the objective of promoting the welfare of Department personnel as consumers and in order to prevent abuses of service members by private commercial interests.

Federal assistance for State programs under the National Guard Youth Challenge program (sec. 595)

The committee recommends a provision that would amend section 509(d) of title 32, United States Code, to phase in over 3 years a change in the federal to state matching funds ratio for the National Guard Youth Challenge program. The provision would increase the amount of federal funds that may be provided in fiscal year 2006 to not more than 65 percent of a State program's operating costs; 70 percent in fiscal year 2007; and 75 percent in fiscal year 2008 and each subsequent fiscal year. The provision would also authorize an additional \$15.0 million in Operations and Maintenance, Defense-wide, for the National Guard Youth Challenge program.

Items of Special Interest

Air Force future total force planning

In section 587 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375), the committee directed a report by the Air Force describing the manner in which current blended wings are functioning and the current and future plans of the Air Force to implement the blended wing concept.

The Air Force's report focused on the experience of the Air Force's only blended wing, the 116th Air Control Wing located at Robins Air Force Base, Georgia, which operates the E-8C Joint Surveillance Target Attack Radar System. The Air Force concluded that the 116th Air Control Wing had achieved a significant number of operational successes since its inception in 2002. Most significantly the Wing deployed successfully in support of Operations Iraqi Freedom and Enduring Freedom, with personnel days deployed totaling 132,674. The unit conducted 292 combat sorties over 3,130 hours with a 96 percent mission effective rate.

The success of the 116th Air Control Wing is a tribute to the tenacity and dedication of its assigned personnel and their leaders. However, this success was achieved despite numerous organizational, administrative, legal, and cultural barriers to true integration of Active Duty and Air National Guard units. The Air Force concluded that the challenges of operating a blended wing are substantial enough that future "blending" is not advisable in the current legal environment and that, until the necessary changes are in place, reliance should instead be placed on "associate" models with units that share the weapon systems of an equipped unit and perform the same mission. Even some of these models, however, are constrained by legislative and fiscal law limitations.

The committee supports the Air Force commitment to full integration of the Air Force Reserve and Air National Guard with its active forces, and urges the Air Force to continue to refine the various models of integration to maximize readiness, training, and enhanced mission capability. The committee expects the Secretary of Defense to promptly work towards addressing the issues identified in the Air Force report that present barriers to essential Active and Reserve component integration and expects to be advised of the rel-

evant statutory issues pursuant to making this integration successful.

Opportunity for general or flag officer review of involuntary administrative separation of victims of sexual assault and protection against reprisals for victim advocates

The committee recommends that the Department of Defense consider, as part of its implementation of policies on sexual assault, a requirement for victims of sexual assault who are being involuntarily separated from active-duty service to be afforded, on a voluntary basis, an opportunity for a general or flag officer review of their case. The committee believes that providing an option to victims of sexual assault for general or flag officer interview and review could be a valuable safeguard on the ultimate disposition of such cases within the military departments, especially as newly developed policies and programs on sexual assault are being implemented.

The committee also recommends that the Department consider what additional actions, if any, could be taken to ensure timely and adequate protection against reprisal directed at victim advocates, to include protection for military members, Department civilian employees, Department contractors, and volunteers.

The committee directs the Secretary of Defense to report to the congressional defense committees by March 1, 2006, on the Department's review of these matters and what actions it considers necessary to address them.

Premium conversion/flexible spending account options for service members

The committee is concerned that uniformed service members do not have access to premium conversion and flexible spending account options that allow pre-tax payment of health and dental insurance premiums and out-of-pocket health care expenses for family member health care needs. The committee is also concerned that uniformed service members do not have access to flexible spending account options that can be used to purchase child care services. The committee directs the Secretary of Defense to provide a report to the congressional defense committees by March 1, 2006, on a plan to evaluate and implement these programs for uniformed service members, including identification of any administrative or statutory barriers to achieving their implementation.

The committee believes that active-duty members and Selected Reserve members should be able to use premium conversion to pay dental insurance premiums, and Selected Reserve personnel should be able to use it to pay TRICARE Reserve Select premiums authorized by the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375). The committee believes that members should also have access to flexible spending accounts for the purpose of paying for child care services. The committee recognizes that Active-Duty and Reserve family members can incur out-of-pocket expenses related to dependent care, pharmacy copays, TRICARE Standard deductibles and copays, dental care deductibles and copays, expenses for eyeglasses and contact lenses, premium payments for dental and medical care, and child care.

Western Governors University

Western Governors University (WGU), a competency-based institution of higher learning, offers a fully accredited baccalaureate degree based on a direct assessment of student learning, rather than on an accumulation of credit hours. WGU, created by 19 Governors from America's Western States, was included in the Higher Education Amendments of 1998 (Public Law 105-244), which made federal financial assistance available to qualified students. WGU currently has four educational projects with the Department of Defense supporting the Air War College, Junior ROTC, Special Operations Command, and Air Force Community Colleges at Maxwell Air Force Base.

The committee commends the Department and WGU for partnering to provide educational opportunities for military personnel, and encourages the Department and WGU to explore additional opportunities to expand educational opportunities for service members.

TITLE VI—COMPENSATION AND OTHER PERSONNEL BENEFITS

Subtitle A—Pay and Allowances

Eligibility for additional pay of permanent military professors at United States Naval Academy with over 36 years of service (sec. 601)

The committee recommends a provision that would amend section 203 of title 37, United States Code, to authorize payment of additional pay in the amount of \$250 a month to permanent military professors at the Naval Academy who have over 36 years of service. This additional pay is already authorized for permanent professors at the U.S. Military Academy and the Air Force Academy.

Enhanced authority for agency contributions for members of the Armed Forces participating in the Thrift Savings Plan (sec. 602)

The committee recommends a provision that would amend section 211(d) of title 37, United States Code, to authorize service secretaries to make matching contributions to the Thrift Savings Fund pursuant to an agreement with an enlisted member covering the duration of the member's initial enlistment.

The committee believes that expanding the authority of the services to match savings contributions of first term enlistees would encourage habits of financial responsibility among the most junior military personnel. A matching contributions program could also provide an effective recruiting incentive for young men and women who are considering service in the Armed Forces and would be tested through a limited pilot program authorized elsewhere in this Act.

Permanent authority for supplemental subsistence allowance for low-income members with dependents (sec. 603)

The committee recommends a provision that would amend section 402a of title 37, United States Code, to make permanent the authority to pay the supplemental subsistence allowance for low-income members with dependents. The availability of this allowance enables increases of up to \$500 per month in the basic allowance for subsistence for junior enlisted members who would otherwise qualify to receive food stamps under state-administered programs. Since implementation of this allowance on May 1, 2001, the number of military members who have qualified for food stamps has significantly declined. The committee believes this program should be made permanent in order to continue to assist in meeting the financial needs of junior enlisted personnel and their families.

Modification of pay considered as saved pay upon appointment of an enlisted member as an officer (sec. 604)

The committee recommends a provision that would amend section 907 of title 37, United States Code, with respect to “saved pay,” or the stabilization of pay and allowances that an enlisted member or warrant officer in the grade of W-4 may receive after accepting an appointment as a commissioned officer. The provision would update and add to the list of special and incentive pays and allowances that should be considered in determining the amount of pay and allowances of a grade formerly held by an officer who continues to perform the duties creating the eligibility for such pay and allowances and may be entitled to saved pay treatment.

Subtitle B—Bonuses and Special and Incentive Pays

One-year extension of certain bonus and special pay authorities for Reserve forces (sec. 611)

The committee recommends a provision that would extend for one year the authority to pay the Selected Reserve reenlistment bonus, special pay for enlisted members assigned to certain high priority units in the Selected Reserve, the Ready Reserve enlistment and reenlistment bonus, and the prior service enlistment bonus. Additionally, the provision would authorize payment under section 308g(h) of title 37, United States Code, of the non-prior service enlistment bonus in elements of the Ready Reserve other than the Selected Reserve. The committee notes that the Selected Reserve enlistment bonus and the Selected Reserve affiliation bonus authorized under sections 308c(e) and 308e(e) of title 10, United States Code, respectively, have been amended and renewed by other provisions of this Act.

One-year extension of certain bonus and special pay authorities for certain health care professionals (sec. 612)

The committee recommends a provision that would extend for one year the authority to pay the nurse officer candidate accession bonus, the accession bonus for registered nurses, incentive special pay for nurse anesthetists, special pay for Selected Reserve health professionals in critically short wartime specialties, the accession bonus for dental officers, the accession bonus for pharmacy officers, and to repay education loans for certain Selected Reserve health professionals.

One-year extension of special pay and bonus authorities for nuclear officers (sec. 613)

The committee recommends a provision that would extend for one year the authority to pay the special pay for nuclear-qualified officers extending their period of active service, the nuclear career accession bonus, and the nuclear career annual incentive bonus.

One-year extension of other bonus and special pay authorities (sec. 614)

The committee recommends a provision that would extend for one year the authority to pay the aviation officer retention bonus, assignment incentive pay, the reenlistment bonus for active mem-

bers, the enlistment bonus for active members, the retention bonus for members with critical military skills, and the accession bonus for new officers in critical skills.

Payment and repayment of assignment incentive pay (sec. 615)

The committee recommends a provision that would amend section 307a of title 37, United States Code, to authorize payment of assignment incentive pay in a lump sum or in installments pursuant to the terms of a written agreement. The committee believes that the ability of the services to offer lump sum or installment payments of assignment incentive pay, in addition to existing authority for monthly payments, would offer greater flexibility and, in many cases, enhance the attractiveness of this incentive. In all cases in which lump sum or installment payments of assignment pay are authorized, the provision would require that a written agreement be executed.

Increase in amount of selective reenlistment bonus for certain senior supervisory nuclear qualified enlisted personnel (sec. 616)

The committee recommends a provision that would amend section 308 of title 37, United States Code, to authorize payment of up to \$75,000 to an enlisted member of the naval service who has completed at least 10, but not more than 14, years of active duty, is currently qualified for duty in connection with the supervision, operation, and maintenance of naval nuclear propulsion plants, and is qualified in a military skill designated as critical by the Secretary of Defense. The committee believes that authorization of this increase in the amount of the selective reenlistment bonus for designated nuclear qualified enlisted personnel above the current limit of \$60,000 is necessary to address shortages and improve retention of this class of highly trained and experienced personnel.

Consolidation and modification of bonuses for affiliation or enlistment in the Selected Reserve (sec. 617)

The committee recommends a provision that would amend section 308c and repeal section 308e of title 37, United States Code, in order to consolidate these provisions and authorize an enhanced affiliation bonus in an amount not to exceed \$10,000 for service in the Selected Reserve.

In section 618 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375), the conferees authorized an increase in the maximum amount of the Selected Reserve enlistment bonus under section 308c to \$10,000. This enlistment bonus assists the Reserve components in meeting their non-prior service recruiting objectives. The committee believes that an identical bonus authority is needed to provide an incentive to members who are separating from active duty, and who may have a continuing military service obligation, to affiliate with the Selective Reserve.

The current affiliation bonus under section 308e of title 37, United States Code, is inadequate to encourage members with active-duty experience to affiliate with the Selected Reserve with no

break in service upon completion of their active-duty obligation. Because of their military training and experience, these individuals should be given every reasonable incentive to continue serving in the Selected Reserve.

Expansion and enhancement of special pay for enlisted members of the Selected Reserve assigned to certain high priority units (sec. 618)

The committee recommends a provision that would amend section 308d of title 37, United States Code, to increase the amount of special pay that may be awarded to members of the Selected Reserve assigned to certain high priority units from \$10 to \$50 for each regular period of instruction or period of appropriate duty. The committee believes that increasing this special pay will assist in improving manning, including company grade officer shortages, in high priority units of the Selected Reserve.

Retention incentive bonus for members of the Selected Reserve qualified in a critical military skill or specialty (sec. 619)

The committee recommends a provision that would amend chapter 5 of title 37, United States Code, to authorize a retention incentive bonus for members of the Selected Reserve qualified in a critical military skill or specialty. This bonus would offer an effective retention incentive for individuals possessing key specialties and qualifications in the Selected Reserve, and would be structured along the lines of the critical skills retention bonus offered to active-duty personnel under section 323 of title 37, United States Code.

Termination of limitation on duration of payment of imminent danger special pay during hospitalization (sec. 620)

The committee recommends a provision that would amend section 310 of title 37, United States Code, to extend the period during which a member who is hospitalized as a result of injuries or wounds incurred as a result of hostile action may continue to receive special pay for duty subject to hostile fire or imminent danger. Under current law, continuation of such special pay is limited to three months. The committee believes that eligible members should receive special pay for the duration of their hospitalization.

Authority for retroactive payment of imminent danger special pay (sec. 621)

The committee recommends a provision that would amend section 310 of title 37, United States Code, to authorize the Secretary of Defense to determine the date from which members assigned to duty in an area in which the members were subject to the threat of physical harm or imminent danger are eligible to receive this special pay. This provision would preclude the need for legislation authorizing back pay as a consequence of delays within the Department of Defense in determining the eligibility of members for special pay under section 310. The most recent example of such legislation was included in section 620 of the National Defense Authorization Act for Fiscal Year 2004 (Public Law 108-136).

Authority to pay foreign language proficiency pay to members on active duty as a bonus (sec. 622)

The committee recommends a provision that would amend section 316 of title 37, United States Code, to authorize payment of foreign language proficiency pay to members on active duty as a lump sum bonus. In section 620 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108–375) the amount of foreign language proficiency pay was increased from \$300 to \$1,000 per month. The ability to offer a lump sum bonus under certain conditions, in an amount not to exceed \$12,000, would serve to enhance the effectiveness of this incentive for members skilled in foreign languages to continue serving on active duty.

Incentive bonus for transfer between the Armed Forces (sec. 623)

The committee recommends a provision that would authorize payment of an incentive bonus not to exceed \$2,500 to military members of the Active and Reserve components who transfer from the regular or Reserve component of one service to the regular or Reserve component of another service.

The committee notes that the Navy and Air Force intend to significantly reduce the size of their Active and Reserve components in anticipation of force structural changes. At the same time, the Army and Marine Corps are experiencing recruiting challenges and, in some areas, shortfalls. The committee believes that the experience and skills accrued by military members, combined with their possessing required qualifications and continuing motivation to serve, should be tapped whenever possible to meet recruiting needs. While so called “blue to green” programs to date have experienced some success, the committee believes this bonus has the potential to encourage more individuals to accept the challenges inherent in such changes in service.

Subtitle C—Travel and Transportation Allowances

Transportation of family members in connection with the repatriation of service members or civilian employees held captive (sec. 631)

The committee recommends a provision that amends chapter 7 of title 37, United States Code, and chapter 57 of title 5, United States Code, to authorize travel and per diem allowances for up to three family members of military personnel or federal civilian employees who have been held captive, as determined by the secretary concerned, and who are being repatriated to a site inside or outside the United States. This provision ensures that family members of repatriated service personnel and civilian employees are able to travel to the location of their loved ones upon their return to U.S. control.

Subtitle D—Retired Pay and Survivor Benefits

Enhancement of death gratuity and life insurance benefits for deaths from combat-related causes or causes incurred in combat operations or areas (sec. 641)

The committee recommends a provision that would amend chapter 75 of title 10, United States Code, effective October 1, 2005, to increase the amount of the death gratuity payable under sections 1475 through 1478 from \$12,000 to \$100,000 under certain conditions. Payment in the amount of \$100,000 to survivors would be authorized in the case of a death of a service member on active duty which resulted from wounds, injuries, or illnesses incurred under the combat-related conditions specified in section 1413a(e)(2) of title 10, United States Code, specifically: (1) as a direct result of armed conflict; (2) while engaged in hazardous service; (3) in the performance of duty under conditions simulating war; or (4) through an instrumentality of war. Additionally, the increased death gratuity of \$100,000 would be payable if the death occurred in an operation or area designated as a combat operation or a combat zone, respectively, by the Secretary of Defense.

The provision would also amend section 1967 of title 38, United States Code, to increase from \$250,000 to \$400,000 the maximum amount of coverage available under the Servicemembers' Group Life Insurance (SGLI) program. The provision would also authorize the military services to provide up to \$150,000 in coverage for members who die as a result of wounds, illness, or injury incurred while serving in an operation or area that the Secretary designates as a combat operation or a zone of combat, respectively. The total amount of insurance payable under any circumstances would not exceed \$400,000. In the case of insured members who are married, the provision would require that notice be given to spouses regarding an election by the member to decline coverage under SGLI or to choose coverage in an amount less than the maximum amount of \$400,000. Spouses must also be notified of a redesignation of a beneficiary or beneficiaries by an insured member.

Subtitle E—Other Matters

Payment of expenses of members of the Armed Forces to obtain professional credentials (sec. 651)

The committee recommends a provision that would authorize payment to members of the Armed Forces for the costs of obtaining professional credentials, licenses, and certifications. The committee notes that this authority is available to federal civilian employees under section 5757 of title 5, United States Code. The military services increasingly have come to rely on commercially available systems, products, and services with certification standards corresponding to military occupational specialties in order to avoid duplication and costs of training programs. This provision would not extend authority to pay military members for the costs of meeting basic qualifications for entry into specific communities and professions, e.g., bar examinations and licensing of health professionals.

Pilot program on contributions to Thrift Savings Plan for initial enlistees in the Armed Forces (sec. 652)

The committee recommends a provision that would require the Secretary of the Army to conduct a pilot program in order to assess the extent to which contributions by the Army to the Thrift Savings Plan on behalf of first term enlistees would assist in recruiting non-prior service enlistees and result in establishing habits of financial responsibility. A separate provision in the act authorizes the service secretaries to make matching contributions to the Thrift Savings Fund on behalf of first term enlistees under section 211(d) of title 37, United States Code.

The committee expects the Army to develop a pilot program that will assist in determining the cost and effectiveness of an enhanced "matching funds" Thrift Savings Plan option for first term enlistees. While enlistment bonuses and education benefits have proven utility in encouraging voluntary service, the committee believes that an enhanced Thrift Savings Plan conducted under the provisions of section 211(d) of title 37, United States Code, as revised by another provision of this Act, may assist the Army in meeting recruiting goals. The committee expects the Army to collect data and conduct surveys that will allow a determination as to whether a matching funds Thrift Savings Plan has utility as a recruiting incentive and separately as a means to encourage participation in the Thrift Savings Plan among individuals who otherwise would not participate.

TITLE VII—HEALTH CARE

Subtitle A—Benefits Matters

Clarification of eligibility of Reserve officers for health care pending active duty following issuance of orders to active duty (sec. 701)

The committee recommends a technical correction to section 1074, title 10, United States Code, that would clarify the intent of that section to ensure that Reserve Officers' Training Corps (ROTC) graduates have access to military health benefits while awaiting active-duty status. This correction would ensure that ROTC graduates do not lose their eligibility for health care under section 1074(a), title 10, United States Code, before they report to active duty.

Limitation on deductible and copayment requirements for nursing home residents under the pharmacy benefits program (sec. 702)

The committee recommends a provision that would limit out-of-pocket pharmacy expenses for a beneficiary who is a resident of a nursing home and who is required, by state law, to use nursing home pharmacy services utilizing prepackaged pharmaceuticals, which are not part of the pharmacy network under TRICARE. The committee recognizes that there are a small number of individuals who would require such assistance, and directs the Department of Defense to find the most economical means available to implement this provision for those beneficiaries.

Eligibility of surviving active duty spouses of deceased members for enrollment as dependents in a TRICARE dental plan (sec. 703)

The committee recommends a provision that would expand eligibility for survivor benefits under the TRICARE dental plan authorized in section 1076a, title 10, United States Code, to include the active duty spouse of a member who dies while on active duty for a period of more than 30 days. The provision would extend eligibility to a surviving spouse who, because he or she was also on active duty for a period of more than 30 days, was ineligible to enroll in the TRICARE dental plan.

Increased period of continued TRICARE Prime coverage of children of members of the uniformed services who die while serving on active duty for a period of more than 30 days (sec. 704)

The committee recommends a provision that would extend health care coverage under TRICARE Prime for the children of an active-duty service member who dies while on active duty for a period of

more than 30 days. The provision would authorize any dependent child of a deceased service member to continue to receive benefits under TRICARE Prime as if the service member parent were still alive, and without annual premiums, until the age of 21, or 23 if enrolled in an educational program. Under current law, the children of members who die while on active duty retain benefits under TRICARE as if the member were still alive for only three years, at which time the active-duty benefit is replaced by a benefit equal to that for retirees, which has a lower priority for access to military treatment facilities and requires an annual enrollment fee for TRICARE Prime. The provision would apply to eligible dependent child survivors of members who have died while on active duty since October 7, 2001.

The committee believes that this provision will ensure that families with surviving children will experience no additional financial hardship or barriers to needed health care services under TRICARE, following the death of an active-duty service member.

Subtitle B—Planning, Programming, and Management

TRICARE Standard coordinators in TRICARE regional offices (sec. 711)

The committee recommends a provision that would require the designation of a position in each TRICARE Regional Office for the purpose of assisting beneficiaries who use the Standard option under TRICARE in identifying providers who will participate in the TRICARE program.

The committee is concerned that there is insufficient focus within the Department of Defense on assistance to users of TRICARE Standard, as well as outreach to community providers to encourage their participation in the TRICARE program. Moreover, despite statements by the Department that TRICARE contractors have specific mandates to perform this function, none have verified that such is the case. Thus, the committee is concerned that the intent of Congress, clearly expressed in the National Defense Authorization Act of 2004, to ensure improvements in access to TRICARE Standard, has not been fulfilled. The committee continues to receive reports of access problems, which may increase as members of the Selected Reserve, who elect coverage under the *TRICARE Reserve Select* Program, add to the demand for TRICARE Standard providers in areas not served by a military treatment facility.

Report on delivery of health care benefits through military health care system (sec. 712)

The committee recommends a provision that would require the Secretary of Defense to submit a report on the delivery of health care benefits through the military health system. The report would contain an analysis of the organization and costs of delivering health care benefits to current and retired military personnel and their families; an analysis of the costs of ensuring medical readiness; an assessment of the role of health benefits in recruitment and retention of members of the Armed Forces; and an assessment of the Department of Defense's experience in recruitment and retention of military and civilian medical and dental personnel. In

addition, the report would include recommendations for legislative or administrative action as the Secretary considers necessary to improve efficiency and quality in the provision of health care benefits and to ensure the sustainability of such benefits into the future.

Comptroller General report on differential payments to children's hospitals for health care for children dependents under TRICARE (sec. 713)

The committee recommends a provision that would require the Comptroller General to study the effectiveness of the system used by the Department of Defense to make differential payments to children's hospitals for health care services for severely ill or injured dependent children of members of the uniformed services under the TRICARE program. The committee is aware of ongoing reports that children's hospitals are reimbursed for health care services at levels that are less than the costs incurred by those hospitals for providing such services. The committee is concerned that the amount of the differential payment to children's hospitals (one component of payments to children's hospitals) has remained unchanged since its introduction in 1992.

The provision would require a report by the Comptroller General not later than May 1, 2006, together with such recommendations as the Comptroller General believes appropriate for modifications of the current system of differential payments to children's hospitals.

Repeal of requirement for Comptroller General reviews of certain Department of Defense-Department of Veterans Affairs projects on sharing of health care resources (sec. 714)

The committee recommends a provision that would repeal certain reporting requirements for the Comptroller General on defense and veterans affairs health resource sharing projects. The intent of the provision is to eliminate detailed reporting on individual sharing projects to allow the Comptroller General to focus on measurement of efforts by the Secretary of Defense and the Secretary of the Department of Veterans Affairs to institutionalize defense and veterans affairs health resource sharing projects in both health care systems.

Surveys on TRICARE standard (sec. 715)

The committee recommends a provision that would increase the survey questions required under section 723(a) of the National Defense Authorization Act for Fiscal Year 2004 (Public Law 108-136) concerning the continued viability of the TRICARE Standard option. The committee is concerned that the surveys carried out by the Department of Defense to date have been unable to gather sufficient information to permit better understanding of the availability of civilian medical providers to participate in the Standard option of the TRICARE program.

The committee believes that this provision would ensure that surveys capture necessary data on whether providers are aware of the TRICARE program, the percentage of their patient populations who receive TRICARE benefits, and whether or not civilian pro-

viders accept patients or new patients under the Medicare program.

Modification of health care quality information and technology enhancement report requirements (sec. 716)

The committee recommends a provision that modifies the annual health care quality reporting requirement of the Department of Defense to ensure that it more closely resembles state-of-the-art quality improvement efforts in the civilian sector as well as those developed by other public health agencies. The committee directs the Secretary of Defense to undertake a comprehensive review of health care quality programs of the Department's medical programs, to include civilian provider networks, in order to ensure that health care quality is monitored in an aggressive manner that results in health improvements for all eligible beneficiaries, regardless of age.

Modification of authorities relating to patient care reporting and management system (sec. 717)

The committee recommends a provision that would eliminate the requirement that the Department of Defense Patient Safety Center be located within the Armed Forces Institute of Pathology. In doing so, the committee intends to provide the Secretary of Defense greater flexibility to manage and consolidate patient safety initiatives for the Department.

Subtitle C—Other Matters

Report on adverse health events associated with use of anti-malarial drugs (sec. 731)

The committee recommends a provision that would require the Secretary of Defense to conduct a study of adverse health events that may be associated with the use of anti-malarial drugs, including mefloquine, also known as Lariam. The study would require the participation of epidemiological and clinical researchers outside the Department of Defense. It would also require an assessment of whether, and to what extent, Lariam may be a risk factor contributing to suicides among members of the Armed Forces.

The committee is aware of concerns by service members and their families that the anti-malarial drug Lariam (mefloquine) may have side effects which contribute to serious injury and/or major psychiatric disorders. The committee believes that a study will assist the Department in a more complete understanding of the potential effects of Lariam, if any, on military personnel.

Pilot projects on early diagnosis and treatment of Post Traumatic Stress Disorder and other mental health conditions (sec. 732)

The committee recommends a provision that would require the Secretary of Defense to carry out a minimum of three pilot projects to evaluate the efficacy of various approaches to improving the capability of the military and civilian primary health care systems to provide early diagnosis and treatment of Post Traumatic Stress

Disorder (PTSD) and other mental health conditions experienced by military members returning from combat.

The provision would require one of the pilot projects to be carried out at a military medical facility, which supports a large mobilization and demobilization site in order to evaluate and produce effective diagnostic and treatment approaches for use by primary care providers in the military health system. A second pilot would be carried out at the location of a National Guard or Reserve unit or units located more than 40 miles away from a military installation and whose personnel are served primarily by civilian community health resources. A third pilot would require the use and evaluation of Internet-based automated tools to aid military and civilian health care providers in the diagnosis and treatment of PTSD, as well as web-based tools available to family members to assist them in the identification of the emerging symptoms.

Studies of soldiers returning from Operation Enduring Freedom and Operation Iraqi Freedom have found that major depression, generalized anxiety, or PTSD occurred in as many as 17 percent of returning soldiers. Of those who were found to have a mental disorder, including PTSD, only 23 to 40 percent sought mental health care. Failure to seek appropriate treatment due to fear of the stigma associated with seeking such care, and the failure of the primary health care system to accurately diagnose PTSD puts service members who have been exposed to combat at risk for a worsening syndrome that can lead to severe mental illness, or in extreme cases, suicide.

The committee commends the Department of Defense for its recent issuance of a policy requiring additional mental health follow-up visits from 90 to 180 days after redeployment, but recognizes that more needs to be done to increase the capacity of the primary health care delivery system to identify and treat mild forms of these disorders, such as combat stress or normal depression following separation or reintegration, before these disorders progress to the point of requiring referral of the member for specialty mental health care. In addition, tools are needed to assist family members and military unit members in identifying and seeking appropriate resources for care of a member with emerging PTSD or other mental health disorder. The committee expects the Secretary to leverage emerging information technology to support the pilot projects required by this provision.

Items of Special Interest

Active-duty medical extension

The committee is pleased that the Army has taken steps, through the Medical Retention Processing program, to eliminate the hardship experienced by injured and ill Reserve component soldiers who have been erroneously removed from active-duty status during a period of extended active duty and have lost pay and benefits. The Comptroller General, in a February 2005 report entitled "Military Pay: Gaps in Pay and Benefits Create Financial Hardships for Injured Army National Guard and Reserve Soldiers", documented cases of Reserve component soldiers who, although entitled to continued pay and health benefits when extended on active

duty for the purpose of receiving medical care, experienced loss of pay and benefits during this crucial time of recovery because their active-duty status was not transmitted to the automated systems, which ensure timely pay and continued eligibility for benefits.

The committee directs the Comptroller General to periodically monitor implementation of the Medical Retention Processing program as a follow-up to its February 2005 report and submit the results of such follow-up to the congressional defense committees.

Comptroller General study of adequacy of TRICARE reimbursement for obstetrical, gynecological, and pediatric services

The committee is aware that some doctors and hospitals have declined to participate in the TRICARE program for obstetrical, gynecological, and pediatric services because of claims that reimbursement rates for TRICARE are too low.

The committee directs the Comptroller General to study the adequacy of reimbursements paid for obstetric, gynecological, and pediatric services to civilian providers in the TRICARE system. In carrying out the study, the Comptroller General shall consider:

(1) how TRICARE reimbursement rates for obstetrical, gynecological, and pediatric services are determined; (2) how these reimbursement rates compare to comparable rates paid by national health care plans offered by the Federal Employees Health Benefits Program; and (3) the sufficiency of the Department of Defense's authority to modify these rates when necessary to ensure access for military beneficiaries to high quality health care services.

The Comptroller General shall submit a report not later than April 15, 2006, to the congressional defense committees containing the results of the study and any recommendations to improve TRICARE provider participation and satisfaction in providing obstetric, gynecological, and pediatric services.

Increased awareness for families of TRICARE mental health benefits and the need for appropriate mental health services for families overseas

The committee is concerned that many military family members, including both active and mobilized National Guard and Reserve families, do not have adequate information about mental health benefits that are authorized under the TRICARE program. In light of evidence of the increased need for mental health services, the committee directs the Department of Defense to initiate, through appropriate command and communications channels, an extensive effort to reach all military families with information about mental health services that are authorized under the TRICARE program and how to access these services through both military and civilian providers. These services include outpatient mental health services, hospitalization for mental illness, substance abuse treatment, and partial hospitalization for therapeutic mental health services.

Additionally, the committee directs the Department to expand appropriate mental health services to family members in overseas locations through existing contracting mechanisms, which provide culturally and language-appropriate services to families of military personnel. The committee understands that military mental health

resources are appropriately being directed in support of active-duty members, both in the field and upon return from deployment, which often leaves families in overseas locations without access to appropriate and needed mental health services.

Specialty health care services referrals and authorizations

The committee is concerned that TRICARE beneficiaries have experienced problems in accessing specialty health care services as a result of the failure of the Department of Defense to provide automated support for the process of obtaining referral and authorization for specialty health care services, as promised in the transition to new TRICARE contracts. As a result, health care support contractors and military treatment facilities instituted costly manual processes that, although necessary, resulted in delays and long waiting times on health care information telephone lines for beneficiaries.

The committee is aware that efforts are now underway to redesign an automated process for obtaining health care referrals and authorizations. The committee expects senior-level involvement throughout the military health system to ensure its success as rapidly as possible. Further, the committee expects the Department to take advantage of best practices in the private sector in specialty referral management, including its partners— the U.S. Family Health Plans. The committee expects the Department to study successful practices by these plans in specialty referral management to ensure that the new system that is being developed will result in timely referrals and complete and accurate reporting from specialist to primary care provider, with no disruption or inconvenience to the beneficiary.

TITLE VIII—ACQUISITION POLICY, ACQUISITION MANAGEMENT, AND RELATED MATTERS

Overview

Introduction. One of the committee's most important duties is to provide oversight over the management of the hundreds of billions of dollars that the Department of Defense spends each year on the acquisition of supplies, services, and equipment—everything from office supplies to major weapon systems.

The enactment of the Federal Acquisition Streamlining Act of 1994 (Public Law 103–355) and the Clinger-Cohen Act in 1996 (as codified in chapter 113 of title 40, United States Code) signaled a fundamental change in the management of government acquisition programs. These statutes: (1) made it easier for federal agencies to purchase commercial items; (2) streamlined the processes for making small purchases; (3) eliminated the General Services Administration (GSA) as the gatekeeper for all federal information technology purchases; and (4) opened the door to government-wide acquisition contracts and other flexible multiple-award contracting vehicles.

As a result, the Department of Defense and other federal agencies gained new flexibility to purchase their own information technology products, to rapidly access technologies developed in the commercial marketplace, and to focus their attention on the larger acquisitions that account for the vast majority of purchasing dollars. These changes, coupled with the procurement “holiday” of the 1990's, made it possible for the Department of Defense to save billions of dollars by cutting its acquisition workforce by almost half in a period of just 10 years.

Unfortunately, the increased flexibility provided by acquisition reform has not always been used in the best interest of the Department of Defense and the taxpayer. Over the last five years, a series of audits of Department of Defense contracts by the Department of Defense Inspector General and the Government Accountability Office (GAO) have revealed case after case of inadequate acquisition planning, insufficient competition, overpriced contracts, inappropriate expenditures of funds, and lack of attention to contract management.

As a result, three of the twenty-five high risk areas across the federal government (those areas identified by GAO as most susceptible to fraud, waste, and abuse) are directly related to the Department of Defense acquisition system. These are: weapon systems acquisition; contract management; and the management of inter-agency contracting. Each of these high-risk areas is addressed in more detail below.

The committee has been aware over the last several years of emerging problems in each of these areas and has initiated numerous legislative provisions in an effort to direct the Department of

Defense toward more sound acquisition practices. While this legislation has resulted in some improvement to the Department of Defense's acquisition processes, serious deficiencies remain in each of the high risk areas identified by GAO.

The committee believes that continuing problems in these high risk areas are attributable, in significant part, to inadequate human capital planning and continuing reductions in the defense acquisition workforce. While it was reasonable to reduce the size of the workforce after the enactment of acquisition reform measures in the mid-1990's, these reductions continued even after the procurement holiday of the 1990's came to an end and even after the global war on terrorism brought record levels of procurement expenditures. Moreover, the Department of Defense made these cuts in a haphazard way, without giving consideration to the recruitment, training, and career-building needed to ensure the ongoing vitality of our acquisition organizations.

At the same time, emerging government requirements have brought forward new challenges such as the acquisition of "systems of systems"; the coordination of joint service and multinational acquisition programs such as the Joint Strike Fighter; the management of complex software acquisitions; the negotiation of commercial pricing agreements without access to traditional cost or pricing data; the development of new performance-based service contracts; the oversight of huge time- and-materials contracts; and the management of public-private competitions. Rather than developing new skills and new resources to address these new challenges, the Department of Defense tried to address them with existing resources using an already undermanned legacy acquisition workforce accustomed to staffing traditional defense procurements in the 1980's and early 1990's.

GAO has reported that strategic human capital management remains a high risk area in the federal government because of agencies' "long-standing lack of a consistent strategic approach to marshaling, managing, and maintaining the human capital needed to maximize government performance and ensure its accountability." This problem is particularly acute in the defense acquisition workforce. The Under Secretary of Defense for Acquisition, Technology and Logistics explained at an April 13, 2005, hearing before the Subcommittee on Readiness and Management Support of the Committee on Armed Services the following:

I believe we are at the point where any further reductions [in the defense acquisition workforce] will adversely impact our ability to successfully execute a growing workload. The numbers are startling. The Defense acquisition workforce has been downsized by roughly half since 1990 while the contract dollars have roughly doubled during the same period. * * *

The Global War on Terrorism and increasing Defense budget places greater demands on acquisition workers ability to support the warfighter. * * * We need to continue to renew and restore the defense acquisition workforce. We need to ensure that we have the right people in the jobs to perform the functions required to support our warfighters. Now more than ever, I believe we need to in-

crease the size of the acquisition workforce to handle the growing workload, especially as retirements increase in the coming years.

In this title, section 832 would address the problems in the defense acquisition workforce by: (1) giving the Secretary of Defense the authority to realign positions in the acquisition workforce to reinvest in higher priority acquisition positions; (2) increasing the overall size of the acquisition workforce by 15 percent; and (3) requiring the Secretary to conduct a strategic assessment and develop a human resources strategic plan for the acquisition workforce.

Department of Defense Weapon Systems Acquisition.

Twenty years ago, the President's Blue Ribbon Commission on Defense Management (commonly known as the Packard Commission) ushered in an era of acquisition reform with its finding that the Department of Defense's "weapon systems take too long and cost too much to produce." The Packard Commission attributed this problem in large part to unrealistic budgeting, "chronic instability" in funding, overstated requirements, a dilution of accountability for results, duplication of programs, and inadequate testing.

Many of the recommendations of the Packard Commission report have been implemented by Congress and the executive branch. These include the creation of the position of the Under Secretary of Defense for Acquisition, Technology and Logistics; the flattening of the organizational structure for acquisition programs; enhanced developmental and operational testing; utilization of multiyear procurement authority; use of performance requirements in lieu of detailed military specifications; and greater use of commercial items. Congress significantly streamlined the acquisition laws in the 1990s and successive administrations have endeavored to eliminate unneeded federal and Department of Defense acquisition rules and regulations.

Despite these changes, however, nearly 20 years after the release of the Packard Commission report and the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 (Public Law 99-433), major weapon systems programs still cost too much and take too long to field.

Why is it that after all of the "acquisition reforms" of the past two decades, the Department of Defense has still not been able to fix the underlying problems with major weapon system acquisition that the Packard Commission identified? The committee believes that one answer can be found in the inability of the Department to address the budget and program stability issues that were identified by the Packard Commission. Funding and requirements instability continue to drive up costs and delays the eventual fielding of new systems. Constant changes in funding and requirements lead to continuous changes in acquisition approaches.

For example, at a recent hearing held by the Subcommittee on Seapower of the Committee on Armed Services, representatives from the shipbuilding industry testified that the acquisition strategy or procurement profile for the *Virginia*-class submarine program had changed 12 times in 10 years. Other Department of Defense programs have similar track records. The committee believes that the same focus needs to be placed on reforming the defense

budget and requirements processes as has been placed on reforming the contracting process over the last 20 years. For this reason, the committee directs the GAO to review the Department of Defense's budget and requirements processes and assess how these processes can better support program stability in major weapon systems acquisition.

The committee is also concerned that problems with organizational structure, shortfalls in acquisition workforce capabilities, and personnel instability continue to undermine the performance of major weapon systems programs. The committee believes that the Department of Defense should give serious consideration to longer tenures for program managers and to taking the steps needed to address shortfalls in the Department of Defense's systems engineering capability and other critical acquisition capabilities. It is questionable whether the Department of Defense can effectively manage major programs as long as senior officials are changing every 18 months and the Department continues to rely almost exclusively on contractors for technical expertise.

While the Congress cannot legislate good long-term management and stewardship of programs, the committee will continue to focus attention on issues that will contribute to better program management. In this regard, the committee requested the GAO in January 2005 to review the authority and responsibilities of program managers and to revisit the issue of program manager tenure. In addition, section 806 in this title would require the Defense Acquisition University to review the acquisition organization of the military departments and defense agencies and report to Congress on any deficiencies in those organizations.

With regard to the acquisition process, the committee believes that the Packard Commission correctly emphasized the need for technological maturity in the acquisition of major weapon systems. Seven years ago, the committee revisited this issue and asked the GAO to begin a review comparing the Department of Defense approach to incorporating technology into new products to approaches successfully applied in the private sector. GAO found that private industry fields new products faster and more successfully because they make sure that new technologies have been proven in the laboratory before they try to incorporate them into new products. As the Comptroller General explained in his April 13, 2005, testimony:

Problems occur because Department of Defense's weapon programs do not capture early on the requisite knowledge that is needed to efficiently and effectively manage program risks. For example, programs move forward with unrealistic program cost and schedule estimates, lack clearly defined and stable requirements, use immature technologies in launching product development, and fail to solidify design and manufacturing processes at appropriate junctures in development.

Over the past several years, the committee has enacted the following legislative initiatives designed to address these problems.

- Section 804 of the National Defense Authorization Act for Fiscal Year 2002 (Public Law 107-107) required the Secretary of Defense to report to the congressional defense committees

any time the Department decides to incorporate into a major weapon system a technology that is not yet mature.

- Sections 802 and 803 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 (Public Law 107–314) authorized the Department of Defense to take advantage of “spiral” development and incremental acquisition techniques, which enable the Department to acquire new systems in phases, as the technology matures.

- Section 804 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 and section 801 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108–375) required the Department of Defense to focus management attention on problems in the development and acquisition of software, which have frequently resulted in cost overruns and schedule delays in the acquisition of major weapon systems.

The committee is also concerned that the Department of Defense has sometimes tried to address acquisition challenges through the use of contracting approaches that are not appropriate to major weapon systems rather than tackle difficult budgetary, requirements, organizational, and personnel issues. For example, a recent series of hearings held by the Subcommittee on AirLand of the Committee on Armed Services have highlighted continuing problems resulting from so called “commercial item strategies” used by the Department of Defense to acquire major weapon systems. While the Department has been able to reduce administrative overhead, commercial item strategies have required foregoing important provisions designed for the protection of the taxpayer in the acquisition of major weapon systems, including the Truth in Negotiations Act (TINA) (10 U.S.C. 2306a) and the Cost Accounting Standards (CAS). Waiving these provisions limits the government’s insight into contractor cost and performance, while doing nothing to overcome the programmatic and technical challenges faced in developing major systems.

Reviews by GAO and the Department of Defense Inspector General have found that the Department of Defense has frequently waived TINA and CAS requirements without a valid legal basis and has failed to conduct adequate price analysis to support price reasonableness in cases where these requirements are waived. In the case of the proposed Air Force tanker lease, the result was a heightened risk of fraud and abuse, which would have significantly increased costs to the taxpayer, had the committee not disapproved the lease proposal. As a result, the Department has recently decided to restructure two other major defense acquisition programs—the Air Force’s C130J aircraft program and the Army’s Future Combat Systems program—to avoid similar risks.

Over the past several years, the committee has enacted the following legislative initiatives designed to address such problems.

- Sections 803 and 808 of the Strom Thurmond National Defense Authorization Act for Fiscal Year 1999 (Public Law 105–261) tightened the requirements for commercial pricing of defense items.

- Section 803 of the Floyd D. Spence National Defense Authorization Act for Fiscal Year 2001 (Public Law 106–398) lim-

ited the use of so called “other transactions” to projects in which either: (1) at least one nontraditional contractor is participating to significant extent; or (2) the contractor agrees to bear at least one-third of the cost of the project.

- Section 817 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 limited the circumstances in which the TINA could be waived and required the Department of Defense to report to Congress on all TINA and CAS waivers granted for major acquisition programs.

- Section 818 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 clarified the applicability of TINA to modifications of commercial items that cost in excess of \$500,000 and 5 percent of the value of the contract.

In this title, sections 844 and 804 would build on this record by: (1) prohibiting “other transactions” in excess of \$100.0 million and ensuring that the Procurement Integrity Act (41 U.S.C. 423) applies to all such transactions; and (2) requiring a specific authorization for the purchase of major weapon systems under procedures established for the procurement of commercial items.

Department of Defense Contract Management. Over the last 15 years, the Department of Defense has dramatically increased its reliance on contractor-provided information technology and management support services. By some estimates, the Department now spends more on the acquisition of services than it does on the acquisition of products, including major weapon systems.

The Department’s acquisition structure and organization has not kept pace with this dramatic change in the expenditure of funds. Despite critical reports by GAO and the Department of Defense Inspector General, the Department still has not developed a centralized management structure for the acquisition of services, still has not conducted a comprehensive spending analysis of its services contracts, and still has not provided its acquisition professionals with the training and guidance needed to manage the Department’s service contracts. Rather, the award of services contracts remains dispersed throughout the Department with little management oversight.

As a result, the Department of Defense has yet to make effective use of critical tools, such as performance-based service contracting (PBSC) and competitive awards under multiple-award task order contracts, to ensure that funds are expended in a cost-effective manner. For example, in July 2004, GAO found that Department of Defense personnel waived competition requirements for nearly half of the task orders reviewed. In March 2005, the Comptroller General reported that the Department of Defense failed to conduct adequate oversight for 26 of 90 contracts reviewed. Department of Defense managers told GAO that contract oversight is “not always a top priority” and “is not given the same importance as getting the contract awarded.” GAO found that some oversight personnel “believe they do not have enough time in a normal workday to perform surveillance, a factor that may be influenced by declining personnel levels in Department of Defense functional offices responsible” for contract oversight.

Over the past several years, the committee has enacted the following legislative initiatives designed to address this problem.

- Section 804 of the National Defense Authorization Act for Fiscal Year 2000 (Public Law 106–65) required the issuance of government-wide guidance on the appropriate use of task order and delivery order contracts.
- Section 821 of the Floyd D. Spence National Defense Authorization Act for Fiscal Year 2001 established a preference for PBSC and required the enhanced training of Department of Defense acquisition personnel and the establishment of centers of excellence in services contracting.
- Section 801 of the National Defense Authorization Act for Fiscal Year 2002 required the Department to establish a management structure for the procurement of services, a tracking system for services contracts, and an approval requirement for services contracts that do not use PBSC.
- Section 802 of the National Defense Authorization Act for Fiscal Year 2002 required the Department to achieve savings in its services contracts through the use of spending analyses, PBSC, and competitive award of task orders.
- Section 803 of the National Defense Authorization Act for Fiscal Year 2002 strengthened competition requirements for purchases of services through multiple award task order contracts.
- Section 805 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 established performance goals for the Department of Defense's use of PBSC and competitive task orders in its services contracts.

Section 802 of this title would build on this record by requiring each of the military departments to establish a Contract Support Acquisition Center to act as the executive agent for the acquisition of contract services for the military department. An additional Center would be established to act as a clearinghouse for the acquisition of contract services by the Office of the Secretary of Defense and the defense agencies.

Management of Interagency Contracting. The last decade has seen a proliferation of new types of government-wide contracts and multi-agency contracts. According to GAO, the GSA alone has seen a nearly tenfold increase in interagency contract sales since 1992, pushing its total sales up to \$32 billion in fiscal year 2004. Other agencies, such as the Department of the Treasury, the Department of Interior, and the National Institutes of Health, also sponsor interagency contracts worth billions of dollars a year. The Department of Defense is by far the largest ordering agency under these contracts, accounting for 85 percent of the dollars awarded under one of the largest GSA programs.

These contracts, which permit officials of one agency to make purchases under contracts entered by other agencies, have provided federal agencies rapid access to high-tech commercial products and related services. However, these contracts have created a chaotic marketplace in which federal agencies are being offered similar products under a wide array of contracts, without any easy way of comparing between the products. At the same time, the Department of Defense does not have an adequate system to track such basic information as who is using these contracts, what they are buying, and how much they are paying.

In too many cases, when one agency uses a contract entered by another agency, it appears that neither agency takes responsibility for making sure that procurement rules are followed and good management sense is applied. As a result, the Department of Defense Inspector General, the GSA Inspector General, and others have identified a long series of problems with inter-agency contracts, including lack of acquisition planning, inadequate competition, excessive use of time and materials contracts, improper use of expired funds, inappropriate expenditures, and failure to monitor contractor performance.

In the past several years, the committee has enacted the following legislative initiatives designed to address these problems.

- Section 814 of the Strom Thurmond National Defense Authorization Act for Fiscal Year 1999 required approval by a contracting officer (or other official specifically designated in regulations) for all Department of Defense purchases under task order contracts of other federal agencies.
- Section 804 of the National Defense Authorization Act for Fiscal Year 2000 required the issuance of government-wide guidance on the appropriate use of government-wide contracts and an assessment of the ordering and program practices followed by federal agencies in using GSA contracts.
- Section 824 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 required an assessment of Department of Defense purchases of products and services through contracts entered by other federal agencies, including the costs and benefits of such purchases.
- Section 802 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 required a joint review by the Department of Defense Inspector General and the GSA Inspector General of the procedures in place to ensure compliance with applicable requirements of law and regulation in Department of Defense purchases through the GSA client support centers.
- Section 854 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 required the Department of Defense to establish a process for review and approval of all procurements in excess of \$100,000 through contracts entered by other federal agencies.

In this title, sections 801 and 805 would build on this record by requiring that: (1) the Department of Defense Inspector General conduct joint reviews with the Inspector Generals of other relevant agencies of all major interagency contracts used by the Department of Defense, to ensure that appropriate procedures are in place and to ensure compliance with applicable requirements of law and regulation; and (2) the secretary of each military department review and report on service surcharges imposed on Department of Defense purchases by other Department of Defense agencies.

Subtitle A—Acquisition Policy and Management

Internal controls for procurements on behalf of the Department of Defense (sec. 801)

The committee recommends a provision that would require the Department of Defense Inspector General, in consultation with applicable Inspector's General of nondefense agencies, to determine whether the policies, procedures, and internal controls of nondefense agencies for purchases on behalf of the Department of Defense are adequate to ensure compliance with defense procurement requirements of law and regulation. The provision would allow the Department to continue contracting after March 15, 2006, with any nondefense agency that is making significant progress toward implementing effective policies, procedures, and internal controls. The provision would prohibit contracting with nondefense agencies after March 15, 2007, if a required second Inspector General review determined that the nondefense agency was not compliant with defense procurement requirements. The provision would also authorize the Under Secretary of Defense for Acquisition, Technology and Logistics to continue contracting through a nondefense agency that has failed to implement appropriate policies, procedures, and internal controls, if he determines that it is necessary to do so in the interest of the Department.

Contract Support Acquisition Centers (sec. 802)

The committee recommends a provision that would require the secretary of each military department to establish a Contract Support Acquisition Center to act as the executive agent for the acquisition of contract services for that military department. The Secretary of Defense would be required to establish an additional Acquisition Center within the Defense Logistics Agency to act as the executive agent for the acquisition of contract services by the defense agencies.

The committee notes that the budget request includes a reduction of \$2.0 billion in funds available for contract support in fiscal year 2006 and a total planned reduction of \$12.0 billion across the Future Years Defense Program. The committee believes that the Department of Defense should be able to achieve a significant portion of these savings through the improved use of contract management tools, without having to cut programs or reduce needed services.

In particular, section 802 of the National Defense Authorization Act for Fiscal Year 2002 (Public Law 107–107), as amended, establishes an objective for the Department of Defense to achieve efficiencies in procurements of services through the increased use of: (1) performance-based service contracting; (2) competitive procedures for the award of task orders and contracts; and (3) program review, spending analyses, and improved management of services contracts. Similar steps have enabled private sector companies to achieve considerable savings.

Unfortunately, the goals established in section 802 for competition in services contracting and the use of performance-based services contracting have not been met. Moreover, it appears that the Department has yet to undertake the comprehensive program re-

view, spending analyses, and improved management of services contracts envisioned by section 802. The committee notes that a number of civilian agencies (including the Internal Revenue Service, the Department of Agriculture and the U.S. Postal Service) report that they have achieved significant savings through the use of spending analyses and strategic sourcing decisions.

The committee believes that the Department of Defense has been unable to achieve comparable savings, in part, because the decentralized nature of the Department of Defense's services contracting and the absence of any organization dedicated to the acquisition of contract support hamper efforts to perform spending analyses, make strategic sourcing decisions, and institute comprehensive management improvements. The provision would address this problem by creating an organizational hub for the acquisition of contract support services by the military departments and defense agencies.

The provision would also require the Contract Support Acquisition Centers to develop and maintain policies, procedures, and best practices guidelines for contract tracking and oversight. The committee notes that the Department of Defense is currently in the process of developing a business enterprise architecture and transition plan to guide the modernization of its business systems. The committee expects the business systems developed by the Department of Defense to have the capability of tracking basic information about interagency transactions, including the number and dollar value of transactions under each interagency contract vehicle, the status of open transactions, the status of funds under interagency transactions (including appropriation type; appropriation year; and fund balance received, obligated, expended, and available), and the amount of any funds returned or to be returned to the Department of Defense or to the Department of Treasury due to the completion or modification of contracts or the expiration of funds.

Authority to enter into acquisition and cross-servicing agreements with regional organizations of which the United States is not a member (sec. 803)

The committee recommends a provision that would permit the Secretary of Defense to enter into acquisition and cross-servicing agreements (ACSA) with regional international organizations of which the United States is not a member. Under current law, the Secretary may enter into ACSAs only with regional organizations of which the United States is a member.

Acquisition agreements and cross-servicing agreements permit the U.S. Armed Forces to obtain specified logistic support from, and to provide similar support to, the other party to the agreement on a reimbursable basis. Originally designed for and limited to North Atlantic Treaty Organization (NATO) nations and organizations, the authority was expanded in 1994 to include certain non-NATO nations and regional organizations of which the United States is a member.

The Department of Defense has requested the expansion of this authority to be used in cases similar to the 2003 events in Liberia. At that time, the U.S. Joint Task Force Liberia was deployed, but

peacekeeping forces were provided by the Economic Community of West African States (ECOWAS)— a regional organization of which the United States is not a member. If the United States were permitted to negotiate an ACSA with ECOWAS, the United States could have furnished essential logistic support. Instead, other, less efficient mechanisms had to be worked out in order to support African peacekeeping forces in Liberia.

Requirement for authorization for procurement of major weapon systems as commercial items (sec. 804)

The committee recommends a provision that would prohibit the purchase of a major weapon system as a commercial item unless such purchase is specifically authorized by Congress.

A recent series of hearings held by the Subcommittee on AirLand of the Committee on Armed Services has highlighted continuing problems resulting from “commercial item strategies” pursued by the Department of Defense over the last decade. Under this approach, the Department has attempted to acquire major weapon systems under streamlined procedures intended for the purchase of commercial items. Such streamlined procedures do not require application of the Truth in Negotiations Act, the Cost Accounting Standards, and other requirements that are otherwise applicable to the acquisition of major weapon systems.

The provision would ensure that acquisition procedures authorized for the acquisition of commercial items are used for true commercial items and not for the purchase of major weapon systems.

Report on service surcharges for purchases made for military departments through other Department of Defense agencies (sec. 805)

The committee recommends a provision that would require the Department of Defense to review and report on service charges imposed on one component of the Department for purchases made through another component of the Department.

Section 854(d) of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108–375) required an annual report on service charges imposed on Department purchases by other federal agencies. The provision recommended by the committee would extend this requirement to service charges internal to the Department.

Review of defense acquisition structures (sec. 806)

The committee recommends a provision that would require the Defense Acquisition University, acting under the direction of the Under Secretary of Defense for Acquisition, Technology and Logistics, to review and report on the capabilities and shortfalls of the acquisition organizations of the military departments and defense agencies. The review would place particular emphasis on steps needed to improve joint acquisition and acquisition outcomes.

The review would specifically identify and make recommendations for addressing any gaps, shortfalls, or inadequacies in current acquisition organizations that could make it more difficult for these organizations to provide high-quality systems to the warfighter on a timely and cost-effective basis. The committee is particularly con-

cerned that the military departments appear to have divested much of their system engineering capability over the last 15 years. In addition, the committee is concerned that the Department of Defense has become excessively reliant upon contracts awarded by other agencies for the acquisition of services and information technology, and does not appear to have developed the appropriate structures and competencies needed to adequately handle these responsibilities.

At an April 14, 2004, hearing of the Subcommittee on AirLand of the Committee on Armed Services, the Acting Secretary of the Air Force testified that his department had gone too far in downsizing its acquisition organization and had removed critical checks and balances from the acquisition process. These problems are not unique to the Air Force. Because the problems in the Air Force acquisition organization appear to be the most severe, the provision would require an interim report on the Air Force acquisition organization not later than one year after the date of enactment of this Act.

Subtitle B—Defense Industrial Base Matters

Clarification of exception from Buy American requirements for procurement of perishable food for establishments outside the United States (sec. 811)

The committee recommends a provision that would clarify that the exception from Buy American requirements for procurement of perishable food for establishments outside the United States applies to procurements for an overseas defense facility, even if the procurements are not conducted by such a facility. This clarification is necessary because many food purchases for defense facilities are now made by prime vendors and other contractors, rather than being made by the facilities themselves.

Conditional waiver of domestic source or content requirements for certain countries with reciprocal procurement agreements with the United States (sec. 812)

The committee recommends a provision that would authorize the Secretary of Defense to annually determine whether a foreign country with a reciprocal defense procurement Memorandum of Understanding or agreement with the United States has qualitatively or quantitatively increased defense exports to China. If it is determined that no qualitative or quantitative increase has occurred in the previous year, the Secretary may on an annual basis waive the application of statutory domestic source requirements and domestic content requirements, provided that: (1) the application of the requirements would impede the reciprocal procurement of defense items under a Memorandum of Understanding between the United States and another country; and (2) the other country does not discriminate against items produced in the United States to a greater degree than the United States discriminates against items produced in that country. The proposed waiver is identical to the standard previously adopted by the Congress for products covered by the domestic content restrictions in section 2534 of title 10, United States Code.

Consistency with United States obligations under trade agreements (sec. 813)

The committee recommends a provision that would require that no provision of this Act, or any amendment made by this Act, shall apply if the Secretary of Defense, in consultation with the Secretary of Commerce, the U.S. Trade Representative, and the Secretary of State, determines that the application of the provision would be inconsistent with international trade agreements of the United States.

Identification of areas of research and development effort for purposes of the Small Business Innovative Research program (sec. 814)

The committee recommends a provision that would require the Secretary of Defense to use criteria and procedures, updated at least every four years, in the most current version of the three primary science and technology strategic plans to identify areas of research and development for the Small Business Innovative Research (SBIR) program. The three strategic plans are: the Joint Warfighting Science and Technology Plan, the Defense Technology Area Plan, and the Basic Research Plan. The provision would ensure participation in the SBIR research topic selection process by the immediate customers of defense research, the program managers, and program executive officers.

The provision would also require the secretaries of the military departments to identify successful SBIR Phase II programs for acceleration into Phase III and rapid transition into programs of record. All programs identified for rapid transition would first require a written certification from the Secretary of Defense that successful completion of the transition is expected to meet high priority military requirements.

The committee notes the importance of ensuring transition of successful SBIR projects into Department of Defense acquisition programs. Acquisition program managers across the Department of Defense should be encouraged to utilize the SBIR program in their planning, budgeting, and requirements process. The Department of Defense should take the steps necessary to improve data collection on transition of SBIR projects into Department of Defense acquisition programs, either directly or through integration into systems by the prime contractors. The committee believes the Department of Defense should encourage the National Research Council's ongoing study of the SBIR program to address the issue of technology transition and, to the extent possible, collect data on the rates of transition success for SBIR Phase II projects.

Subtitle C—Defense Contractor Matters

Requirements for defense contractors relating to certain former Department of Defense officials (sec. 821)

The committee recommends a provision that would require companies that receive defense contracts in excess of \$10.0 million (other than contracts for the procurement of commercial items) to report to the Department of Defense on an annual basis on former DOD officials who receive compensation from the contractor.

At an April 14, 2005, hearing of the Subcommittee on AirLand of the Senate Committee on Armed Services, the U.S. Attorney for the Eastern District of Virginia testified that it has been difficult for him to identify potential ethics violations by former Department officials who go to work for defense contractors, because the Department's records in this area are inadequate. An April 2005 report of the Government Accountability Office (GAO) also concluded that monitoring of former Department employees who go to work for defense contractors is limited. The report states:

Neither the Defense Contract Management Agency nor the Defense Contract Audit Agency—the agencies responsible for oversight of defense contractor's operations—had assessed the adequacy of contractors' practices of hiring current and former government employees. An independent review of one of DOD's largest contractors found that the company lacked the management controls needed to ensure an effective ethics program. Instead, the review found that the company relied excessively on employees to self-monitor their compliance with post-government employment restrictions. The review concluded that by relying on self-monitoring, the company increased the risk of non-compliance, due to either employees' willful misconduct or failure to understand complex ethics rules.

The provision should provide a more complete set of records for the Department of Defense, the GAO, and others to use in assessing the extent to which former Department employees who go to work for defense contractors are in compliance with applicable ethics requirements.

Review of certain contractor ethics matters (sec. 822)

The committee recommends a provision that would require the Secretary of Defense, in consultation with the Director of the Office of Government Ethics (OGE) and the Administrator for Federal Procurement Policy, to review ethics issues raised by contractor employees performing functions closely associated with inherently governmental functions and other contractor employees performing functions historically performed by government employees in the federal workplace.

On February 8, 2005, the Acting Director of the OGE requested that the Services Acquisition Reform Act (SARA) Advisory Committee conduct an evaluation of "whether contractor employees should be subject to some type of ethics laws, rules or practices designed to prevent conflicts of interest and the appearance of conflicts of interest." The OGE letter explained:

In recent years, executive branch ethics officials—particularly those from Department of Defense agencies and certain civilian agencies—have identified various issues and concerns that are a result of the growing presence of contractors in the Federal workplace. The issues predominantly relate to the fact that, unlike Government employees, contractor personnel are not subject to a comprehensive set of ethics rules, yet they are often performing some of the Government's most sensitive and critical work. This

disparity is true even when contractor personnel are working side-by-side with Government employees in the Federal workplace or on the battlefield, and, for all practical purposes, may appear to the public to be employees. The problem is most likely to occur when contractors perform work that historically was considered a federal function, as well as when contractors perform functions closely associated with inherently governmental functions.

Thus, it has been suggested that current laws, regulations and practices may be inadequate to prevent certain kinds of conflicts and ethics issues on the part of contractors. For example, Government employees are subject to various “post employment” restrictions that prevent them from switching sides and representing clients back to the government on a matter that they worked on in the Government. In contrast, contractor personnel—even those who performed the same or similar work as their Federal counterparts—are not subject to similar restrictions after they complete work on a contract or obtain work with another contractor. In addition, contractor personnel are not uniformly subject to gift rules. For example, a contractor performing an agency’s IT function could accept a free computer at a company-sponsored user conference or meeting, unless such conduct was prohibited by his company’s internal policies.

The committee supports the OGE request that the SARA Advisory Committee should look into these issues. In addition, the committee believes that Congress would benefit from the views of the Secretary, the Director of OGE, and the Administrator for Federal Procurement Policy on these issues. The options listed in the legislation for review by the Secretary are the same options proposed in the OGE letter.

Contract fraud risk assessment (sec. 823)

The committee recommends a provision that would establish a risk assessment team to assess the vulnerability of Department of Defense contracts to fraud, waste, and abuse and require the Secretary of Defense to develop an action plan to address areas of vulnerability identified by the risk assessment team.

Recent contracting scandals in the Department of Defense have lead the U.S. Attorney for the Eastern District of Virginia to establish a Procurement Fraud Working Group to promote early detection and prevention of procurement fraud through the use of law enforcement measures to increase prevention and prosecution of fraud-related cases. The committee strongly supports this effort. However, the committee believes that more proactive measures can be taken by the Department to prevent fraud. A combined approach of active prosecution and proactive Department policies and procedures directed at areas of potential vulnerability should be constructive in deterring improper contracting practices.

Subtitle D—Defense Acquisition Workforce Matters

Availability of funds in Acquisition Workforce Training Fund for defense acquisition workforce improvements (sec. 831)

The committee recommends a provision that would amend section 37 of the Office of Federal Procurement Policy Act (41 U.S.C. section 433) to allow the defense acquisition workforce to benefit from fees collected under inter-agency contracts.

Section 1412 of the National Defense Authorization Act for Fiscal Year 2004 (Public Law 108–136) amended section 37 to establish an Acquisition Workforce Training Fund supporting the training of the acquisition workforce. The Department of Defense was excluded from contributing to, or benefitting from, this fund. The provision would delete this exclusion, enabling the defense acquisition workforce to benefit from the enhanced training opportunities made possible by the fund.

Limitation and reinvestment authority relating to reduction of the defense acquisition and support workforce (sec. 832)

The committee recommends a provision that would require a 15 percent increase in the defense acquisition and support workforce during fiscal years 2006 through 2008. The Secretary of Defense would be given the flexibility under this provision to realign positions in the acquisition workforce to reinvest in higher priority acquisition positions. The provision would also require the Secretary to conduct a strategic assessment and develop a human resources strategic plan for the defense acquisition and support workforce.

Technical amendments relating to defense acquisition workforce improvements (sec. 833)

The committee recommends a provision that would make minor technical changes to the newly revised Defense Acquisition Workforce Improvement Act (DAWIA), chapter 87 of title 10, United States Code, enacted by section 812 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108–375). These technical changes are necessary to correct inaccuracies in numbering.

The committee notes that DAWIA, as amended by section 812, specifies which military positions should be designated as critical acquisition positions, but gives the Secretary of Defense broad discretion to determine which civilian positions should be so designated. The committee expects the Secretary to use this discretion to ensure parallel treatment of military and civilian acquisition officials by designating civilian positions that have a level of responsibility comparable to the military positions that are designated by statute.

Subtitle E—Other Matters**Extension of contract goal for small disadvantaged business and certain institutions of higher education (sec. 841)**

The committee recommends a provision that would extend section 2323 of title 10, United States Code, for three years. Section 2323 establishes a 5 percent goal for Department of Defense contracting with small disadvantaged businesses and certain institutions of higher education.

Codification and modification of limitation on modification of military equipment within five years of retirement or disposal (sec. 842)

The committee recommends a provision that would prohibit annual expenditures greater than \$100,000 to modify an aircraft, weapon, ship, or other item of equipment that will be retired or otherwise disposed of within 5 years after completion of the modification. The secretary of a military department may waive this restriction if the waiver is necessary on the basis of national security, and he so notifies the congressional defense committees in writing. Safety modifications will not require waivers. This provision would codify and modify the requirements of section 8053 of the Department of Defense Appropriations Act for Fiscal Year 1998 (Public Law 105–56) by establishing an annual \$100,000 threshold requirement for congressional notice and departmental waiver.

Clarification of rapid acquisition authority to respond to combat emergencies (sec. 843)

The committee recommends a provision that would amend section 806 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 (Public Law 107–314) to give the Department of Defense greater flexibility to address combat emergencies. In particular, the provision would: (1) give the Secretary of Defense authority to address deficiencies that have resulted in combat casualties, even if they are not “combat capability deficiencies” and even if they have not resulted in fatalities; (2) permit the Secretary to delegate his authority under the section to the Deputy Secretary of Defense; and (3) clarify that the category of statutes and regulations that may be waived if necessary to prevent combat casualties include domestic source or content restrictions that would inhibit or impede the rapid acquisition of needed equipment.

Modification of authority to carry out certain prototype projects (sec. 844)

The committee recommends a provision that would prohibit the Department of Defense from entering into a transaction (other than a contract, cooperative agreement, or grant) under the authority of section 845 of the National Defense Authorization Act for Fiscal Year 2004 (Public Law 108–136, 10 U.S.C. 2371 note) for a prototype project that is expected to cost in excess of \$100.0 million. The provision would require the approval of the senior procurement executive for an agency before this authority may be used to enter into a transaction that is expected to cost in excess of \$20.0 million.

Section 845 was intended to be used for limited prototype projects, particularly those in which the Department seeks to engage nontraditional defense contractors that may be averse to the requirements imposed by a standard Department procurement contract. For this reason, the statement of managers accompanying the Strom Thurmond National Defense Authorization Act for Fiscal Year 1999 (Public Law 105-261) states:

The conferees continue to believe that the section 845 authority should only be used in the exceptional cases where it can be clearly demonstrated that a normal contract or grant will not allow sufficient access to affordable technologies. The conferees are especially concerned that such authority not be used to circumvent the appropriate management controls in the standard acquisition and budgeting process.

Similarly, section 803 of the Floyd D. Spence National Defense Authorization Act for Fiscal Year 2001 (Public Law 106-348) expressly limited the use of section 845 authority to transactions with companies that typically do not do business with the Department and to transactions in which costs are shared between the Department and the contractor.

The committee does not believe that the \$20.9 billion agreement entered between the Army and the Lead Systems Integrator for the Future Combat Systems program was consistent with the language and intent of these provisions. For this reason, the committee supports the Army's decision to restructure its agreement with the Lead Systems Integrator as a traditional procurement contract.

The provision recommended by the committee would ensure that section 845 authority is used as intended in the future for limited prototype projects, not to circumvent the appropriate management controls in the standard acquisition and budgeting process.

Extension of certain authorities on contracting with employers of persons with disabilities (sec. 845)

The committee recommends a provision that would extend for one year section 853 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375). This provision would ensure the continuation and completion of existing contracts (including any options) awarded under the Javits-Wagner-O'Day Act (41 U.S.C. 46 *et seq.*) and the Randolph-Sheppard Act (20 U.S.C. 107 *et seq.*) programs for the operation of military troop dining facilities, military mess halls, and other similar military dining facilities.

Items of Special Interest

Commercial satellite bandwidth

The Government Accountability Office (GAO) issued a report in December 2003, at the request of the Subcommittee on Readiness and Management Support of the Committee on Armed Services, entitled "Satellite Communications: Strategic Approach Needed for DoD's Procurement of Commercial Satellite Bandwidth." Section 803 of the Ronald W. Reagan National Defense Authorization Act

for Fiscal Year 2005 (Public Law 108-375) required the Secretary of Defense to report to Congress on the Department's procurement strategy for commercial communications satellite services, and how the Department will address each of the recommendations contained in the GAO report. It is the committee's understanding that the Department's report will be delivered in June 2005.

The committee directs the GAO to review the Department's report to determine the extent to which the recommendations made by GAO have been addressed by the Department and report to the committee on the results of this assessment within 25 days of the release of the Department's report.

Defense trade data

Defense trade impacts several issues of importance to the Department of Defense, including maintaining a healthy supplier base, protecting critical technologies, ensuring access to a secure supply of defense-related items and services, managing technology transfers, and increasing interoperability with allies. A critical element to guide decision-makers on defense trade is access to comprehensive and reliable data. Due to concerns about the potential inadequacy of defense trade data, the committee directs the Government Accountability Office (GAO) to identify: (1) Defense trade data that is collected and reported by U.S. government agencies; (2) the limitations, if any, of that data; and (3) reasonable conclusions that can be made about current trends in defense trade based on that data.

The committee is also concerned about the adequacy of data on arms sales to China. The European Union's recent proposal to lift its ban on lethal arms sales to China has generated a need for the GAO to update its June 1998 report, "China: Military Imports from the United States and the European Union since the 1989 Embargoes." Accordingly, the committee directs the GAO to report on arms sales to China over the past five years from the United States, European Union member countries, and other major arms exporting countries and determine any quantitative or qualitative trends in these sales.

Department of Defense anti-tamper program

In the Senate Report accompanying S. 1050 (S. Rept. 108-46) to the National Defense Authorization Act for Fiscal Year 2004, the committee asked the Government Accountability Office (GAO) to review the Department of Defense's anti-tamper program, which is designed to protect critical U.S. technologies from risk of exploitation if they are exported, stolen, or lost during combat. The GAO reported to the committee in March 2004 and made several recommendations for the Department to improve its anti-tamper program.

The committee has been informed that the Department has made progress in implementing some of GAO's recommendations but has yet to implement others. Specifically, the Department has made progress in: (1) Developing a tool to help program managers identify critical technologies in their systems; (2) creating a technology database to include anti-tamper technologies and lessons learned; (3) sponsoring training for verification teams; (4) funding an inde-

pendent study on anti-tamper techniques and general effectiveness; and (5) creating more robust verification and validation teams to assist programs with anti-tamper implementation and best practices.

The committee understands that the Department has yet to: (1) Implement a newly drafted policy on anti-tamper; (2) develop a central review mechanism for consistent identification of similar critical technologies across programs; and (3) fully establish a business case that determines whether the current organizational structure and resources are adequate to implement anti-tamper protection and, if not, determine what other actions are needed to mitigate the risk of compromising critical technologies.

The committee directs the GAO to update its March 2004 report to the committee and evaluate the actions the Department has taken to date and pursue any necessary follow-up work on the Department's anti-tamper program.

Industrial base issues

In May 2004, the Department of Defense issued a report entitled: "*Adequacy of U.S. Beryllium Industrial Base to Meet Defense Requirements*", dated May 2004. This report clearly establishes the long-term national security need to ensure a domestic supply of beryllium to meet defense needs. The committee urges the Secretary of Defense to include within future years' budgets a level of funding consistent with the report's findings, which will lead to the development of a cooperative public-private partnership in the domestic beryllium industrial base, to include using funding under the Defense Production Act (50 U.S.C. App. section 2061 *et seq.*), or any other means that the Secretary determines as feasible.

The committee also believes that the Department should review whether Defense Production Act funding should be used for (1) a silicon carbide armor manufacturing initiative and (2) supporting efficient and flexible manufacturing for producing current and future small arms weapons.

Implementation of authority to enter energy savings performance contracts

Section 1090 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375) extended through the end of fiscal year 2006 the authority for the Department of Defense and other federal agencies to enter energy savings performance contracts pursuant to section 802 of the National Energy Policy Act (42 U.S.C. 8287a).

When properly used, energy savings performance contracts enable the Department and other federal agencies to reduce energy and water consumption through infrastructure upgrades, such as new thermal storage systems, chillers, boilers, and lights, with no out-of-pocket cost at all to the government. In some cases, excess savings from energy improvements can even be used to offset other base operating support expenses.

Section 802 of the National Energy Policy Act provides that an energy savings performance contract is a contract which provides for the contractor to implement energy savings measures in federal facilities "in exchange for a share of any energy savings directly re-

sulting from implementation of such measures during the term of the contract.” The statute further provides that aggregate payments to the contractor “may not exceed the amount that the agency would have paid for utilities without an energy savings performance contract.”

In December 2004, the Government Accountability Office (GAO) reported that on six energy savings performance contracts it reviewed (including three contracts entered by the Department of the Navy), aggregate payments to the contractor exceeded energy cost savings during the term of the contract. In each case, the GAO found that the agencies made significant up-front payments to the contractor and then paid the contractor all or virtually all of the savings resulting from the contract. As a result, the total of the up-front payments and the regular payments during the term of the contract exceeded the amount of the savings.

The committee is concerned by the appearance that the Department and other federal agencies may have routinely violated the requirements of section 802 of the National Energy Policy Act. Accordingly, the committee directs the Secretary of Defense to issue guidance to all the Department officials responsible for entering energy savings performance contracts reemphasizing the statutory requirement that the cost of an energy savings performance contract be paid entirely out of the energy savings resulting from the contract.

National technology and industrial base considerations

The committee notes with concern a number of negative trends affecting the ability of the national technology and industrial base to meet the long-term national security challenges facing the United States. Over the past 20 years, the U.S. aerospace industrial base has declined from 75 competing companies to the present “Big Five.” This is mainly a result of consolidations and mergers. More than 700,000 jobs in the aerospace and defense sector have been lost. The average age of defense industry workers is now over 50, while college enrollment in defense and aerospace-related engineering programs continues to decline.

The integration of the commercial and military industrial bases, so called civil-military integration, has not been as successful as many advocates had hoped. While military systems continue to incorporate advanced commercial technology, many commercial systems have often proven difficult to adapt for military uses. Also, military technologies have been slow to develop commercial applications.

The defense industry has found it difficult to use global sales to stabilize defense production. Cumbersome export control processes often overly restrict American companies from selling defense and dual-use products on the international market and discourage international cooperation on new aerospace and defense technologies.

The committee recognizes that private sector manufacturers have a responsibility to investors and shareholders to be profitable and competitive. Industries supporting national defense must compete with other industries in the U.S. economy for investment capital. The Department of Defense should consider reviewing profit poli-

cies to accurately reflect risk and achieve better performance in defense contracting.

The Department of Defense, industry, and the Congress must work together to ensure that the defense industry continues on the path of integration with the commercial sector, remains globally competitive, and attracts new generations of scientists, engineers, and other skilled workers. To that end, the committee urges the Department to work with industry to: (1) Maintain stable federal funding for core production capabilities and the critical Research Development Test and Evaluation infrastructure supporting defense programs; (2) maintain a stable annual science and technology budget at the Department consistent with the 3 percent goal established in legislation, to develop innovative technologies designed to meet future national security threats; (3) work with universities and the defense manufacturing community to develop a plan to train and build a skilled aerospace and defense workforce; (4) provide appropriate incentives to encourage the participation of small businesses and independent entrepreneurs from nondefense sectors in the Defense Industrial Base; (5) eliminate obstacles in the export licensing process that restrict international sales of defense and dual-use products without providing a corresponding national security benefit; (6) facilitate and encourage international joint programs with allies; and (7) promote greater interoperability among both defense and commercial defense systems, domestically and internationally.

TITLE IX—DEPARTMENT OF DEFENSE ORGANIZATION AND MANAGEMENT

Subtitle A—Duties and Functions of Department of Defense Officers and Organizations

Directors of small business programs (sec. 901)

The committee recommends a provision that would change the title of the Department of Defense's "Office of Small and Disadvantaged Business Utilization" to the "Office of Small Business Programs" to more clearly represent the office's span of authority. The name would not reflect a change in emphasis or support for disadvantaged businesses, but rather would clarify that the Office of Small Business Programs has the full range of authority over many other small business programs that presently are not reflected in the office's title. The new title would capture the overarching nature of the program, which encompasses the small disadvantaged business, service-disabled veteran-owned small business, qualified historically underutilized business zone small business, women-owned small business, and the very small business programs.

Executive agent for acquisition of capabilities to defend the homeland against missiles and other low-altitude air- craft (sec. 902)

The committee recommends a provision that would direct the Secretary of Defense to establish an executive agent in the Department of Defense to manage the acquisition of capabilities necessary to defend the homeland against cruise missiles, unmanned aerial vehicles, and other low-altitude air threats. The provision would require the executive agent to coordinate with the Missile Defense Agency, the Joint Theater Air and Missile Defense Organization, U.S. Northern Command, U.S. Strategic Command, and other appropriate U.S. government agencies to ensure unity of effort and to avoid unnecessary duplication. Additionally, the Secretary is required to submit to the congressional defense committees, no later than 180 days after enactment of this Act, a plan for the defense of the United States against cruise missiles, unmanned aerial vehicles, and other low-altitude air threats. The Secretary shall coordinate this plan with other Department plans for the defense of the homeland against short- to medium-range ballistic missiles.

The committee has been concerned about the increasing threat posed by cruise missiles, unmanned aerial vehicles, and other low-altitude threats against the United States. Accordingly, Congress directed the Secretary, in the National Defense Authorization Act for Fiscal Year 2004 (Public Law 108-136), to provide a report on the U.S. military's ability to address these threats. The report entitled "Cruise Missile Defense," submitted to the Congress in September 2004, addressed the challenges cruise missiles and other

low-altitude threats pose to the air defense of the United States and noted that a comprehensive interagency approach was necessary to address the problem. The report further noted that while technology demonstration programs were underway in the Department for homeland airspace surveillance and defense, it would be necessary to establish acquisition programs with appropriate funding to acquire capabilities that were successfully demonstrated.

The committee notes that it is the mission of NORAD, a component of U.S. Northern Command, to defend the United States against cruise missiles and other air threats. NORAD is currently developing a document under the U.S. Joint Staff's Joint Capabilities Integration and Development System to define the family-of-systems capabilities needed to defend the United States against low-altitude air threats. The committee understands, however, that while U.S. NORTHCOM is responsible for the defense of the homeland against these threats, it does not have the authority or funding to acquire needed capabilities.

To enhance efforts to protect the homeland from cruise missiles, unmanned aerial vehicles, and other low-altitude air threats, the committee believes that there should be a single official within the Department responsible for coordinating, integrating, funding, and acquiring the surveillance and interceptor programs necessary for a cohesive defense of the homeland against these threats, and that there should be a plan for such defense. Additionally, these efforts to defend against low-altitude air threats should be coordinated with ongoing Missile Defense Agency efforts to address the short-to medium-range ballistic missile threat to the United States.

Subtitle B—Space Activities

Advisory committee on Department of Defense requirements for space control (Sec. 911)

The committee recommends a provision that would require the Secretary of Defense to establish an advisory committee on the current and future space control requirements of the United States, including the means of meeting those requirements.

According to U.S. "National Space Policy," last promulgated in September 1996, the United States will develop, operate, and maintain space control capabilities to ensure freedom of action in space and, if directed, deny such freedom of action to adversaries. In March 2005, senior administration officials testified before the Subcommittee on Strategic Forces of the Committee on Armed Services that this remains official U.S. policy. The space control mission area includes three important components: (1) space situational awareness; (2) defensive counterspace operations; and (3) offensive counterspace operations.

The committee recognizes the growing reliance of the United States on space operations for its security. This reliance creates a potential vulnerability should adversaries develop capabilities for interdicting or destroying U.S. space assets or ground support infrastructure. The committee is concerned that given the potential threats to U.S. and allied space operations, the Department of Defense may not be allocating sufficient funding for space control when compared with other military space mission areas. The com-

mittee therefore believes an advisory committee of experts can provide a valuable assessment of current and future space control requirements, to include the adequacy of means for meeting those requirements.

Subtitle C—Other Matters

Acceptance of gifts and donations for Department of Defense regional centers for security studies (sec. 921)

The committee recommends a provision that would provide authority for the Secretary of Defense to accept gifts and donations on behalf of each of the Department of Defense regional centers for security studies. The provision would define the sources from which gifts and donations may be accepted, and criteria for acceptance of such gifts and donations. The provision would also establish an account on the books of the Treasury to be known as the Regional Centers for Security Studies Account into which monetary donations would be credited and made available for expenditure to defray the costs, or enhance the operation, of the regional centers.

This provision would consolidate a set of laws into one provision that would provide uniform and consistent authority for the Secretary to accept gifts and donations on behalf of each of the Department regional centers for security studies.

Operational files of the Defense Intelligence Agency (sec. 922)

The committee recommends a provision that would authorize the Director of the Defense Intelligence Agency (DIA), in coordination with the Director of National Intelligence, to exempt specifically defined operational files of certain elements of the DIA from disclosure under the Freedom of Information Act (5 U.S.C. 552). Judicial review would be available for allegations of improper withholding of material, subject to certain protections for classified material. All exempted operational files would be subject to a 10-year review to determine whether the protected files should be removed from the exempted operational files. This provision would provide DIA with protection of its most sensitive operational files. The committee notes that such protections are currently authorized for the Central Intelligence Agency, the National Security Agency, the National Reconnaissance Office, and the National Geospatial Intelligence Agency, under title VII of the National Security Act of 1947 (50 U.S.C. 431 et. seq.).

Prohibition on implementation of certain orders and guidance on functions and duties of the General Counsel and the Judge Advocate General of the Air Force (sec. 923)

The committee recommends a provision that would prohibit the obligation or expenditure of funds authorized to be appropriated by the National Defense Authorization Act for Fiscal Year 2006 to implement or enforce either: (1) the order of the Secretary of the Air Force, dated May 15, 2003, and entitled “Functions and Duties of the General Counsel and the Judge Advocate General;” or (2) any internal operating instruction or memorandum issued by the Gen-

eral Counsel of the Department of the Air Force in reliance upon the Secretary's May 15, 2003, order.

Since the enactment of the Goldwater-Nichols Department of Defense Reorganization Act of 1986 (Public Law 99-433), the Congress has strongly supported the existence of separate military and civilian staffs in the area of legal services and elsewhere. In section 574 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375), the Congress enacted explicit protection for the ability of the Judge Advocates General to give independent legal advice to the service secretaries and service chiefs, and for the ability of judge advocates to give such advice to commanders. In the statement of managers accompanying that Act, the conferees directed the Secretary of the Air Force to rescind the above order, which violated the principles of the Goldwater-Nichols Act by elevating the General Counsel to a position of supremacy over Air Force legal services. The conferees further directed the General Counsel to rescind any operating instructions or memoranda issued in reliance upon the Secretary's order. Neither of these has been done. Accordingly, the committee recommends the inclusion of the present provision.

TITLE X—GENERAL PROVISIONS

Subtitle A—Financial Matters

Transfer authority (sec. 1001)

The committee recommends a provision that would provide for the transfer of funds authorized in division A of this Act for unforeseen higher priority needs in accordance with normal reprogramming procedures.

Incorporation of classified annex (sec. 1002)

The committee recommends a provision that would incorporate the classified annex prepared by the Committee on Armed Services into the National Defense Authorization Act for Fiscal Year 2006.

United States contribution to NATO common-funded budgets in fiscal year 2006 (sec. 1003)

The resolution of ratification for the Protocols to the North Atlantic Treaty of 1949 on the Accession of Poland, Hungary, and the Czech Republic contained a provision (section 3(2)(c)(ii)) requiring a specific authorization for U.S. payments to the common-funded budgets of the North Atlantic Treaty Organization (NATO) for each fiscal year, beginning in fiscal year 1999, in which U.S. payments exceed the fiscal year 1998 total. The committee recommends a provision to authorize the U.S. contribution to NATO common-funded budgets for fiscal year 2006, including the use of unexpended balances from prior years.

Reduction in certain authorizations due to savings relating to lower inflation (sec. 1004)

The Department of Defense assumed an inflation rate of 2.1 percent in its fiscal year 2006 budget submission. However, according to the Senate Budget Committee's report (S.Prt 109–18, p. 10) accompanying the Senate Concurrent Resolution of the Budget for FY 2006 (S.Con.Res. 18), the Congressional Budget Office's estimate of inflation is 0.5 percentage points lower than the administration's estimate for 2006. The savings resulting from lower-than-expected inflation for fiscal year 2006 is \$1.3 billion.

Authorization of supplemental appropriations for fiscal year 2005 (sec. 1005)

This provision would authorize the supplemental appropriations for fiscal year 2005 enacted in the Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Tsunami Relief, 2005 (Public Law 109–13, as adopted by the House of Representatives on May 5, 2005 and the Senate on May 10, 2005).

Increase in fiscal year 2005 transfer authority (sec. 1006)

The committee recommends a provision that would increase fiscal year 2005 transfer authority from \$3.5 billion to \$6.185 billion for transfers among accounts in division A of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108-375) for unforeseen higher priority needs in accordance with normal reprogramming procedures.

Monthly disbursement to States of state income tax voluntarily withheld from retired or retained pay (sec. 1007)

The committee recommends a provision that would amend section 1045(a) of title 10, United States Code, to authorize the service secretaries, pursuant to an agreement with any State, to disburse state income tax on a monthly, vice quarterly, basis that is collected from the monthly retired or retainer pay of any service member or former service member entitled to such pay who voluntarily requests such withholding.

Reestablishment of limitation on payment of facilities charges assessed by Department of State (sec. 1008)

The committee recommends a provision that would permit the Secretary of Defense to offset, on an annual basis, any fees charged to the Department of Defense by the Department of State for the maintenance, upgrade, or construction of U.S. diplomatic facilities by the total amount of the unreimbursed costs incurred by the Department of Defense for providing goods and services to the Department of State during that year.

While the committee recognizes the need to upgrade and construct new diplomatic facilities, the committee opposes the use of the capital cost sharing program as a means of accomplishing this goal. The capital cost sharing program does not take into account the substantial amount of goods and services that the Department of Defense provides to the Department of State at no cost. The committee urges the administration to request sufficient funds in future year budget requests to provide for the costs of upgrading or constructing U.S. diplomatic facilities.

Subtitle B—Naval Vessels and Shipyards**Transfer of battleship (sec. 1021)**

The committee recommends a provision that would authorize the Secretary of the Navy to strike the U.S.S. *Wisconsin* from the Naval Register, and transfer it by gift or otherwise, provided that the transferee locate the ship in the Commonwealth of Virginia. The provision would also stipulate that any costs associated with the transfer will be borne by the transferee, notwithstanding section 7306b(d) of title 10, United States Code.

The committee notes that the U.S.S. *Wisconsin* is currently berthed in the Commonwealth of Virginia, where it is open to the general public for tours. The committee expects the Secretary to ensure that any group who accepts transfer will use it to promote the traditions of the Navy.

Conveyance of Navy Drydock, Jacksonville, Florida (sec. 1022)

The committee recommends a provision that would authorize the Secretary of the Navy to convey all right, title, and interest of the United States in and to Navy Drydock No. AFDM-7 (the Sustain) to Atlantic Marine Property Holding Company, located in Duval County, Florida.

The provision would include the condition that the drydock remain at the facilities of the Atlantic Marine Property Holding Company until September 30, 2010. The provision would also require the Atlantic Marine Property Holding Company to pay an amount determined by the Secretary to be the fair market value of the drydock. The provision would also authorize the Secretary to require any additional terms and conditions determined appropriate to protect the interests of the United States.

Subtitle C—Counterdrug Matters

Use of unmanned aerial vehicles for United States border reconnaissance (sec. 1031)

The committee recommends a provision that would amend chapter 18 of title 10, United States Code, to authorize the Secretary of Defense to use Department of Defense personnel and equipment to conduct aerial reconnaissance within the area of responsibility of the U.S. Northern Command (NORTHCOM) with unmanned aerial vehicles (UAVs) in order to conduct certain operations. These operations would be to detect, monitor, and communicate on the movement of air and sea traffic along the U.S. border and on surface traffic that is outside of the geographic boundary of the United States or up to 25 miles inside the border of the United States, if that traffic was detected outside the boundary of the United States.

The provision would specify that the purposes of this aerial reconnaissance would be to detect and monitor suspicious air, sea, and surface traffic; and to communicate information on such traffic to appropriate federal, state, and local law enforcement officials. The provision would make funds available to the Department of Defense for counterdrug activities available for the other activities authorized by this provision.

The provision would stipulate that any limitations and restrictions under chapter 18, title 10, United States Code, would apply with respect to the use of personnel, equipment, and facilities. The provision would define the term “suspicious air, sea, and surface traffic” as that which is suspected of illegal activities, including activities that would constitute a violation of any provision of law in section 374(b)(4)(A) of title 10, United States Code. The provision would define state law enforcement officials as including authorized members of the National Guard, operating under authority of title 32, United States Code. The provision would require an annual report from the Secretary of Defense to the congressional defense committees that would describe the UAV operations conducted under the authority of this provision for the previous year.

The committee understands that the Department of Homeland Security has initiated its own efforts to use UAVs to patrol the borders of the United States. The authorization for the Department of

Defense to engage in similar activities should complement, not replace, these efforts by civil authorities to develop their own aerial reconnaissance capabilities. The committee urges the Department of Defense to provide technical and other assistance to the Department of Homeland Security so that the civil agencies with the primary responsibility for border enforcement will have the robust capabilities necessary to detect, track, investigate, and apprehend illicit cross-border traffic.

At a hearing of the Committee on Armed Services on March 15, 2005, the Commander, NORTHCOM, who is the combatant commander charged with the defense of the continental United States, stated that he would investigate the potential for UAVs to support the homeland security mission along the borders. The authority provided by this provision would enable NORTHCOM to more actively participate in defense of U.S. borders, communicating information to trained military National Guardsmen and other law enforcement officials who can actively engage those who might want to render harm to the United States.

Use of counterdrug funds for certain counterterrorism operations (sec. 1032)

The committee recommends a provision that would authorize the Department of Defense to utilize funds available for drug interdiction and counterdrug activities in fiscal years 2006 and 2007, as well as for the related detection, monitoring, and interdiction of terrorists, terrorism-related activities, and other related transnational threats on the borders and within the territorial waters of the United States. The committee believes that many narcotics trafficking activities are related to the financing of terrorist activities and may also include the illegal infiltration of criminal and terrorist elements into the United States. The committee believes that the Department of Defense can make significant contributions to the efforts of the Department of Homeland Security and related national, regional, and local law enforcement agencies to enhance the security of U.S. borders and territorial waters.

Support for counterdrug activities through bases of operation and training facilities in Afghanistan (sec. 1033)

The committee recommends a provision that would clarify section 1004 of the National Defense Authorization Act for Fiscal Year 1991 (Public Law 101-510), as amended, expressly authorizing the Secretary of Defense to permit the use of U.S. bases of operation or training facilities to facilitate the conduct of counterdrug activities in Afghanistan, including support for counterdrug related Afghan criminal justice activities. The committee understands that an effective Afghan legal structure is an essential aspect of a meaningful Afghan counterdrug strategy and supports the request of the Department of Defense to provide assistance in all aspects of counterdrug activities in Afghanistan, including detection, interdiction, and related criminal justice activities.

Subtitle D—Reports and Studies

Modification of frequency of submittal of Joint Warfighting Science and Technology Plan (sec. 1041)

The committee recommends a provision that would permit the Secretary of Defense to submit the Joint Warfighting Science and Technology Plan to Congress every two years, rather than annually. The comprehensive plan provides key guidance for development of responsive science and technology priorities and should be written to coincide with the Department of Defense's budgeting process and major decision-making cycle.

Review and assessment of Defense Base Act insurance (sec. 1042)

The committee recommends a provision that would require the Secretary of Defense, in coordination with the Office of Management and Budget, the Department of Labor, the Department of State, and the United States Agency for International Development, to review current and future needs, options, and risks associated with Defense Base Act insurance.

Congress enacted the Defense Base Act (DBA), 41 U.S.C. section 1651 et seq., in 1941 to provide workers' compensation to employees of government contractors working at U.S. defense bases overseas. The Government Accountability Office (GAO) has reported significant confusion among federal agencies and contractors over the application of DBA requirements in Iraq and other overseas locations.

The Department of Defense recently initiated a one-year pilot contract for a single insurer to provide DBA insurance for all Army Corps of Engineers contractors performing overseas. While this pilot program appears to be a constructive step, the committee believes that further guidance may be required to ensure that DBA requirements are clearly understood and consistently applied in a manner that provides the greatest benefits to the federal government and its contractor employees overseas.

Comptroller General report on corrosion prevention and mitigation programs of the Department of Defense (sec. 1043)

The committee recommends a provision that would direct the Comptroller General of the United States to conduct a report on the effectiveness of the corrosion prevention and mitigation programs of the Department of Defense. The report shall include assessments of the following: (1) the Department's November 2004 "Long-Term Strategy to Reduce Corrosion and the Effects of Corrosion on the Military Equipment and Infrastructure of the Department of Defense"; (2) the adequacy of the funding requested in the budget proposal for fiscal year 2006 and the adequacy of the funding programmed in the associated Future Years Defense Program to support that strategy; (3) the adequacy and effectiveness of the Department's organizational structure in implementing that strategy; (4) the progress made to date in establishing common corrosion and corrosion-related metrics, definitions, and procedures throughout the Department; (5) the progress made to date in estab-

lishing a baseline estimate of the scope of the Department's corrosion problem; (6) the extent to which the Department's strategy has been revised to incorporate the recommendations of the October 2004 Defense Science Board report on corrosion control; (7) the implementation of the Department's corrosion prevention and mitigation programs during fiscal year 2006; and (8) the Comptroller General's recommendations for addressing any shortfalls or areas of potential improvement identified in the course of preparing the report. The provision would require the Comptroller General to submit the report to the congressional defense committees not later than April 1, 2007.

Section 1067 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 (Public Law 107-314) required the Comptroller General (1) to monitor the implementation of the Department's long term strategy to reduce corrosion and the effects of corrosion on military equipment and infrastructure and (2) to provide an assessment to Congress on the extent to which that strategy has been implemented. The Comptroller General's assessment was provided to the Congress in June 2004. The committee believes that a follow-on report by the Comptroller General on Defense Department corrosion program management will support the committee's oversight of corrosion awareness and prevention and the role of the Department's Office of Corrosion Policy and Oversight in departmental planning, programming, and budgeting. The committee believes that the Department should continue to work on efforts to realize the large potential savings available from the prevention and mitigation of the impact of corrosion. The committee is concerned that the current organizational structure of the Department's corrosion prevention and mitigation program, and the funding requested for that program, may not allow the Department to achieve potential savings in a timely manner.

Subtitle E—Technical Amendments

Technical amendments relating to certain provisions of environmental defense laws (sec. 1051)

The committee recommends a provision that would make technical and conforming changes to the definition of "military munitions" in section 101 of title 10, United States Code, and to the cross-reference to "unexploded ordnance" in section 2703 of that title.

Subtitle F—Military Mail Matters

Safe delivery of mail in the military mail system (sec. 1061)

The committee recommends a provision that would require the Secretary of Defense to promptly develop and implement a plan to ensure that the mail within the military mail system is safe for delivery. The plan would provide for the screening of all mail within the military mail system in order to detect the presence of biological, chemical or radiological weapons, agents or pathogens, or explosive devices before the mail is delivered to its intended recipients. The provision would require the Secretary to include in the fiscal year 2007 budget request and future years defense plan a de-

scription of the amounts required in each fiscal year to carry out the plan.

The provision would also require the Secretary to submit a report on the plan to the congressional defense committees within 120 days of enactment of this Act. The report would include an assessment of any deficiencies in the military mail system with respect to safety; the plan developed pursuant to this provision; an estimate of the time and resources required to implement the plan; and a description of any delegation within the Department of Defense of responsibility for ensuring that mail within the military mail system is safe for delivery.

The provision would define mail within the military mail system as mail that is posted through the Military Post Offices (including Army Post Offices and Fleet Post Offices), the Department mail centers, military Air Mail Terminals, and military Fleet Mail Centers; any mail or package posted in the United States that is addressed to an unspecified member of the Armed Forces; and any official mail posted by the Department. Mail that has been screened for safety for delivery by the U.S. Postal Service (USPS) is excepted.

The committee believes that the Secretary must elevate the priority of ensuring the safety of the mail within the military mail system. Toward that end, the Department should develop uniform standards, concepts of operation, tactics, techniques, and procedures for screening against biological, chemical or radiological weapons, agents or pathogens, or explosive devices at mail centers. An example of the lack of standards or failure to comply with established standards was illustrated in the events surrounding the March 14, 2005, detection of anthrax in the Pentagon Remote Delivery Facility (RDF) and a later presumed detection of anthrax in a TRICARE mail sorting room. In both cases, established Department protocols were either not followed due to lack of knowledge or were ignored. Events at both the RDF and TRICARE facility highlight the lack of uniform standards and methods for ensuring that the Department mail is safe for delivery. It is apparent that to ensure uniformity and avoid errors, a standardized system must be developed that provides a reasonable level of capability and imposes uniform standards and methods. There are no current Department requirements for mail centers to operate collectively, either locally or regionally, to provide layers of defense to mitigate risk.

The committee recognizes that there is a large number of military mail delivery nodes and mail centers, and that screening every piece of mail entering the system is a challenging task. However, most mail entering the Department system goes through centralized sorting and transfer points at which effective monitoring can and should be implemented. Because the USPS screens mail that it delivers, there is no need for the Department to screen mail heading from the Department into the USPS, or mail received through and already screened by the USPS.

Elsewhere in this report, the committee recommends authorizing an additional \$12.0 million in Procurement and Research, Development, Test and Evaluation funding in fiscal year 2006 for military mail screening system development and demonstration, and pro-

curement of military mail screening equipment and augmented laboratory testing capabilities. The committee recommends these increases to ensure that resources are available to begin implementation of the plan as soon as possible.

Delivery of mail addressed to any service member (sec. 1062)

The committee recommends a provision that would require the Secretary of Defense to carry out a program through which mail and packages addressed to any American service member would be delivered to deployed members of the Armed Forces overseas. The provision would require the Secretary to designate appropriate overseas addresses to serve as hubs for the receipt of such mail, and would also require that such mail be screened to detect the presence of biological, chemical or radiological weapons, agents or pathogens, or explosive devices before it is delivered to members of the Armed Forces. The provision would require the Secretary to ensure that such mail and packages are widely distributed on an equitable basis, and that information is provided to the public regarding this program.

The committee's intent is to establish a program such as that originally established in 1967. The Department of Defense worked cooperatively to facilitate the delivery of mail addressed to any service member until October 30, 2001, when, in response to the anthrax attack involving U.S. postal offices, mail to unspecified service members was suspended.

The committee believes that the generosity of the American people in supporting American service members overseas should be encouraged by the Department. The committee acknowledges the growth in access to electronic communications and the popularity of such communications with American service members, but believes that there is no substitute for a letter or package from home, especially for a service member who may not otherwise receive such communication.

The committee is mindful of the importance of ensuring the safe delivery of mail in the military mail system. Elsewhere in this report, the committee recommends a provision that would require the Secretary to promptly develop and implement a plan to ensure that all mail within the military mail system, including mail and packages addressed to unspecified members of the Armed Forces, is screened for the presence of biological, chemical or radiological weapons, agents or pathogens, or explosive devices to ensure that it is safe for delivery.

Subtitle G—Other Matters

Policy on role of military medical and behavioral science personnel in interrogation of detainees (sec. 1071)

The committee recommends a provision that would require the Secretary of Defense to establish a uniform policy on the role of military medical and behavioral science personnel in interrogation of persons detained by the Armed Forces. The committee expects that in the development of the policy, the Department of Defense will seek the views of medical and behavioral health experts out-

side of the Department, including medical and behavioral science personnel, physicians, nurses, and psychologists; and scholars in medical ethics—scholars with civilian backgrounds.

The committee is aware that the Assistant Secretary of Defense (Health Affairs) has directed a policy review of the role of medical personnel in detainee operations, including humane medical treatment of detainees, reporting of alleged abuses, and maintenance of medical records. In addition, the committee is aware that the Surgeon General of the Army has directed an assessment of the role of medical personnel in detainee operations in Iraq and Afghanistan. The committee is concerned that the February 2005 report of Vice Admiral Albert T. Church, III, on Department of Defense detention operations, found that “since neither the Geneva Conventions nor U. S. military medical doctrine specifically address the issue of behavioral science personnel assisting interrogators in developing interrogation strategies, this practice has evolved in an ad hoc manner.” The committee concurs with the need for clarity on the role and status of medical personnel in interrogations, and believes that the Secretary should promptly address this issue.

Clarification of authority to issue security regulations and orders under Internal Security Act of 1950 (sec. 1072)

The committee recommends a provision that would amend section 21(a) of the Internal Security Act of 1950 (Public Law 81–831; 50 U.S.C. 797(a)) to authorize delegation of the authority to issue security regulations to civilian or military directors. The statute presently authorizes the Secretary of Defense to issue such regulations, as well as any military commander designated by the Secretary. The growth of defense agencies and field activities in the past 50 years has resulted in more installations and entities being headed by civilians or by military personnel who are not “commanders” in the formal sense. The provision would update the statute to recognize this change in organizational structure and enable the Secretary to designate either military commanders or military or civilian directors, as appropriate, to issue these essential regulations.

Items of Special Interest

Strategic seaports

In a statement for a hearing of the Subcommittee on Seapower of the Committee on Armed Services, the Commander, Transportation Command (TRANSCOM), stated that 95 percent of all material for Operation Iraqi Freedom was shipped by sea. This high volume of shipment by sea is consistent with past conflicts. The Mobility Capabilities Study has not yet been received by Congress, but is expected to address the role of TRANSCOM as the distribution process owner for the Department. A vital part of this distribution is the movement of goods and materials to ports of embarkation. The committee is concerned that certain ongoing processes within the Department may change the current requirements at these strategic seaports. The Quadrennial Defense Review could lead to changes in force structure. Both the Integrated Global Presence

and Basing Strategy and the Base Realignment and Closure process could realign where personnel and equipment will be located.

The committee directs the Secretary of Defense to deliver a report to the congressional defense committees by September 30, 2006, that includes an examination of projected requirements for throughput at strategic seaports, and any improvements required for rail facilities and port facilities and any other infrastructure necessary to achieve the required throughput.

TITLE XI—DEPARTMENT OF DEFENSE CIVILIAN PERSONNEL POLICY

Extension of authority for voluntary separations in reductions in force (sec. 1101)

The committee recommends a provision that would extend until September 30, 2010, the authorities contained in section 3502(f) of title 5, United States Code, which govern the order of retention of civilian personnel in a reduction in force. This extension is necessary as the Department of Defense prepares for 2005 Base Realignment and Closure.

Compensatory time off for certain nonappropriated fund employees (sec. 1102)

The committee recommends a provision that would authorize the Secretary of Defense to grant nonappropriated fund employees time off instead of overtime pay for overtime work, if requested by the employee.

The provision makes available to nonappropriated fund employees the same compensatory time off allowance available to other employees as contained in section 5543 of title 5, United States Code.

Extension of authority to pay severance payments in lump sums (sec. 1103)

The committee recommends a provision that would extend until October 1, 2010, the authority contained in section 5595(i)(4) of title 5, United States Code, for the Secretary of Defense or the secretary of the military department concerned to pay the entire amount of an employee's severance pay in one lump sum.

This provision is necessary to support force shaping and as the Department of Defense prepares for 2005 Base Realignment and Closure.

Continuation of Federal Employee Health Benefits program eligibility (sec. 1104)

The committee recommends a provision that would extend the requirement for the Department of Defense to pay the employer portion of Federal Employee Health Benefit premiums for 18 months for employees involuntarily separated, or voluntarily separated from a surplus position, due to a reduction in force. This extension is necessary as the Department prepares for 2005 Base Realignment and Closure.

Permanent and enhanced authority for Science, Mathematics, and Research for Transformation (SMART) defense education program (sec. 1105)

The committee recommends a provision that would modify the Science, Mathematics and Research for Transformation (SMART) pilot program that was initiated in the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108–375). The provision would make the program permanent and would provide additional authorities to the Department of Defense for implementation. Under the provision, the Department could provide fellowship as well as scholarship assistance to individuals pursuing technical degrees critical to national security. The provision would allow the Department to award financial assistance directly to an individual or to an administering entity, reducing the management burden on the Department. The provision would modify Section 1105 of the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108–375) to permit the Department to hire individuals participating in the program, which would expedite security clearances and other personnel processes.

The provision modifies the service requirement to include post-graduation time served in an interim position for up to two years as part of the individual's payback to the Department. Finally, the provision clarifies commitments of all program participants to repay the Department for financial assistance, if they voluntarily choose to drop out of the program, if they fail to maintain satisfactory academic progress, or if they are dropped from the program due to misconduct.

The committee established the SMART pilot scholarship program in fiscal year 2005 to address growing deficiencies in the numbers and types of scientists and engineers comprising our national security workforce. The committee commends the Department for quickly implementing the pilot program and notes that, in just the first year, hundreds of qualified individuals submitted applications for approximately 30 available scholarships. A permanent SMART program would maintain the committee's original goal of providing targeted educational assistance to individuals seeking a baccalaureate or an advanced degree in science and engineering disciplines deemed critical to national security by the Department.

The committee continues to believe that future U.S. technical dominance relies on a rapid, well-managed infusion of defense science and engineering personnel who are experts in 21st century defense-related critical skills. The committee authorizes the Department's budget request of \$10.3 million for the SMART defense education program for fiscal year 2006, which would more than double the number of scholarships and fellowships available for the next school year.

Items of Special Interest

Comptroller General report on policy concerning Department of Defense civilians deployed in support of contingency operations

The committee understands that the Department of Defense is increasingly reliant on civilian employees who volunteer to serve in

a theater of operation in support of military contingencies. The committee recognizes that guidelines and procedures have been established by the Department of Defense, applicable to civilians, covering roles, responsibilities, pay, compensation, and support in the event of injury or death. The committee believes that a review of current policy, procedures, and guidelines regarding civilian employees serving in support of contingency operations is warranted.

The committee directs the Comptroller General to conduct a review of Department policies concerning deployment of civilian employees in support of contingency operations. The review should include:

- (1) an examination of compliance by Department of Defense components with department-wide policies on deployment of civilian employees to Iraq and Afghanistan;
- (2) examination of lessons learned from those deployments regarding deployment of Department civilian personnel;
- (3) a comparison of mission, roles, and compensation for Department civilian personnel with those for military personnel; and
- (4) such recommendations as the Comptroller General concludes are appropriate regarding policies and benefits for Department civilian employees serving in support of contingency operations.

The committee directs the Comptroller General to deliver the required review to the congressional defense committees by March 1, 2006.

TITLE XII—MATTERS RELATING TO OTHER NATIONS

Commanders' Emergency Response Program (sec. 1201)

The committee recommends a provision that would authorize the Secretary of Defense to use up to \$500.0 million in operations and maintenance funding in each of fiscal years 2006 and 2007 for the Commanders' Emergency Response Program (CERP), under which commanders in Iraq receive funds for use in small humanitarian and reconstruction projects in their areas of responsibility, and for a similar program in Afghanistan. The provision would require the Secretary to provide quarterly reports to the congressional defense committees on the source, allocation, and use of funds pursuant to this authority. The committee expects the quarterly reports to include detailed information regarding the amount of funds spent, the recipients of the funds, and the specific purposes for which the funds were used.

The committee directs that funds made available pursuant to this authority be used in a manner consistent with the CERP guidance that the Under Secretary of Defense (Comptroller) issued in a memorandum dated February 18, 2005. This guidance directs that CERP funds be used to assist the Iraqi and Afghan people in the following representative areas: water and sanitation; food production and distribution; agriculture; electricity; healthcare; education; telecommunications; economic, financial and management improvements; transportation; irrigation; rule of law and governance; civic cleanup activities; civic support vehicles; repair of civic and cultural facilities; and other urgent humanitarian or reconstruction projects.

The committee notes that the Ronald W. Reagan National Defense Authorization Act for Fiscal Year 2005 (Public Law 108–375) required the Secretary to submit a report within 120 days of enactment to the Committees on Armed Services of the Senate and the House of Representatives identifying all provisions of law that, if not waived, would prohibit, restrict, limit, or otherwise constrain implementation of the CERP program in Iraq and Afghanistan. The committee has not yet received that report and directs that it be provided expeditiously.

Enhancement and expansion of authority to provide humanitarian and civic assistance (sec. 1202)

The committee recommends a provision that would expand the current authority of the Secretary of Defense to provide humanitarian and civic assistance in conjunction with military operations to include: (1) an increase to \$10.0 million in funding that may be used to conduct detection and clearance of landmines and other unexploded remnants of war; (2) authority to restore or develop the capacity of the host nation's information and communications infrastructure as necessary to provide basic information and commu-

nications services; and (3) authority to provide training, education, and technical assistance related to medical, dental, and veterinary care that is provided as part of humanitarian and civic assistance.

The provision would acknowledge that restoration or development of basic information and communications capacity should be considered a fundamental element of humanitarian and civic assistance, and that a functioning information and communications infrastructure is vital to the successful conduct of humanitarian missions. The provision would also acknowledge that medical, dental, and veterinary care provided to the host nation can be sustained and enhanced by the provision of related education, training, and technical assistance. Finally, the provision would recognize that the cost of equipment for the detection and clearance of landmines continues to increase, and that funding to support such activities must be periodically adjusted.

Modification of geographic limitation on payment of personnel expenses under bilateral or regional cooperation programs (sec. 1203)

The committee recommends a provision that would provide flexibility to combatant commanders to pay expenses for personnel from developing countries, even if the personnel are from a developing country that is not located within a combatant commander's area of responsibility.

Payment of travel expenses of coalition liaison officers (sec. 1204)

The committee recommends a provision that would amend section 1051a, title 10, United States Code, to authorize the Secretary of Defense to pay the travel expenses of certain foreign military officers assigned to U.S. combatant commands, component commands, or subordinate operational commands, when that travel is directed by the U.S. commander of such command in support of U.S. national interests. Additionally, the provision would extend the authority to provide administrative and fiscal support to coalition liaison officers through fiscal year 2009.

The committee acknowledges that contemporary military operations are almost always conducted in conjunction with allied nations and that foreign military officers increasingly play critical planning and operational roles within U.S. military headquarters. The committee believes that providing reasonable fiscal support to certain foreign military officers to facilitate U.S. and coalition military operations is warranted and appropriate.

TITLE XIII—COOPERATIVE THREAT REDUCTION WITH STATES OF THE FORMER SOVIET UNION

Specification of Cooperative Threat Reduction programs and funds (sec. 1301)

The committee recommends a provision that would define the Cooperative Threat Reduction (CTR) programs; define the funds as those authorized to be appropriated in section 301 of this Act; and authorize the CTR funds to be available for obligation for three fiscal years.

Funding allocations (sec. 1302)

The committee recommends a provision that would authorize \$415.5 million, the amount included in the budget request, for the Cooperative Threat Reduction (CTR) program. This provision would also authorize specific amounts for each CTR program element; require notification to Congress 30 days before the Secretary of Defense obligates and expends fiscal year 2006 funds for a purpose other than the purposes described in each of the CTR program elements; and provide limited authority to exceed the amount authorized for a specific CTR program element.

Permanent waiver of restrictions on use of funds for threat reduction in states of the former Soviet Union (sec. 1303)

The committee recommends a provision that would make permanent the President's authority to waive, on an annual basis, restrictions and eligibility requirements under the Cooperative Threat Reduction Act of 1993 (22 U.S.C. 5952) and section 502 of the Freedom Support Act (22 U.S.C. 5852). The President's current authority to waive these restrictions and requirements will expire on September 30, 2005. This provision would retain the requirements under the previous authority that, for any year in which a waiver is exercised, the President must submit a written certification to Congress that the waiver is important to the national security interests of the United States and a report. The report should explain: why a state does not satisfy the eligibility requirements; why a waiver is in the U.S. national security interests; and what the President's strategy is for promoting the commitment of that state to meeting the eligibility requirements for Cooperative Threat Reduction and Freedom Support Act assistance.

Modification of authority to use Cooperative Threat Reduc- tion funds outside the former Soviet Union (sec. 1304)

The committee recommends a provision that would modify the authority of the Department of Defense to use Cooperative Threat Reduction (CTR) funds outside the former Soviet Union by changing the existing requirement for a presidential determination and

certification to a requirement for a determination and certification made by the Secretary of Defense, with the concurrence of the Secretary of State. The provision would require the Secretary of Defense to notify the congressional defense committees not later than 15 days before obligating CTR funds pursuant to this authority.

The committee recommends this provision in order to increase the flexibility of the Department of Defense to respond quickly to an urgent new requirement for using CTR funds in an important nonproliferation project or activity outside of the former Soviet Union.

The committee believes that CTR funds should continue to be used primarily for the purpose of reducing weapons of mass destruction and proliferation threats from the states of the former Soviet Union. However, the committee supports the use of CTR funds outside of the former Soviet Union in order to address a specific, unanticipated and urgent threat, such as the recent use of this authority to assist in the destruction of newly discovered chemical weapons stocks in Albania. The committee expects that should a project or activity initiated pursuant to this authority require additional funding in future years, that specific project or activity would be budgeted for and would appear as a separate CTR program element in the President's budget request for future fiscal years.

The committee is supportive of the President's Proliferation Security Initiative (PSI) and urges the Department to establish a separate funding line for that purpose, should it be required. The committee does not believe that PSI activities in states outside of the former Soviet Union should be funded with CTR funds as a routine matter.

Repeal of requirement for annual Comptroller General assessment of annual Department of Defense report on activities and assistance under Cooperative Threat Reduction programs (sec. 1305)

The committee recommends a provision that would repeal the requirement for the Comptroller General to provide to Congress an assessment of the annual Department of Defense report to Congress on the Cooperative Threat Reduction (CTR) programs. The committee has been satisfied with the thoroughness of the Department annual reports on the CTR programs over the past several years. The annual assessments from the Comptroller General have confirmed that the Department annual reports have been comprehensive and accurate, and have met the requirements of the legislation mandating their submission to Congress. Therefore, the committee believes there is no reason to maintain the requirement for a Comptroller General assessment of the annual Department reports to Congress on the CTR programs.

TITLE XIV—AUTHORIZATION FOR SUPPLEMENTAL APPROPRIATIONS FOR IRAQ, AFGHANISTAN, AND THE GLOBAL WAR ON TERRORISM

Overview

The committee recommends a supplemental authorization of \$50.0 billion in funds to be appropriated for fiscal year 2006 to support operations in Iraq, Afghanistan, and the global war on terrorism. The committee notes that H. Con. Res. 95 of the 109th Congress, establishing the congressional budget for the Government for fiscal year 2006 and setting forth budgetary levels for fiscal year 2005 and 2007 through 2010, included \$50.0 billion for fiscal year 2006 in anticipation of additional needs in Iraq, Afghanistan, and the global war on terrorism. Providing authorization of these funds in advance of need ensures our troops in the field will be given adequate resources to meet ongoing demands of current military operations and any emergent needs of the ongoing global war on terrorism.

Summary table of authorization

The following table summarizes authorizations included in this title for ongoing operations in Iraq, Afghanistan, and the global war on terrorism for fiscal year 2006.

Title XIV EMERGENCY AUTHORIZATION

(Dollars in Thousands)

<u>Program Title</u>	<u>Senate Authorized</u>
PROCUREMENT	
Aircraft Procurement, Army	
UH-60 Black Hawk helicopter MEDEVAC Kits (10)	50,000
UH-60 Black Hawk helicopter attrition (2)	20,300
Total Aircraft Procurement, Army	70,300
Weapons and Tracked Combat Vehicles Procurement, Army	
M-107 .50 caliber sniper rifle	9,300
M249 SAW machine gun mods - RFI	5,800
Medium machine gun modifications - RFI	9,200
Soldier Enhancement Program - RFI	3,500
Total Weapons and Tracked Combat Vehicles , Army	27,800
Other Procurement, Army	
Up-armored M1151/M1152 HMMWVs or wheeled vehicle add-on armor	120,000
Mounted Battle Command on the Move	30,000
AN/PAQ-4 Aiming Light - Night Vision Equipment	32,100
Target acquisition laser observation night devices	53,400
Thermal Weapon System - Night Vision Equipment	31,600
Lightweight Laser Designation Rangefinders	4,600
Total Other Procurement, Army	271,700

Title XIV EMERGENCY AUTHORIZATION

(Dollars in Thousands)

<u>Program Title</u>	<u>Senate Authorized</u>
Aircraft Procurement, Navy	
UH-1Y attrition	74,000
UH-1 government furnished equipment	10,800
CH-53E night vision system FLIR kits	9,600
Low Band transmitters for EA-6B Aircraft	16,400
EA-6B Improved Capabilities III	73,000
Total Aircraft Procurement, Navy	183,800
Weapons Procurement, Navy	
Hellfire missiles	122,000
Small arms	36,800
Pioneer UAV engines and avionics	6,700
Total Weapons Procurement, Navy	165,500
Procurement of Ammunition, Navy & Marine Corps	
Dual mode laser guided training bombs	2,000
Small arms and landing party ammunition	16,000
M80/M62 7.62mm cartridge	1,500
.50 caliber linked armor piercing cartridge with tracer	13,000
M430 40mm high explosive dual purpose	30,000
M830A1 120mm high explosive with tracer cartridge	10,000
XM1028 120mm tank cartridge	3,000
M72A7 66mm high explosive rocket	11,000
MK154 non-electric detonator	10,000
M762A1 electric time fuze	2,000
M782 multi-option fuze for artillery	6,000
Total Procurement of Ammunition, Navy & Marine Corps	104,500

Title XIV EMERGENCY AUTHORIZATION (Dollars in Thousands)

<u>Program Title</u>	<u>Senate Authorized</u>
Other Procurement, Navy	
EOD equipment for naval coastal warfare units	7,000
Amphibious equipment for naval coastal warfare units	8,300
Expanded outfitting for maritime interdiction operations	4,300
Visit, Board, Search and Seizure Trainer	11,200
Total Other Procurement, Navy	30,800
Procurement, Marine Corps	
Guided MLRS pods for HIMARS	54,400
TPS-59(V3) radar system array rebuild	7,500
Enhanced position location reporting system	17,900
Hardened Engineer Vehicles	9,400
Total Procurement, Marine Corps	89,200
Aircraft Procurement, Air Force	
C-5 aircraft missile warning system upgrade	7,700
C-17 aircraft infrared measures	97,000
Total Aircraft Procurement, Air Force	104,700
Other Procurement, Air Force	
Mobile approach control system	51,900
Total Other Procurement, Air Force	51,900
Total Procurement	1,100,200

Title XIV EMERGENCY AUTHORIZATION

(Dollars in Thousands)

<u>Program Title</u>	<u>Senate Authorized</u>
OPERATIONS AND MAINTENANCE	
Operation and Maintenance, Army

Transfer Authority /a	[500,000]
Total	[2,500,000]
Total	50,000,000

a/ Values in brackets are non-additive

b/ Of the funds available in the IFF and only for the IED Task Force

Purpose (sec. 1401)

This section would establish this title as an authorization of appropriations for the Department of Defense for fiscal year 2006, in addition to the amounts otherwise authorized in this Act \$50.0 billion to be available for activities in support of operations in Iraq, Afghanistan, and the global war on terrorism.

Designation as emergency amounts (sec. 1402)

This section designates the authorization of appropriations in this title as an emergency requirement in accordance with H. Con. Res. 95 of the 109th Congress.

Army procurement (sec. 1403)

This section would authorize an additional \$369.8 million for fiscal year 2006 Army procurement.

Of these funds, the committee recommends \$120.0 million be provided to acquire additional up armored high (UAH) mobility multipurpose wheeled vehicles, wheeled vehicle add-on armor protection, or M1151/M1152 high mobility multipurpose wheeled vehicles (HMMWV), if the requirement for such vehicles is identified by a combatant commander and validated by the Secretary of the Army. The committee understands that the M1151/M1152 HMMWV is an improved version of the standard HMMWV. The M1151/M1152 HMMWV has a heavier chassis and improved engine that enable the use of removable add-on armor protection that provides the Army greater flexibility when deploying units. M1151/M1152 provides the same level of protection as an UAH.

Providing armored vehicles to our Armed Forces deployed in contingency operations has been an issue of great concern to this committee for the past two years. While the committee acknowledges that there were problems in rapidly supplying UAH and add-on armor for Army and Marine Corps tactical wheeled vehicles when the insurgency began in Iraq in the fall of 2003, the committee also commends the Department of Defense for taking aggressive steps to satisfy the evolving force protection requirements of U.S. Central Command (CENTCOM).

The Congress also responded quickly to the force protection requirements of CENTCOM. From fiscal year 2003 to fiscal year 2005, the Congress added \$1.9 billion to the President's requests to increase UAH production and almost \$1.6 billion to increase the production of add-on armor protection for tactical wheeled vehicles for the Army and Marine Corps. In the Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Tsunami Relief Act, 2005 (H.R. 1268, as adopted by the House of Representatives on May 5, 2005 and the Senate on May 10, 2005), the Congress added \$150.0 million for up-armored HMMWVs and \$610.9 million for add-on armor for tactical wheeled vehicles. With this funding, all current CENTCOM UAH and add-on armor requirements will be addressed.

The committee understands that UAH and add-on armor requirements are continuously under review. If the Commander, U.S. CENTCOM should submit an urgent needs statement for additional UAH or add-on armor, the committee believes that the Secretary should have funds immediately available to address that re-

quirement. The committee recommends an increase of \$120.0 million in Other Procurement, Army, to provide the Secretary with the flexibility to immediately address any additional CENTCOM requirements for armored vehicles or add-on armor.

Navy and Marine Corps procurement (sec. 1404)

This section would authorize an additional \$573.8 million for fiscal year 2006 Navy and Marine Corps procurement.

Air Force procurement (sec. 1405)

This section would authorize an additional \$156.6 million for fiscal year 2006 Air Force procurement.

Operation and Maintenance (sec. 1406)

This section would authorize an additional \$32.0 billion for fiscal year 2006 operation and maintenance programs.

Of the additional \$22.1 billion authorized for fiscal year 2006 in Operation and Maintenance, Army, the committee recommends that \$200.0 million may be utilized to obtain linguistic support for operations in Iraq and Afghanistan.

The committee is aware of an urgent need for additional linguistic support to military operations in Iraq and Afghanistan. The Commander, U.S. Central Command (CENTCOM), has identified this shortfall in communications with the Department of Defense and in testimony before the committee. The committee urges the Department of the Army to address this urgent requirement of the Commander, CENTCOM.

Defense Health Program (sec. 1407)

This section would authorize an additional \$977.8 million to the Defense Health Program for operation and maintenance for fiscal year 2006.

Military personnel (sec. 1408)

This section would authorize an additional \$11.6 billion for fiscal year 2006 to the Department of Defense for military personnel. As described elsewhere in this report, some of this funding provides for the additional cost of increased Army and Marine Corps personnel end strength.

Iraq Freedom Fund (sec. 1409)

This section would authorize an additional \$4.3 billion for an Iraqi Freedom Fund to be available until expended for activities in support of operations in Iraq, Afghanistan, and the global war on terrorism. These funds would be available for transfer to other accounts in this title, subject to a 5 day prior notification to the congressional defense committees.

Of the amounts provided in this section, not less than \$500.0 million is dedicated to the support of activities of the Joint Improvised Explosive Device Task Force. The funding provided for the Joint Improvised Explosive Device Task Force would ensure the rapid development and deployment of intelligence; tactics, techniques and procedures (TTP); training; and the associated procurement of equipment to counter IEDs in Iraq and Afghanistan.

The budget request included no funding for the procurement of Improvised Explosive Device (IED) countermeasures. The committee has closely monitored the efforts of the Department of Defense to provide force protection capabilities to our soldiers and Marines in Iraq and Afghanistan for countering the threat posed by IEDs. In October 2003, the Chief of Staff of the Army directed the formation of an IED task force to orchestrate Army efforts to eliminate IED threats, recommend best available responses, and direct the development and fielding of selected solutions. In June 2004, the Commander, U.S. Central Command (CENTCOM) asked the Secretary of Defense for an integrated Department response to the IED threat. On July 12, 2004, the Deputy Secretary of Defense approved the establishment of an Army-led Joint IED Defeat Integrated Process Team (IPT), which was organized around the existing Army IED Task Force, to immediately focus all counter-IED efforts within the Department.

The committee understands that the IPT identifies, prioritizes, and resources materiel and non-materiel solutions to the IED threat in a coordinated response across the services and the Department. The IPT, augmented by Joint Service staff, performs the counter-IED operational mission as the Joint IED Defeat Task Force (TF).

The committee understands that the Joint IED TF has expended much effort and funding to provide electronic countermeasure systems for the protection of U.S. convoys in Iraq and is working to procure thousands of additional jamming devices. The committee also understands that the procurement of current technology must be supplemented by the development of new counter-IED devices and employment of innovative techniques, tactics and procedures. The committee believes that the Joint IED TF should have dedicated funding to facilitate the rapid development of new technology and the rapid deployment of current IED countermeasures.

Transfer authority (sec. 1410)

This section would provide fiscal year 2006 transfer authority of \$2.5 billion to the Department of Defense for the authorizations contained in this title.

Budget Items

UH-60 Black Hawk helicopters

The budget request included \$562.0 million in Aircraft Procurement, Army (APA), for 41 UH-60 Black Hawk helicopters, including \$61.0 million for six UH-60 Black Hawk helicopters lost in Operation Iraqi Freedom (OIF) and Operation Enduring Freedom (OEF). The Army has lost 13 UH-60 Black Hawk helicopters since the onset of OIF and OEF. Using October 1, 2004 as a cutoff date, the Army requested \$50.8 million in the fiscal year 2005 supplemental budget for five UH-60 Black Hawk helicopters lost in OIF and OEF. The committee notes that the Army has an unfunded requirement for the replacement of two UH-60 Black Hawk helicopters; therefore, the committee recommends an increase of \$20.3 million in APA, for two additional UH-60 Black Hawk helicopters, for a total authorization of \$582.3.

UH-60 Black Hawk helicopter modifications

The budget request included \$33.3 million in Aircraft Procurement, Army (APA), for UH-60 Black Hawk helicopter modifications, but included no funding for HH-60L Black Hawk helicopter Medical Evacuation (MEDEVAC) Medical Equipment Packages (MEP). The Army has a requirement for 336 HH-60L MEDEVAC helicopters, including 156 MEDEVAC helicopters in the Active component and 180 MEDEVAC helicopters in the Reserve component, but only 24 HH-60L MEDEVAC helicopters in the inventory or scheduled for delivery in fiscal year 2005. The committee understands that the Army is using over 300 UH-60A Black Hawk helicopters without MEP kits to perform MEDEVAC missions, of which 75 are currently deployed in support of Operations Iraqi Freedom and Enduring Freedom. Given the shortfall in MEDEVAC helicopters and the high operational demand, the committee recommends an increase of \$50.0 million in APA, for 10 additional HH-60L MEP kits, for a total authorization of \$83.3 million.

M107 sniper rifle

The budget request included \$9.7 million in Weapons and Tracked Combat Vehicles, Army (WTCV), for the procurement of the M-107 .50 caliber sniper rifle. The M107 sniper rifle provides a man-portable, material destruction capability that enables sniper teams to employ greater destructive force at greater ranges and at a higher rate of fire that exceed the terminal effect capability of the M24 Sniper Weapon System. The Army has an inventory objective of 3,143 M107 sniper weapons but only has 1,300 fielded to soldiers in support of Operations Iraqi Freedom and Enduring Freedom. Additional funding for the M107 sniper rifle is on the Chief of Staff of the Army's unfunded priorities list. The committee recommends an increase of \$9.3 million in WTCV, for 774 additional M107 sniper rifles, for a total authorization of \$19.0 million.

Rapid fielding initiative

The budget request included \$15.4 million in Procurement of Weapons and Tracked Combat Vehicles Army (WTCV), to procure ancillary small arms equipment as part of the Rapid Fielding Initiative (RFI), an Army program to respond quickly to individual soldier equipment requirements and to provide soldiers engaged in or preparing for Operation Iraqi Freedom and other operations, with state-of-the-art individual weapons, clothing, and equipment, including radios. Additional funding for this initiative is on the Chief of Staff of the Army's unfunded priorities list. The committee continues to support this worthwhile program and remains committed to ensuring that the individual soldier, Active and Reserve, is personally equipped for advantage in combat and contingency operations. The committee recommends an increase of \$18.5 million in WTCV to procure M240B medium machine gun, M249 squad automatic weapon, and Soldier Enhancement Program ancillary equipment, for a total authorization of \$33.9 million for the RFI.

Night vision enhancements

The budget request included \$247.4 million in Other Procurement, Army (OPA), for the procurement of night vision enhance-

ments, including \$16.6 million for the AN/PAQ-4 laser aiming light, \$42.9 million for the AN/PVS-6 Mini Eyesafe Laser Infrared Observation Set and the Target Acquisition Laser Observation Night (TALON) device, and \$83.7 million for the night vision thermal weapon sight (TWS). Lessons learned from Operations Iraqi Freedom and Enduring Freedom have shown that night vision equipment increases survivability and lethality of soldiers in combat and has been used for force protection missions, convoy operations, and perimeter security missions. Additional funding for the procurement of AN/PAQ-4 laser aiming lights, TALONs, and TWSs has been identified on the Chief of Staff of the Army's unfunded priorities list. The committee recommends an increase of \$117.1 million in OPA for the procurement of 40,182 aiming lights, 712 TALONs, and 2,528 TWSs, for a total authorization of \$364.5 million.

Lightweight laser designation rangefinder

The budget request included \$12.7 million in Other Procurement, Army (OPA), for the procurement of the Lightweight Laser Designation Rangefinder (LLDR), a man-portable, modular system designed for day and night, all weather target acquisition. The LLDR meets a critical requirement for precision target location and engagement for artillery fire support teams and is in high demand in Operations Iraqi Freedom and Enduring Freedom. Additional funding for LLDR procurement is on the Chief of Staff of the Army's unfunded priorities list. The committee recommends an increase of \$4.6 million in OPA for the procurement of 15 additional LLDRs, for a total authorization of \$17.3 million.

Mounted battle command on the move

The budget request included \$870,000 in Other Procurement, Army (OPA), for the Mounted Battle Command on the Move (MBCOTM) system, which provides a battle command platform for maneuver commanders for echelons from cavalry squadron through unit of employment. The MBTCOM will be hosted on the Bradley Fighting Vehicle, the Stryker Command Vehicle, and the High Mobility Multipurpose Wheeled Vehicle (HMMWV). The MBCOTM will provide commanders with an automated tactical command post for mobile operations, rather than relying on a fixed site command post. The committee understands that the Army intends to field this capability in fiscal year 2006 for units deploying to Operation Iraqi Freedom. Additional funding for MBCOTM procurement has been identified on the Chief of Staff of the Army's unfunded priorities list. The committee recommends an increase of \$30.0 in OPA for the procurement of 15 MBTCOM systems to be mounted on the HMMWV, for a total authorization of \$30.9 million.

The committee notes that the Marine Corps has a similar initiative for on-the-move communications under the Control On-The-Move Network, Digital Over the Horizon Relay program and encourages the Army-Marine Corps Board to review these programs for cooperative development and efficiencies.

UH-1Y helicopters

The budget request included \$307.5 million in Aircraft Procurement, Navy (APN), for the procurement of UH-1Y and AH-1Z helicopters. There is no UH-1 manufacturing line to build helicopters to replace UH-1N helicopters lost in Operations Iraqi Freedom and Enduring Freedom. However, the Marine Corps does have a program to acquire new-build UH-1Y helicopters as replacement aircraft. The program is currently in low-rate initial production. The Marine Corps needs to replace four aircraft lost during current operations. The committee recommends an increase of \$74.0 million in APN for four additional UH-1Y helicopters.

The Marine Corps needs to procure 18 sets of government furnished equipment (GFE) to retain the UH-1N utility helicopters until new UH-1Y helicopters are procured. Without this funding, the operational force inventory will be reduced by 14 UH-1Ns for 12 months until UH-1Ys can be delivered. The committee recommends an increase of \$10.8 million in APN for UH-1 GFE.

The committee notes that the procurement of UH-1Y helicopters and government furnished equipment are on the Commandant of the Marine Corps' unfunded priorities list. The committee recommends a total authorization of \$392.3 million in APN, for the procurement of UH-1Y and AH-1Z helicopters.

EA-6B ICAP III

The budget request included \$120.6 million in Aircraft Procurement, Navy (APN), for modifications to the EA-6B, including \$52.2 million for the procurement of Improved Capabilities III (ICAP III) systems modifications.

The EA-6B is a high-demand, low-density key enabler for joint combat operations. The ICAP III systems modification removes over 70 aging and unreliable weapons replaceable assemblies (WRAs). The procurement of seven additional EA-6B ICAP III kits meets the Navy's minimum requirement for ICAP III equipped EA-6B aircraft. Procurement of ICAP III is included on the Chief of Naval Operations' unfunded priorities list. The committee recommends an increase of \$73.0 million in APN for the procurement of seven additional EA-6B ICAP III kits.

Low band transmitters for EA-6B aircraft

The budget request included \$120.6 million in Aircraft Procurement, Navy (APN), for modifications to the EA-6B aircraft, including \$9.6 million for procurement of low band transmitters. The EA-6B is a high-demand, low-density electronic warfare aircraft that is being heavily used in the global war on terrorism. The low band transmitter gives the EA-6B aircraft expanded jamming capability and is more reliable and maintainable than the current system. The procurement of additional EA-6B aircraft low band transmitters has been included on the Chief of Naval Operations' unfunded priorities list. The committee recommends an increase of \$16.4 million in APN for the procurement of 11 EA-6B aircraft low band transmitters to ensure sufficient numbers are available to support critical global war on terrorism missions.

CH-53E Helicopter Night Vision Systems

The budget request included \$14.9 million in Aircraft Procurement, Navy, for H-3 helicopter modifications, including \$600,000 for the procurement of CH-53E Helicopter Night Vision System (HNVS) Forward Looking Infrared (FLIR) kits. The committee notes that, currently, the Marine Corps has 71 FLIRs to share among 148 aircraft, with 26 on contract to be delivered in fiscal years 2005 and 2006. Another 51 aircraft have FLIR installation provisions, but do not have FLIR turrets to install. The HNVS FLIR improves the CH-53's ability to operate in night operations in the austere mountainous and desert terrain typical of the U.S. Central Command area of operations. Additional funding for HNVS FLIR procurement for the CH-53 helicopter is on the Commandant of the Marine Corps' unfunded priorities list. The committee recommends an increase of \$9.6 million in APN for the procurement of 16 additional HNVS FLIRs, for a total authorization of \$24.5 million.

Hellfire missiles

The budget request included no funds in Weapons Procurement, Navy (WPN) for the procurement of AGM-114 Hellfire missiles. The Hellfire is a laser-guided missile primarily employed against point targets by Navy and Marine Corps rotary wing aircraft. Total Navy and Marine Corps use of the two variants of Hellfire in the global war on terrorism exceeds 900 missiles. The Navy's intent was to replace its inventory of these missiles with the Joint Common Missile, but this program has recently been terminated by the Department of Defense, and there is a projected inventory shortage of AGM-114 Hellfire missiles for the Marine Corps. Additional funding for Hellfire is included on the Chief of Naval Operations' unfunded priorities list. The committee recommends an increase of \$122.0 million in WPN for the procurement of Hellfire missiles.

Small arms

The budget request included \$22.6 million in Weapons Procurement, Navy (WPN) for the initial procurement, modernization, standardization, and stock replenishment of a wide variety of small arms and weapons. Fleet and joint force protection requirements have expanded as a result of the global war on terrorism. Explosive ordnance disposal teams and naval coastal warfare units, in particular, need small arms for their own protection. Additional funding for small arms has been included on the Chief of Naval Operations' unfunded priorities list. The committee recommends an increase of \$36.8 million in WPN for the procurement of small arms.

Pioneer tactical unmanned aerial vehicle

The budget request included \$1.9 million in Weapons Procurement, Navy (WPN) for modernization efforts for the Pioneer tactical unmanned aerial vehicle (TUAV). The Pioneer TUAV provides near real-time reconnaissance, surveillance, target acquisition, combat assessment, and battlefield management within line-of-sight of a ground control station. The Pioneer TUAV is being heavily used in Operation Iraqi Freedom. Additional funding for 12 Pioneer engines and avionics, due to its high usage rates, has been re-

quested on the Chief of Naval Operations' and the Commandant of the Marine Corps' unfunded priorities list. The committee recommends an increase of \$6.7 million in WPN for the procurement of engines and avionics for the Pioneer TUAV.

Dual mode laser guided training bombs

The budget request included \$24.6 million in Procurement of Ammunition, Navy and Marine Corps (PANMC), for dual mode laser guided training bombs. The committee notes that the dual mode laser guided training bomb improves the use of laser guided bombs (LGBs) in combat. The training bomb provides actual hardware for aircrews and tactics development at a reduced cost while maintaining inventories of LGBs. The committee recommends an increase of \$2.0 million in PANMC for dual mode laser guided training practice bombs.

Small arms and landing party ammunition

The budget request included \$35.6 million in Procurement of Ammunition, Navy and Marine Corps (PANMC), for small arms and landing party ammunition. The committee notes that small arms training requirements for force protection, homeland defense, maritime interdiction operations, and security force operations have increased by 50 percent since the commencement of the global war on terrorism. Additional funding for small arms and landing party ammunition has been identified on the Chief of Naval Operations unfunded priorities list. The committee recommends an increase of \$16.0 million in PANMC for small arms and landing party ammunition.

M80/M62 7.62mm cartridge

The budget request included \$7.9 million in Procurement of Ammunition, Navy and Marine Corps (PANMC), for the Cartridge M80 7.62mm four-ball cartridge and one tracer M62 linked. According to Marine Corps officials, this munition is currently experiencing an extremely high rate of use in operations in support of the global war on terrorism. Additional funding for the Cartridge M80 7.62mm four-ball cartridge and one tracer M62 linked has been identified on the Commandant of the Marine Corps unfunded priorities list. The committee recommends an increase in PANMC of \$1.5 million for the M80 7.62mm four-ball cartridge and one tracer M62 linked.

.50 caliber linked armor piercing cartridge with tracer

The budget request included \$28.0 million in Procurement of Ammunition, Navy and Marine Corps (PANMC), for the .50 caliber linked armor piercing cartridge with tracer. Additional funding for the .50 caliber linked armor piercing cartridge with tracer has been identified on the Commandant of the Marine Corps unfunded priorities list. Marine Corps officials also note that this munition is currently experiencing an extremely high rate of use in support of the global war on terrorism. The committee recommends an increase of \$13.0 million in PANMC for the .50 caliber linked armor piercing cartridge with tracer.

M430 40mm high explosive dual purpose

The budget request included \$40.7 million in Procurement of Ammunition, Navy and Marine Corps (PANMC), for the M430 40mm high explosive dual purpose cartridge. According to Marine Corps officials, this munition is currently experiencing an extremely high rate of use in support of the global war on terrorism. Additional funding for the M430 40mm high explosive dual purpose cartridge has been identified on the Commandant of the Marine Corps unfunded priorities list. The committee recommends an increase of \$30.0 million in PANMC for the M430 40mm high explosive dual purpose cartridge.

M830A1 120mm high explosive with tracer cartridge

The budget request included no funding in Procurement of Ammunition, Navy and Marine Corps (PANMC), for the M830A1 120mm high explosive with tracer cartridge. According to Marine Corps officials, this munition is extremely effective against buildings, bunkers, and light armored vehicles and experienced an extremely high usage rate in Operations Iraqi Freedom and Enduring Freedom. Additional funding for the M830A1 120mm high explosive with tracer cartridge has been identified on the Commandant of the Marine Corps unfunded priorities list in order to replenish deleted stocks and ensure proper munitions inventory. The committee recommends an increase of \$10.0 million in PANMC for the M830A1 120mm high explosive with tracer cartridge.

XM1028 120mm tank cartridge

The budget request included no funding in Procurement of Ammunition, Navy and Marine Corps (PANMC), for the XM1028 120mm tank cartridge. The committee notes the utility of the XM1028 120mm canister round in improving the M1A1 Main Battle Tank's urban warfare capability, improving its survivability against massed assaulting infantry with hand held anti-tank and automatic weapons. Additional funding for the XM1028 120mm tank cartridge has been identified on the Commandant of the Marine Corps unfunded priorities list. The committee recommends an increase of \$3.0 million in PANMC for the XM1028 120mm tank cartridge in support of the Marine Corps' total munition requirement.

M72A7 66mm high explosive rocket

The budget request included no funding in Procurement of Ammunition, Navy and Marine Corps (PANMC), for the M72A7 66mm high explosive rocket. According to Marine Corps officials, this munition was recently identified as an urgent requirement in support of the global war on terrorism. Additional funding for the M72A7 66mm high explosive rocket has been identified on the Commandant of the Marine Corps unfunded priorities list. The committee recommends an increase of \$11.0 million in PANMC for the M72A7 66mm high explosive rocket.

MK154 non-electric detonator

The budget request included no funding in Procurement of Ammunition, Navy and Marine Corps (PANMC), for the MK154 non-

electric detonator. The committee notes that the budget request procures only 4 percent of the approved acquisition objective (AAO) of the MK154 non-electric detonator. The committee believes that constrained procurement of the MK 154 non-electric detonator can be problematic given the usage rates in support of the global war on terrorism. Additional funding for the MK154 non-electric detonator has been identified on the Commandant of the Marine Corps unfunded priorities list in order to increase procurement toward the AAO and ensure proper munitions inventory. The committee recommends an increase of \$10.0 million in PANMC for the MK154 non-electric detonator.

M762A1 electronic time fuze

The budget request included no funding in Procurement of Ammunition, Navy and Marine Corps (PANMC), for the M762A1 electronic time fuze. The committee notes that the M762A1 is replacing less capable fuzes in the inventory. Additional funding for the M762A1 electronic time fuze has been identified on the Commandant of the Marine Corps unfunded priorities list. The committee recommends an increase of \$2.0 million in PANMC for the M762A1 electronic time fuze.

M782 multi-option fuze for artillery

The budget request included \$2.2 million in Procurement of Ammunition, Navy and Marine Corps (PANMC), for the M782 multi-option fuze for artillery. The committee notes that the M782 multi-option fuze for artillery is the replacement for five different types of fuzes in the current Marine Corps inventory. Additional funding for the M782 multi-option fuze for artillery has been identified on the Commandant of the Marine Corps unfunded priorities list. The committee recommends an increase of \$6.0 million in PANMC for the M782 multi-option fuze for artillery.

Explosive ordnance disposal equipment allowance for naval coastal warfare units

The budget request included \$28.4 million in Other Procurement, Navy (OPN) for explosive ordnance disposal equipment. Naval coastal warfare (NCW) units are being heavily used in the global war on terrorism, with NCW mobile inshore undersea warfare units providing the security for the oil platforms in much of the U.S. Central Command's area of responsibility. These units have certain explosive ordnance disposal equipment shortages, including cargo trucks, generators, forklifts, and water trailers. Additional funding for this equipment has been requested on the Chief of Naval Operations' unfunded priorities list. The committee recommends an increase of \$7.0 million in OPN for explosive ordnance disposal equipment for naval coastal warfare units.

Amphibious equipment allowance for naval coastal warfare units

The budget request included \$149.7 million in Other Procurement, Navy (OPN) for amphibious equipment. Naval coastal warfare (NCW) units are being heavily used in the global war on terrorism, with NCW mobile inshore undersea warfare units providing

the security for the oil platforms in much of the U.S. Central Command's area of responsibility. These units have identified shortages of cargo trucks, generators, forklifts, and water trailers. Additional funding for this equipment has been included on the Chief of Naval Operations' unfunded priorities list. The committee recommends an increase of \$8.3 million in OPN for amphibious equipment for naval coastal warfare units.

Equipment and trainer for maritime interdiction operations

The budget request included \$60.8 million for command support equipment in Other Procurement, Navy (OPN). A key mission for the Navy in the global war on terrorism has been to conduct maritime interdiction operations (MIO), where naval teams visit, board, and search vessels, some of which are non-compliant. Additional funding is required to improve the MIO teams' abilities to protect themselves from terrorist-related threats. Additional funding for the necessary weapons, body armor, helmets, communications gear, breaching and boarding equipment, and medical supplies has been requested on the Chief of Naval Operations' unfunded priorities list. The Chief of Naval Operations' unfunded priorities list also requests additional funding for a visit, board, search and seizure trainer (VBSST) at the Navy Center for Anti-terrorism. The committee recommends an increase of \$4.3 million in OPN for the procurement of the necessary MIO equipment, and an increase of \$11.2 million in OPN for the procurement of the VBSTT.

High mobility artillery rocket system

The budget request included \$176.8 million in Procurement, Marine Corps (PMC), for the High Mobility Artillery Rocket System (HIMARS). HIMARS provides Marine forces immediate, precision fires with its 24 hour, all weather long-range precision strike capability. The committee understands that with additional funding the Marine Corps could accelerate the fielding of a guided munitions capability, by procuring Guided Multiple Launch Rocket System (GMLRS) rockets. GMLRS rockets are the tactical munitions for HIMARS. With these rockets, the Marine Corps could accelerate HIMARS fielding within 18 months to support the global war on terrorism, particularly Operation Iraqi Freedom. Additional funding for procurement of GMLRS rockets is on the Commandant of the Marine Corps' unfunded priorities list. The committee recommends an increase of \$54.4 million in PMC, for the procurement of 480 GMLRS rockets, for a total authorization of \$231.2 million.

AN/TPS-59(V3) radar system array rebuild

The budget request included \$12.2 million in Procurement, Marine Corps (PMC), for radar systems, including \$5.6 million for the rebuild of one AN/TPS-59(V3) radar system array. The AN/TPS-59 radar is a critical low-density item being used extensively in current global war on terror operations. The AN/TPS-59(V)3 radar system is the only long-range, three-dimensional surveillance radar in the Marine Corps inventory. The high ops tempo and harsh environmental conditions of Operation Iraqi Freedom have caused antennas to degrade and require additional maintenance. The Marine Corps requested funding to rebuild one AN/TPS-59(V3) radar in

fiscal year 2005, but the requirement remains unfunded. The committee believes that rebuilding two AN/TPS-59(V3) radars will allow the Marine Corps to maintain the reliability, availability, and maintainability of the radar. Additional funding for the rebuild of one additional AN/TPS-59(V3) is on the Commandant of the Marine Corps' unfunded priorities list. The committee recommends an increase of \$7.5 million in PMC, for the AN/TPS-59(V3) radar system, for a total authorization of \$19.7 million.

Enhanced position location reporting system

The budget request included \$29.0 million in Procurement, Marine Corps (PMC), for radio systems, but included no funding for the Enhanced Position Location Reporting System (EPLRS), a tactical data radio which provides the only dedicated source of wireless data connectivity for tactical Marine Corps units above regimental level of command, extending to battalion and company level headquarters. The committee understands that the Joint Tactical Radio System (JTRS) was intended to fill this capability gap, but the committee recently learned that JTRS development will be delayed for 30 months. The committee understands that additional funding would enable the Marine Corps to procure EPLRS radio sets, their associated network management platforms, and the increased requirement for EPLRS radio sets throughout Marine operating forces to support the expanded use of Command and Control On the Move Network Digital Over the Horizon Relay (CONDOR). This item is on the Commandant of the Marine Corps' unfunded priorities list. The committee recommends an increase of \$17.9 million in PMC, for the procurement of 425 EPLRS radio sets, for a total authorization of \$46.9 million.

The committee strongly encourages the Assistant Secretary of Defense for Networks and Information Integration to immediately waive JTRS compliance for the procurement of EPLRS radios for the Marine Corps. The committee also notes that the Army has a similar initiative for on-the-move communications under the Mounted Battle Command on the Move program and encourages the Army-Marine Corps Board to review these programs for cooperative development and efficiencies.

Explosive ordnance disposal equipment

The budget request included \$42.6 million in Procurement, Marine Corps (PMC), for explosive ordnance disposal equipment, but included no funding for the hardened engineer vehicle. The Marine Corps has an immediate need for hardened engineer and explosive ordnance disposal (EOD) vehicles with a V-shaped hull designed to withstand both anti-personnel and anti-tank mine blasts and an nuclear, biological and radiological overpressure system. This item is on the Commandant of the Marine Corps' unfunded priorities list. The committee recommends an increase of \$9.4 million in PMC for hardened engineer vehicles, for a total authorization of \$52.0 million.

C-5 aircraft missile warning system upgrade

The budget request included \$71.1 million in Aircraft Procurement, Air Force (APAF), for modifications to the C-5 aircraft, but

included no funding to upgrade the AAR-47 missile warning sets (MWSs) on the aircraft. With the proliferation of man-portable air defense systems, airlift aircraft are vulnerable to the shoulder-launched infrared surface-to-air missiles. The AAR-47 MWS is currently installed on 50 C-5B and one C-5A aircraft. An upgrade is available to this MWS which would provide a new processor, improved system sensors, a new control indicator unit, and a new laser warning detection system. Funding for this upgrade has been included on the Chief of Staff of the Air Force's unfunded priorities list. The committee recommends an increase of \$7.7 million in OPAF to upgrade the AAR-47 MWS on the C-5 aircraft.

C-17 aircraft infrared countermeasures

The budget request included \$260.8 million in Aircraft Procurement, Air Force (OPAF), for modifications to the C-17 aircraft, including \$84.5 million for the installation of the large aircraft infrared countermeasure system (LAIRCM). This system provides protection against man-portable air defense systems (MANPADS), which are widely available and have been used by terrorists in Operations Enduring Freedom and Iraqi Freedom against both military and commercial aircraft. Additional funding for LAIRCM is included on the Chief of Staff of the Air Force's unfunded priorities list. The committee recommends funding this increase of \$97.0 million for the procurement of LAIRCM for the C-17 aircraft.

Mobile approach control system

The budget request included \$16.8 million in Other Procurement, Air Force (OPAF), for air traffic control and landing systems, including \$11.8 million for the modification and refurbishment of the mobile approach control system (MACS), but included no funding for the procurement of MACS. MACS is a deployable radar approach control system that provides airspace control and precision approach control capability. The committee is concerned that the Air Force was unable to provide all of the MACS that were requested during Operations Enduring Freedom and Iraqi Freedom. Procurement for MACS has been included on the Chief of Staff of the Air Force's unfunded priorities list. The committee recommends funding an increase of \$51.9 million in OPAF for the procurement of three mobile approach control systems.

Body armor

The budget request included \$40.0 million in Operation and Maintenance, Army (OMA), for body armor, \$3.3 million in Operation and Maintenance, Navy (OMN), for body armor, \$2.2 million in Operation and Maintenance, Marine Corps (OMMC), for body armor, but no funding in Operation and Maintenance, Air Force (OPAF), for body armor. Body armor, composed of outer tactical vests, small armor protective inserts, and deltoid armor protection, continues to provide superior personal protection to service members deployed in support of the global war on terrorism. The committee remains committed to ensuring that the individual soldier, sailor, airman, and Marine, Active and Reserve, has the equipment necessary to ensure individual safety and combat lethality across the full spectrum of operations. In addition, the committee believes

that recent technological advances in protective and safety equipment must be delivered to deployed service members as soon as possible.

The committee recommends an increase of \$117.8 million for interceptor body armor or body armor components including: \$57.4 million in OMA for enhanced SAPI plates; \$3.1 million in OMN for interceptor body armor; \$2.4 million in Operation and Maintenance, Navy Reserve (OMNR), for interceptor body armor; and \$54.9 million in OMAF for deltoid armor protection. The committee expects that the Army will ensure the provision of enhanced SAPI plates to all members of the U.S. Armed Forces and appropriate civilian personnel deployed in the U.S. Central Command area of responsibility.

Expanded maritime interdiction operations training and outfitting

The budget request included no funding in Operation and Maintenance, Navy (OMN), for expanded maritime interdiction operations (MIO) training and outfitting. The committee notes that the Navy has an urgent requirement to train and outfit the MIO visit, board, search and seizure (VBSS) teams of 58 ships deploying in support of the global war on terrorism and the Proliferation Security Initiative. Additional funding for expanded MIO training and outfitting has been identified on the Chief of Staff of the Army unfunded priorities list. The committee recommends an increase of \$6.2 million in OMN for expanded maritime interdiction operations outfitting.

Small caliber weapons and mounts repair and replacement

The budget request included \$5.7 million in Operation and Maintenance, Navy (OMN), for the repair or replacement of small caliber weapons and weapon mounts. According to Navy officials, there has been a rapid growth in small caliber weaponry sustainment requirements due to the global war on terrorism. The committee understands that deployments of Naval Coastal Warfare personnel in support of Persian Gulf oil platform security and Naval Construction Force personnel in support of Iraq and Afghanistan infrastructure development has increased small caliber weapons readiness requirements. Additional funding for the repair or replacement of small caliber weapons and weapon mounts has been identified on the Chief of Naval Operations unfunded priorities list. The committee recommends an increase of \$24.0 million in OMN for the repair or replacement of small caliber weaponry and weapon mounts.

Field medical equipment

The budget request included \$6.5 million in Operation and Maintenance, Marine Corps (OMMC), for field medical equipment. According to Marine Corps officials, current medical inventories, which support operating rooms, aid stations, laboratories, and individual units, have been depleted in the conduct of contingency operations. Additional funding for field medical equipment has been identified on the Commandant of the Marine Corps unfunded prior-

ities list. The committee recommends an increase of \$19.0 million in OMMC for field medical equipment.

M1A1 tank depot maintenance

The budget request included \$9.6 million in Operation and Maintenance, Marine Corps (OMMC), for M1A1 tank depot maintenance. Additional funding for the M1A1 tank depot maintenance has been identified on the Commandant of the Marine Corps unfunded priorities list. According to Marine Corps officials, this unfunded priority supports the reset of tanks returning from contingency operations. The committee understands that average usage on tanks deployed in support of contingency operations is 3,000 kilometers per year. This is 10 times the quantity of miles historically executed in support of peacetime training. The committee also notes that the Marine Corps continues to effectively manage depot maintenance programs. The committee recommends an increase of \$40.0 million in OMMC for M1A1 tank depot maintenance.

DIVISION B—MILITARY CONSTRUCTION AUTHORIZATIONS

Explanation of funding tables

Division B of this Act authorizes funding for military construction projects of the Department of Defense. It includes funding authorizations for the construction and operation of military family housing and military construction for the Reserve components, the defense agencies, and the North Atlantic Treaty Organization Security Investment program. It also provides authorization for the base closure account that funds environmental cleanup and other activities associated with the implementation of base closure rounds.

The following tables provide the project-level authorizations for the military construction funding authorized in Division B of this Act and summarize that funding by account.

The budget request for fiscal year 2006 included authorization of appropriations for military construction and housing programs totaling \$12,051,611,000. Of this amount, the budget request included authorization of appropriations for \$1,880,466,000 to implement the results of the 2005 Defense Base Closure and Realignment round. The amount authorized for appropriation is included in the following table in a line designated Base Realignment & Closure V.

The committee recommends authorization of appropriations for military construction and housing programs totaling \$12,051,611,000. The total amount authorized for appropriations reflects this committee's commitment to continue a strong investment in the recapitalization of facilities and infrastructure in the United States, while continuing to invest prudently in overseas installations that are identified in the Integrated Global Presence and Basing Strategy released by the President in September 2004 as enduring installations with firmly defined, long-term operational missions.

Summary of FY 2006 Military Construction Authorization of Appropriations
(Dollars in Thousands)

<u>Military Construction</u>	<u>President's Budget</u>	<u>Senate Change</u>	<u>Senate Authorized</u>

Short title (sec. 2001)

The committee recommends a provision that would cite Division B of this Act as the Military Construction Authorization Act for Fiscal Year 2006.

TITLE XXI—ARMY

Summary

The budget request included authorization of appropriations of \$1,480.0 million for military construction and \$1,362.6 million for family housing for the Army in fiscal year 2006. The committee recommends authorization of appropriations for \$1,604.0 million for military construction and \$1,362.6 million for family housing for fiscal year 2006.

The committee recommends a decrease of \$15.0 million to the authorization of appropriations for three projects in Korea due to the recent award of similar construction contracts by the Army in Korea at amounts substantially less than appropriated by Congress in previous fiscal years. The committee anticipates that this trend of favorable contract award amounts will continue for the Army in fiscal year 2006.

The committee recommends increasing the authorization of appropriations by \$1.8 million for planning and design to complete design for the projects added by the committee.

Authorized Army construction and land acquisition projects (sec. 2101)

This provision contains the list of authorized Army construction projects for fiscal year 2006. The authorized amounts are listed on an installation-by-installation basis. The State list contained in this report is the binding list of the specific projects authorized at each location.

Family housing (sec. 2102)

This provision would authorize new construction and planning and design of family housing units for the Army for fiscal year 2006. It would also authorize funds for facilities that support family housing, including housing management offices and housing maintenance and storage facilities.

Improvements to military family housing units (sec. 2103)

This provision would authorize improvements to existing Army family housing units for fiscal year 2006.

Authorization of appropriations, Army (sec. 2104)

This provision would authorize specific appropriations for each line item contained in the Army's military construction and family housing budget for fiscal year 2006. This provision would also provide an overall limit on the amount the Army may spend on military construction projects.

Items of Special Interest

Report on permanent facilities for new Army units

On January 30, 2004, the Office of the Secretary of Defense approved a request by the Chief of Staff of the Army to increase the number of active modular Brigade Combat Team Units of Action (BCT(UA)) from 33 to 43 between fiscal years 2004 and 2006. On July 23, 2004, the Army announced the temporary locations for the UA's listed below, and will recommend permanent stations for the units as part of the 2005 round of Base Realignment and Closure (BRAC).

[Dollars in millions]

Location	Personnel increase	Cost of temporary facilities
Fort Stewart, Georgia	1,700	\$108.0
Fort Campbell, Kentucky	3,000	94.7
Fort Drum, New York	4,200	188.0
Fort Benning, Georgia	3,800	134.5
Fort Hood, Texas	5,000	152.8
Fort Polk, Louisiana	300	4.8
Fort Lewis, Washington	3,900	98.8
Fort Richardson, Alaska	2,600	78.4
Fort Bliss, Texas	3,800	131.2
Fort Riley, Kansas	3,400	138.5
Fort Bragg, North Carolina	5,300	152.4
Fort Carson, Colorado	3,700	128.5
Total	40,700	1,410.6

In order to support the rapid reorganization of combat units, the Secretary of the Army is using emergency authorities pursuant to section 2803, title 10, United States Code, to carry out military construction projects not otherwise authorized by law. The projects install utilities and prepare sites for the purchase and installation of temporary facilities to provide barracks and work areas for the new UAs. The 19,250 families of service members relocated as part of the reorganization are being absorbed within local communities in existing schools and into existing installation support facilities, such as child development centers and medical centers.

The temporary facilities, consisting of modular buildings and trailers, have a design life of five to seven years, depending on local climate. The trailers serving as barracks for permanently assigned military personnel have under-sized sleeping areas and gang latrines that do not meet minimal standards established by the Department of Defense for unaccompanied housing. Because the Army purchased the trailers as equipment items, no maintenance plan has been established, and therefore no funds have been programmed for the sustainment of the trailers.

The committee is concerned that the Army has not included funds to sustain or replace these trailers with permanent facilities in their Future Years Defense Plan (FYDP). Therefore, the committee directs the Secretary of the Army to submit to the Committee on Armed Services of the Senate by April 1, 2006, a report with the following information:

- (1) an inventory of the temporary facilities installed to meet requirements for the establishment of 10 (BCT(UA));

(2) an estimate of the scope and costs to maintain the temporary facilities through the end of their current use;

(3) a proposed time line to replace the temporary facilities with permanent facilities;

(4) a description and cost estimate for construction of permanent facilities required to replace the temporary facilities;

(5) an assessment by location of the scope and cost to add to or alter existing facilities required to support military personnel and their families;

(6) an assessment of the impact on local communities and actions taken by the Army to address those issues; and

(7) an estimate of the date that the Army will meet the Department goal to eliminate inadequate unaccompanied housing.

In addition, the committee directs the Secretary of Defense to report to the Committee on Armed Services of the Senate by February 15, 2006, on the Department's guidance relating to the procurement and use of temporary facilities to support personnel relocations related to BRAC 2005 and global presence changes.

TITLE XXII—NAVY

Summary

The budget request included authorization of appropriations of \$1,029.2 million for military construction and \$812.6 million for family housing for the Navy in fiscal year 2006. The budget request also included a proposal to use \$92.4 million in prior year unobligated funds authorized for military construction to reduce the request for authorization of appropriation for the Navy in fiscal year 2006. The committee recommends authorization of appropriations of \$1,102.7 million for military construction and \$815.8 million for family housing for fiscal year 2006.

The committee believes that the Navy should not use annual budget requests to carry out the reprogramming of unobligated funds from prior years. Therefore, the committee recommends rescinding \$92.3 million as a general reduction from prior year authorization of appropriations for military construction and housing projects for the Navy. The committee further recommends an authorization of appropriations for seven construction projects at their fully authorized amount as shown in the table, FY 2006 Authorization of Appropriations for Military Construction and Family Housing.

The committee recommends deferring the authorization of appropriations of \$13.7 million to construct a bachelor enlisted quarters at Naval Base Coronado, California under a pilot program authorized by section 2881a of title 10, United States Code, to enter into a public-private venture, until the authority in title 10, United States Code, is amended to authorize a fourth pilot project.

The committee also recommends deferring the authorization of appropriations of \$39.0 million to upgrade wharfs, first increment at world-wide locations, until final basing arrangements negotiated as part of the Integrated Global Presence and Basing Strategy are finalized with the host nation.

The committee recommends increasing the authorization of appropriations by \$4.0 million for planning and design to complete design for the projects added by the committee.

Authorized Navy construction and land acquisition projects (sec. 2201)

This section contains the list of authorized Navy construction projects for fiscal year 2006. The authorized amounts are listed on an installation-by-installation basis. The State list contained in this report is the binding list of the specific projects authorized at each location.

Family housing (sec. 2202)

This section would authorize new construction and planning and design of family housing units for the Navy for fiscal year 2006. It

would also authorize funds for facilities that support family housing, including housing management offices and housing maintenance and storage facilities.

Improvements to military family housing units (sec. 2203)

This section would authorize improvements to existing Navy and Marine Corps family housing units for fiscal year 2006.

Authorization of appropriations, Navy (sec. 2204)

This section would authorize specific appropriations for each line item in the Navy's military construction and family housing budget for fiscal year 2006. This section also provides an overall limit on the amount the Navy may spend on military construction projects.

Modification of authority to carry out certain fiscal year 2004 project (sec. 2205)

The committee recommends a provision that would amend section 2201 of the Military Construction Authorization Act for Fiscal Year 2004 (division B of Public Law 108-136) to increase a project authorization for Naval Weapons Station Earle, New Jersey.

Modification of authority to carry out certain fiscal year 2005 projects (sec. 2206)

The committee recommends a provision that would amend section 2201 of the Military Construction Authorization Act for Fiscal Year 2005 (division B of Public Law 108-375) to increase project authorizations at an unspecified world-wide location and at Quantico, Virginia.

Hockmuth Hall, Marine Corps Base Quantico, Virginia

The budget request included authorization of appropriations of \$2.6 million to construct the first increment of an addition to Hockmuth Hall at Marine Corps Base Quantico, Virginia. The budget request also included authorization for the full requirement of \$14.2 million for the addition to Hockmuth Hall.

Section 2807 of the Military Construction Act for Fiscal Year 2000 (Public Law 106-65) expressed a sense of Congress that, in preparing the budget for each fiscal year for military construction for submission to Congress under section 1105 of title 31, United States Code, the President should request an amount of funds for each proposed military construction project that is sufficient to produce a complete and usable facility or a complete and usable improvement to an existing facility. The committee notes that in limited instances, large military construction projects with a total cost exceeding \$50.0 million may be funded in phases consistent with established practices for such projects.

The budget request for the addition to Hockmuth Hall did not comply with congressional intent. Therefore, the committee recommends an increase of authorization of appropriations of \$1.4 million to construct the first phase of an addition to Hockmuth Hall, resulting in a complete and useable facility. The committee further directs the Navy to include a request for authorization of appropriations for the full remainder of the military construction requirement for this project in the fiscal year 2007 budget request.

TITLE XXIII—AIR FORCE

Summary

The budget request included authorization of appropriations of \$1,069.6 million for military construction and \$2,018.0 million for family housing for the Air Force in fiscal year 2006. The committee recommends authorization of appropriations of \$1,207.4 million for military construction and \$1,909.9 million for family housing for fiscal year 2006.

The committee recommends deferring authorization of appropriations of \$10.0 million to install an erosion control stabilization system at Fourth Cliff Recreation Annex, Massachusetts, until the Air Force can justify the military requirement.

The committee also recommends deferring the authorization of appropriations of \$45.4 million to construct family housing at Spangdahlem Air Base, Germany, until force structure requirements can be finalized within the Integrated Global Presence and Basing Strategy. The committee also directs the Air Force to reassess their plan to divest 331 adequate housing units at the former Bitburg Air Force Base, Germany, from the Air Force inventory.

The committee further recommends deferring the authorization of appropriations by \$48.7 million to replace family housing and \$11.1 million to improve housing at Bolling Air Force Base, Washington, DC., to allow the Air Force to pursue the replacement of inadequate housing using the alternative authority for the acquisition and improvement of military housing provided in subchapter 4 of chapter 169, title 10, United States Code.

The committee recommends decreasing the authorization of appropriations by \$7.7 million for two projects in Korea due to the recent award of similar construction contracts by the Air Force in Korea at amounts substantially less than appropriated by Congress in previous fiscal years. The committee anticipates that this trend of favorable contract award amounts will continue for the Air Force in fiscal year 2006.

The committee recommends increasing the authorization of appropriations by \$4.7 million for planning and design to complete design for the projects added by the committee.

Authorized Air Force construction and land acquisition projects (sec. 2301)

This section contains the list of authorized Air Force construction projects for fiscal year 2006. The authorized amounts are listed on an installation-by-installation basis. The State list contained in this report is the binding list of the specific projects authorized at each location.

Family housing (sec. 2302)

This section would authorize new construction and planning and design of family housing units for the Air Force for fiscal year 2006. It would also authorize funds for facilities that support family housing, including housing management offices and housing maintenance and storage facilities.

Improvements to military family housing units (sec. 2303)

This section would authorize improvements to existing Air Force family housing units for fiscal year 2006.

Authorization of appropriations, Air Force (sec. 2304)

This section would authorize specific appropriations for each line item in the Air Force's budget for fiscal year 2006. This section would also provide an overall limit on the amount the Air Force may spend on military construction projects.

Items of Special Interest**Planning and design, Air Force**

The committee directs that the amount of \$1.6 million, added to the authorization of appropriation for planning and design for the Air Force, be used to complete the design of a headquarters facility for the 70th Intelligence Wing at Fort Meade, Maryland.

TITLE XXIV—DEFENSE AGENCIES

Summary

The budget request included authorization of appropriations of \$1,042.7 million for military construction and \$48.9 million for family housing for defense agencies in fiscal year 2006. The committee recommends authorization of appropriations for \$1,042.7 million for military construction and \$48.9 million for family housing for fiscal year 2006.

The budget request also included authorization of appropriations of \$377.8 million to carry out environmental activities related to the previous rounds of Base Realignment and Closure (BRAC), and authorization of appropriations of \$1,880.5 million to initiate the decisions of the 2005 BRAC round.

The budget request included an analysis that, of the \$1,880.5 million for the 2005 BRAC round, \$376.0 million would remain unobligated at the end of fiscal year 2006 and would carry over into fiscal year 2007. The committee is also aware that the budget request was developed at a time when the Department of Defense of Defense anticipated reducing the capacity of military installations by 20–25 percent. The Secretary of Defense recently stated that, for the 2005 BRAC round, “the actual number will be less than the lower end of that range.”

Also, documents submitted to support the budget request did not account for savings to be realized from the cancellation of construction projects authorized in previous years. These savings would be available for transfer into the BRAC account in 2006 to augment funds for initial BRAC requirements.

Therefore, the committee recommends a decrease of \$376.0 million to the authorization of appropriations to initiate the decisions of the 2005 BRAC round. The committee also recommends that no funds may be obligated to initiate the decisions of the 2005 BRAC round until 21 days after the Secretary submits a report to the congressional defense committees describing the programs, projects, or activities to be carried out with funds from this account.

Authorized defense agencies construction and land acquisition projects (sec. 2401)

This section contains the list of authorized defense agency construction projects for fiscal year 2006. The authorized amounts are listed on an installation-by-installation basis. The State list contained in this report is the binding list of the specific projects authorized at each location.

Energy conservation projects (sec. 2402)

This section would authorize the Secretary of Defense to carry out energy conservation projects.

Authorization of appropriations, defense agencies (sec. 2403)

This section would authorize specific appropriations for each defense agency military construction program for fiscal year 2006. This provision also would provide an overall limit on the amount that may be spent on such military construction projects.

TITLE XXV—NORTH ATLANTIC TREATY ORGANIZATION SECURITY INVESTMENT PROGRAM

Summary

The Department of Defense requested authorization of appropriation of \$206.9 million for the North Atlantic Treaty Organization Security Investment Program for fiscal year 2006. The committee recommends an authorization of appropriation of \$206.9 million for fiscal year 2006.

Authorized NATO construction and land acquisition projects (sec. 2501)

This provision would authorize the Secretary of Defense to make contributions to the North Atlantic Treaty Organization Security Investment Program in an amount equal to the sum of the amount specifically authorized in section 2502 of this title and the amount of recoupment due to the United States for construction previously financed by the United States.

Authorization of appropriations, NATO (sec. 2502)

This provision would authorize appropriation of \$206.9 million for the United States' contribution to the North Atlantic Treaty Organization Security Investment Program for fiscal year 2006.

TITLE XXVI—GUARD AND RESERVE FORCES FACILITIES

Summary

The Department of Defense requested authorization of appropriations of \$722.8 million for military construction in fiscal year 2006 for National Guard and Reserve facilities. The committee recommends authorizations of appropriations for fiscal year 2006 of \$961.2 million to be distributed as follows:

<i>Account</i>	<i>Millions</i>
Army National Guard	\$464.7
Air National Guard	245.9
Army Reserve	121.1
Air Force Reserve	79.3
Naval and Marine Corps Reserve	50.2
Total	961.2

Authorized Guard and Reserve construction and land acquisition projects (sec. 2601)

This provision would authorize appropriations for military construction for the National Guard and Reserve by service component for fiscal year 2006. The state list contained in this report is the binding list of the specific projects authorized at each location.

Items of Special Interest

Unspecified minor construction, Army National Guard

The committee authorizes the Secretary of the Army, using funds authorized for unspecified minor construction for the Army National Guard, to construct an addition and alteration to a readiness center for \$1.5 million at Waterloo, Iowa.

Unspecified minor construction, Air National Guard

The committee authorizes the Secretary of the Air Force, using funds authorized for unspecified minor construction for the Air National Guard, to construct an addition and alteration to a field maintenance shop for \$1.5 million at Fort Dodge, Iowa.

Planning and design, Army National Guard

The committee directs that the amount of \$3.0 million, added to the authorization of appropriation for planning and design for the Army National Guard, be used to complete the design of a Joint Armed Services Reserve Center at Naval Air Station Brunswick, Maine.

TITLE XXVII—EXPIRATION AND EXTENSION OF AUTHORIZATIONS

Expiration of authorizations and amounts required to be specified by law (sec. 2701)

This provision would provide that authorizations for military construction projects, repair of real property, land acquisition, family housing projects, contributions to the North Atlantic Treaty Organization infrastructure program, and National Guard and Reserve military construction projects would expire on October 1, 2008, or the date of enactment of an act authorizing funds for military construction for fiscal year 2009, whichever is later. This expiration would not apply to authorizations for projects for which appropriated funds have been obligated before October 1, 2008, or the date of enactment of an act authorizing funding for military construction for fiscal year 2009, whichever is later.

Extension of authorizations of certain fiscal year 2003 projects (sec. 2702)

This section would extend the authorizations for certain fiscal year 2003 military construction projects until October 1, 2006, or the date of enactment of an act authorizing funds for military construction for fiscal year 2007, whichever is later.

Extension of authorizations of certain fiscal year 2002 projects (sec. 2703)

This section would extend the authorizations for certain fiscal year 2002 military construction projects until October 1, 2006, or the date of enactment of an act authorizing funds for military construction for fiscal year 2007, whichever is later.

Effective date (sec. 2704)

This provision would provide that titles XXI, XXII, XXIII, XXIV, XXV, and XXVI of this Act shall take effect on October 1, 2005, or the date of enactment of this Act, whichever is later.

TITLE XXVIII—GENERAL PROVISIONS

Subtitle A—Military Construction Program and Military Family Housing Changes

Increase in thresholds for unspecified minor military construction projects (sec. 2801)

The committee recommends a provision that would amend section 2805(a)(1) of title 10, United States Code, by raising the threshold of the cost of a construction project authorized by this section from \$1.5 million to \$2.5 million. This provision would also raise the threshold of the cost of a construction project intended solely to correct a deficiency that is life-threatening, health-threatening, or safety-threatening from \$3.0 million to \$4.0 million.

The committee notes that the Government Accountability Office, in a report released in February 2004 entitled “Long-term Challenges in Managing the Military Construction Program”, estimated that construction costs for the military have increased by an average of 41 percent since the thresholds amended in this provision were last adjusted.

Modification of cost variation authority (sec. 2802)

The committee recommends a provision that would amend section 2853 of title 10, United States Code, to establish a minimum amount for which the cost of a military construction project or for the construction, improvement, or acquisition of a military family housing project cannot vary. This provision would authorize the secretary concerned to carry out a project of which the cost varies beyond the minimum amount after the secretary concerned notifies the congressional defense committees and waits 21 days before carrying out the project.

Department of Defense housing funds (sec. 2803)

The committee recommends a provision that would amend section 2883 of title 10, United States Code, to require the Secretary of Defense to fund certain acquisitions and improvements of military housing solely through accounts established for that purpose. This provision would also amend section 2884 of title 10, United States Code, to add a requirement for the Secretary to report to the congressional defense committees annually with a summary of the funds obligated from defense housing accounts. This provision would improve the ability of Congress to account for funds obligated to carry out a contract for the acquisition or construction of family housing units using alternative authorities provided under subchapter IV of chapter 169, title 10, United States Code.

Temporary authority to use minor military construction authority for construction of child development centers (sec. 2804)

The committee recommends a provision that would direct the Secretary of Defense to carry out a temporary program for the construction of child development centers operated by the Department of Defense. This provision would increase the threshold in section 2805(a)(1) of title 10, United States Code, to \$7.0 million for unspecified minor construction projects carried out to construct child development centers. This provision would also increase the threshold in section 2805(a)(1) of title 10, United States Code, to \$8.0 million if the unspecified minor construction project is intended solely to correct a deficiency in a child development center that threatens the life, safety, or health of the occupants. This provision would also increase other thresholds in section 2805 of title 10, United States Code, to ensure continuity of the temporary authority. This provision would provide for the expiration of the authority on September 30, 2007.

This provision would also require the Secretary to establish procedures for the review of each project to be carried out under this section, and to report to the congressional defense committees by March 1, 2007, with a list and description of the projects carried out under this program, as well as recommendations for extension of the temporary authority.

The committee is concerned that the Department has a deficiency of approximately 38,000 spaces, equating to 167 child development centers, for the care of children of service members between the ages of 6 weeks and 5 years. In many cases, a family must wait 18 months before they can be accommodated at existing centers on military installations, resulting in the use of off-base facilities at a much greater cost and inconvenience for families. This deficiency has increased significantly in the past two years and adds a substantial burden to the families of deployed service members. Aside from housing, access to quality child care offered at military installations has become the top quality of life concern among military personnel.

It is the committee's intent that the authorities provided in this provision would be used to increase the options available to the Department to quickly address the shortfall in child development centers with temporary facilities and to transfer existing funds from other accounts to construct new centers.

Inapplicability to child development centers of restriction on authority to acquire or construct ancillary supporting facilities (sec. 2805)

The committee recommends a provision that would amend section 2881(b) of title 10, United States Code, to exempt child development centers from the restriction for ancillary facilities authorized to be constructed using the alternative authority for acquisition and improvements of military housing provided in subchapter IV of chapter 169, title 10, United States Code. The committee intends this provision to increase the options available to the Department of Defense to quickly address the shortfall in child development centers by including the construction of permanent facilities

as part of transactions carried out under the alternative authority for acquisition and improvements of military housing.

In order to enhance the quality of life provided to military members and their families, the committee encourages the Department to include the construction and operation of child development centers in all future plans to construct or improve family housing communities.

Authority to carry out exchanges of facilities including associated utilities, equipment, and furnishings (sec. 2806)

The committee recommends a provision that would amend section 18240 of title 10, United States Code, to amend the definition of “facility” in section 18240 to include utilities, equipment, and furnishings required to be installed in a facility.

Increase in number of family housing units in Korea authorized for lease by the Army at maximum amount (sec. 2807)

The committee recommends a provision that would amend section 2828(e)(4) of title 10, United States Code, to increase from 2,400 to 2,800 the number of family housing units the Secretary of the Army may lease in Korea, for which the maximum annual lease cost per unit is \$35,000.

The committee recommends this provision in order to allow the Secretary to provide leased housing units for military personnel and their families that meet the Department of Defense’s guidelines for adequate force protection/anti-terrorism measures in facilities, while supporting the U.S. military force structure and basing plans of the Commander, U.S. Forces, Korea.

Subtitle B—Real Property and Facilities Administration

Authority to lease non-excess property of Department of Defense field activities (sec. 2821)

The committee recommends a provision that would amend sections 2667a of title 10, United States Code, to authorize the Secretary of Defense to lease non-excess property that is under the control of a Department of Defense field activity. This provision would grant field activities the same authorities currently available to defense agencies under section 2667a of title 10, United States Code.

Modified criteria for agreements to limit encroachments and other constraints on military training, testing and operations (sec. 2822)

The committee recommends a provision that would modify section 2684a of title 10, United States Code, to clarify that agreements to limit encroachments and other constraints on military training, testing, and operations authorized under that section may include ecologically-related real property and the airspace of a military installation. The provision also requires that agreements initiated after the date of enactment of this Act shall provide for equal sharing of the acquisition costs of such property and interests and that the acquisition costs of any lesser property interest, such as

an easement, may not exceed 70 percent of the appraised value of the land.

The committee believes that the authority created in section 2811 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003, and codified at section 2684a of title 10, is a potentially useful tool to create mutually beneficial relationships between the Department, State and local governments, and private organizations by promoting cooperation in maintaining military readiness and meeting environmental goals.

The committee believes that the changes proposed by this provision will strengthen existing law by clarifying that such cooperative conservation agreements may extend to the airspace of the installation and to real estate that conserves species habitat to the Department's benefit, even if that real estate is not directly adjacent to the installation. The committee also believes that the partner entities should, absent circumstances in which the potential impact of encroachment or development on the installation's mission is particularly great, equally share acquisition costs with the Department.

The committee intends to closely monitor implementation of this authority and recommends adding an annual reporting requirement.

Subtitle C—Land Conveyances

Part I—Army Conveyances

Land conveyance, Helena, Montana (sec. 2841)

The committee recommends a provision that would authorize the Secretary of the Army to convey by quitclaim deed to the Helena Indian Alliance, a parcel of property consisting of approximately 3 acres located at the Sheridan Hall Army Reserve Center, Helena, Montana for the purpose of supporting Native American health care, mental health counseling, and the operation of an educational training center. This provision would also require the Secretary to seek reimbursement from the Helena Indian Alliance for costs related to the conveyance.

Land conveyance, Army Reserve center, Bothell, Washington (sec. 2842)

The committee recommends a provision that would authorize the Secretary of the Army to convey, without consideration, to the Snohomish County Fire Protection District #10 a parcel of property consisting of approximately 1 acre located at the Army Reserve Center, Bothell, Washington for the purpose of permitting the fire district to operate a fire station on the property.

This provision would authorize the Secretary to include a reversionary clause in the terms of the conveyance, in the event the property conveyed was not used in accordance with the purpose stated in the authorization. This provision would also authorize the Secretary to seek reimbursement from the fire district for costs related to the conveyance.

Part II—Air Force Conveyances

Acquisition of build-to-lease family housing at Eielson Air Force Base, Alaska (sec. 2861)

The committee recommends a provision that would authorize the Secretary of the Air Force, if determined to be in the best economic interest of the Air Force, to purchase the entire interest in a family housing project consisting of 300 units at Eielson Air Force Base, Alaska, which is being leased from a private entity by the Secretary under section 801 of the Military Construction Authorization Act for Fiscal Year 1984 (Public Law 98–115). The Secretary would be authorized to provide consideration for the project at an amount not to exceed fair market value, as determined by the Secretary.

The authorization provided by this provision is similar to the authorization provided to the Secretary to purchase 366 family housing units at Eielson Air Force Base, Alaska under section 2804 of the Military Construction Authorization Act for Fiscal Year 1999 (Public Law 105–261). The Air Force requires the family housing units to be obtained by both purchases to meet the total housing requirement for Eielson Air Force Base.

Subtitle D—Other Matters

Reorganization and technical improvement of codified laws applicable to real property of the Department of Defense (sec. 2881)

The committee recommends a provision that would amend sections 2663 and 2664 of title 10, United States Code, to consolidate and clarify authorities available for real property administration. This provision would also repeal sections 2672, 2672a, and 2676 of title 10, United States Code, that would be superceded as a result of the consolidations. This provision would also amend section 2661 of title 10, United States Code, to clarify the application of the section to the Pentagon Reservation.

Report on application of force protection and anti-terrorism standards to leased facilities (sec. 2882)

The committee recommends a provision that would require the Secretary of Defense to submit a report to the congressional defense committees no later than May 1, 2006, on the application of Department of Defense anti-terrorism/force protection (AT/FP) standards to all facilities leased by the Department of Defense, or leased by the General Services Administration (GSA) on the Department's behalf, that house more than 11 personnel in service to, or employed by the Department. The report would include:

- (1) a description of all facilities;
- (2) a threat and vulnerability assessment;
- (3) a description of actions to mitigate risk; and
- (4) a description and cost estimate of the actions to be carried out to meet force protection/anti-terrorism standards.

The committee is committed to ensuring that AT/FP standards applied to defense installations to protect military personnel should also be applied to leased facilities. The standards, set forth in Unified Facilities Criteria (UFC) 4–010–01, “DOD Minimum AT Stand-

ards for Buildings,” were established in October 2003 to provide a prescriptive set of design conditions in which all leased facilities were to be in full compliance by October 2009. No facilities currently leased by the Department or GSA, most of which are in highly urban areas, meet the AT/FP standards. Yet, as of this date, the Department has not released a plan or investment strategy required to achieve the goal.

The committee encourages the Department to work with leased facility owners to seek options in the management and upgrade of existing leased facilities that could mitigate risk to an acceptable level, while saving the Department the costs of the relocation of personnel.

Construction at Fort Buchanan, Puerto Rico, for Reserve components (sec. 2883)

The committee recommends a provision that would amend section 1507(b)(2) of the Floyd D. Spence National Defense Authorization Act for Fiscal Year 2001 (Public Law 106–398) to remove the restriction on construction of facilities for Reserve component or non-appropriated fund projects.

Authority to use Papago Park Military Reservation, Arizona, for general military purposes (sec. 2884)

The committee recommends a provision that would amend section 1 of the Act of April 7, 1930 (46 Stat. 142, chapter 107) to change the designation of land reserved for the State of Arizona. The Act of April 7, 1930, abolished the Papago Saguaro National Monument and reserved specific land for military purposes for use by the National Guard of the State of Arizona as a rifle range. This provision would designate the use of specific land as a military installation known as the Papago Park Military Reservation, thereby allowing the State of Arizona to incorporate other military requirements on the specific land.

One-year extension of Department of Defense laboratory revitalization program (sec. 2885)

The committee recommends a provision that would extend by one year the authorization provided by section 2891 of the Military Construction Authorization Act for Fiscal Year 2005 (division B of Public Law 108–375) for the Secretary of Defense to carry out a program for the revitalization of laboratories operated by the Department of Defense. This provision would provide for the expiration of the authority on September 30, 2006.

Initial authorization for this program was provided under section 2892 of the Military Construction Authorization Act for Fiscal Year 1996 (division B of Public Law 104–106). The authority for the program was extended and amended under section 2871 of the Military Construction Authorization Act for Fiscal Year 1999 (division B of Public Law 105–261) and resumed under section 2891 of the Military Construction Authorization Act for Fiscal Year 2005 (division B of Public Law 108–375).

The committee intends the extension of the revitalization program for defense laboratories to allow the Secretary of Defense to use the increased thresholds in section 2805 of title 10, United

States Code, to address unique revitalization requirements for defense laboratories which typically cost more than the revitalization of comparative-sized military facilities.

Sense of Congress on establishment of Bakers Creek memorial (sec. 2886)

The committee recommends a provision that would describe the circumstances surrounding the crash at Bakers Creek, Australia, of a U.S. B-17C aircraft transporting 6 crew members and 35 servicemen from Mackay, Australia, to Port Moresby, New Guinea, on June 14, 1943, and that would express the sense of the Congress that the Secretary of the Army may establish an appropriate marker, at a site to be chosen at the discretion of the Secretary, to commemorate the event and the military members who died in that tragedy.

Items of Special Interest

Report on host nation agreements for overseas installations

The President released the Integrated Global Presence and Basing Strategy (IGPBS) in August, 2004. Within the strategy a series of world-wide military installations, designated as forward operating sites and cooperative security locations, were identified as having an “enduring presence” to support both the permanent presence of U.S. military personnel and rotating units for training and regional operations. The Department of Defense provided a report to Congress on March 3, 2005, which provided an overview by location of the broad purpose, planned capability, estimates of U.S. military population, and general facility requirements needed by fiscal year 2011. The report noted that “requirements may change as discussions and negotiations with host nations mature and individual investment strategies are finalized.”

The Departments of Defense and State are now in the process of negotiating formal agreements with host nations to implement the strategy. The agreements will establish the status of U.S. forces, funding responsibilities, burden-sharing arrangements, and basing plans to include the number of U.S. military personnel to be stationed in the host country. Many of the sites will require a substantial investment of funds for new construction and infrastructure, either to be funded by the host nation, or by the United States, to meet the intent of the strategy.

To ensure a wise use of taxpayer dollars, the committee directs the Secretary of Defense to ensure host nation agreements for the status of forces, funding responsibilities, and basing plans are secured before including authorization of funds for military construction projects in future President’s budget requests or in future supplemental appropriations requests. In addition, the Secretary shall ensure that burden-sharing arrangements are pursued with host nations in order to minimize the impact on Department of Defense’s budgets for the support of mutual national security interests.

The committee also directs the Secretary to establish installation development master plans that will cover all facility and infrastructure requirements, total estimated costs, and anticipated funding

sources before expending funds for new construction and replacement of expeditionary facilities. These plans would serve as essential guides to ensure that priorities are developed with comprehensive designs that guide prudent investment decisions, and that preclude the waste of funds on facilities that do not address long-term military requirements. These base development master plans, and particularly the extent of permanent facilities for exclusive use by U.S. forces, must be established in close cooperation with host nations to avoid planning conflicts and to be able to address mutual requirements.

The committee directs the Secretary to submit to the Committee on Armed Services of the Senate not later than April 15, 2006, a report that includes the following information for overseas locations:

- (1) a description and status of all host nation agreements established, or in negotiation, for each installation identified in the IGPBS as a forward operating site or cooperative security locations that will have an enduring presence of U.S. military personnel;
- (2) a description of the base development master plan for each site or location to include a specific list of facility improvement or construction projects and costs to complete all known requirements to support the estimated U.S. military population; and
- (3) an estimate by site or location of the annual cost to operate and sustain the installation.

Training facilities for military operations in urban terrain

In the Senate report accompanying S.2514 (S. Rept. 107–151), the committee required a report by the Secretary of Defense that would establish the requirements within the Department of Defense for facilities that support training for military operations in urban terrain (MOUT).

The committee is aware that the Department study requested by the committee is ongoing. At the same time, requirements for new MOUT training capabilities, driven by lessons learned during Operation Iraqi Freedom, are increasing within each service. The services will continue to address MOUT requirements and expend resources independently with minimal coordination and cooperation until a comprehensive joint MOUT training plan and investment strategy are approved and implemented within the Department.

The committee is concerned that a critical opportunity to develop capabilities for joint training in urban operations is not effectively being pursued within the Department. Therefore, the committee directs the Department to complete the required study by November 1, 2005, and to establish a requirements baseline against which the capabilities within each service and across the Department can be measured. The committee expects the results of the study to be incorporated into fiscal year 2007 budget decisions.

Relocation of Reserve component military units at Lambert International Airport, St. Louis, Missouri

The committee is aware of current negotiations between the Secretary of the Air Force, the Secretary of the Navy, and the City of

St. Louis Airport Authority to support expansion of Lambert International Airport in St. Louis by relocating Reserve component military installations at the airport. The committee is concerned that the current location of the 131st Air National Guard Fighter Wing and a Navy Marine Corps Reserve Center (NMCRC) may impede safe operations of a new runway being constructed at the airport and the installation of navigational equipment required by the Federal Aviation Administration (FAA) for the new runway.

Therefore, the committee urges the Secretary of the Air Force and the Secretary of the Navy to complete negotiations with the airport authority that will result in an agreement to relocate the 131st Fighter Wing and the NMCRC at the expense of the airport authority before the new airport runway is completed in June 2006. The agreement should also address the issue of FAA access to the military installations prior to the completion of the relocation of the military units in order to install Instrument Landing System equipment, obstruction lights, and power cables for the new runway 29 CAT III approach.

DIVISION C—DEPARTMENT OF ENERGY NATIONAL SECURITY AUTHORIZATIONS AND OTHER AUTHORIZATIONS

TITLE XXXI—DEPARTMENT OF ENERGY NATIONAL SECURITY PROGRAMS

Overview

Title XXXI authorizes appropriations for atomic energy defense activities of the Department of Energy (DOE) for fiscal year 2006, including: the purchase, construction, and acquisition of plant and capital equipment; research and development; nuclear weapons; naval nuclear propulsion; environmental restoration and waste management; operating expenses; and other expenses necessary to carry out the purposes of the Department of Energy Organization Act (Public Law 95–91). This title authorizes appropriations in four categories, which include National Nuclear Security Administration (NNSA); defense environmental management; other defense activities; and defense nuclear waste disposal.

The budget request for atomic energy defense activities at DOE totaled \$16.4 billion, a 1.4 percent decrease below the fiscal year 2005 appropriated level. Of the total amount requested, \$9.4 billion is for NNSA, of which \$6.6 billion is for weapons activities, \$1.6 billion is for defense nuclear nonproliferation activities, \$786.0 million is for naval reactors, and \$343.9 million is for the Office of the Administrator; \$6.0 billion is for defense environmental management, of which \$5.2 billion is for defense site acceleration completion, and \$831.3 million is for defense environmental services; \$636.0 million is for other defense activities; \$351.4 million is for defense nuclear waste disposal; and \$12.0 million is for energy supply.

The committee recommends \$16.4 billion for atomic energy defense activities at DOE, the amount of the budget request. Of the amounts authorized for the NNSA, \$6.6 billion is for weapons activities, a decrease of \$39.8 million below the budget request; \$1.6 billion is for defense nuclear nonproliferation activities, the amount of the budget request; \$786.0 million is for naval reactors, the amount of the budget request; and \$343.9 million is for the Office of the Administrator, the amount of the budget request. The committee recommends \$6.2 billion for the defense environmental management activities, an increase of \$174.4 million above the budget request. Of the amounts authorized for defense environmental management, \$5.3 billion is for defense site acceleration completion, an increase of \$152.1 million above the budget request; and \$853.6 million is for defense environmental services, an increase of \$22.3 million above the budget request. The committee recommends \$563.4 million for other defense activities, a reduction of \$72.6 million below the budget request. The committee recommends \$301.4 million for defense nuclear waste disposal, a re-

duction of \$50.0 million below the budget request. The committee recommends no funds for energy supply, a reduction of \$12.0 million.

The following table summarizes the budget request and the authorizations:

Subtitle A—National Security Programs Authorizations**National Nuclear Security Administration (sec. 3101)**

The committee recommends a provision that would authorize a total of \$9.4 billion for the Department of Energy (DOE) in fiscal year 2006 for the National Nuclear Security Administration (NNSA) to carry out programs necessary to national security.

Weapons activities

The committee recommends \$6.6 billion for weapons activities, a \$39.8 million reduction below the amount requested in fiscal year 2006. The committee authorizes the following activities: \$1.4 billion for directed stockpile work; \$2.1 billion for campaigns; \$1.7 billion for readiness in the technical base; \$216.1 million for secure transportation asset; \$740.5 million for safeguards and security; and \$313.5 million for facilities and infrastructure. The budget request included \$174.4 million for environmental projects and operations. The committee recommends no funds for these activities within the NNSA.

Directed stockpile work

The committee recommends \$1.4 billion for directed stockpile work, the amount of the budget request. The directed stockpile account supports work directly related to weapons in the stockpile, including day-to-day maintenance as well as research, development, engineering, and certification activities to support planned life extension programs. This account also includes fabrication and assembly of weapons components, feasibility studies, weapons dismantlement and disposal, training, and support equipment.

Campaigns

The committee recommends \$2.1 billion for campaigns, the amount of the budget request. The campaigns focus on science and engineering efforts involving the three weapons laboratories, the Nevada Test Site, and the weapons plants. Each campaign is focused on a specific activity to support and maintain the nuclear stockpile without underground nuclear weapons testing. These efforts maintain and enhance the safety, security, and reliability of the existing stockpile. The campaigns are divided into three major categories: science campaigns, readiness campaigns, and engineering campaigns.

Readiness in the technical base

The committee recommends \$1.7 billion in readiness in the technical base and facilities (RTBF), a \$68.6 million increase above the budget request. This account funds facilities and infrastructure in the weapons complex to ensure the operational readiness of the complex and includes construction funding for new facilities.

The \$68.6 million increase in RTBF should be used to limit any additional deferred maintenance. This amount includes \$20.0 million for fire safety and air handling systems, capital equipment upgrades, and infrastructure improvements at the Kansas City Plant, which plays a critical role in the warhead life extension programs by producing and supporting the non-nuclear components of nu-

clear warheads. Additionally, this amount includes \$12.0 million to accelerate design of the Uranium Processing Facility at the Y-12 National Security Complex of which \$5.0 million is included in project 06-D-140 and \$25.6 million for operations of facilities for maintenance projects, equipment replacements, and the upgrade of production bays at the Pantex Plant of which \$5.6 million is included in project 05-D-401.

Secure transportation asset

The committee recommends \$216.1 million for the secure transportation asset, a \$4.0 million increase above the budget request. The secure transportation asset is responsible for transportation of nuclear weapons, weapons materials and components, and other materials requiring safe and secure transport.

The committee notes that demand for secure transportation assets has continued to grow in recent years as sites have identified special nuclear material (SNM) excess to program needs and consolidated the storage of these materials in fewer locations. These actions can improve the security posture of DOE sites. The committee encourages DOE to continue to identify opportunities and accelerate the consolidation of SNM storage at its sites, where appropriate.

Safeguards and security

The committee recommends \$740.5 million for weapons safeguards and security, a \$32.0 million increase above the budget request. This amount includes \$20.0 million for security upgrades at the Y-12 National Security Complex and \$12.0 million for security upgrades at the Pantex Plant.

The committee notes that DOE has increased the amount of funding for safeguards and security in the Future Years Nuclear Security Program (FYNSP) in response to the concern raised by the committee last year; however, the committee remains concerned about the pace of DOE efforts to respond to current postulated threats. Further, DOE has not responded aggressively to this committee's direction from last year to invest in force multiplying construction and technologies to help increase security capabilities. The committee has recommended additional funds within the Office of Security and Safety Performance Assessment to accelerate the demonstration and deployment of security technology at DOE nuclear sites.

Facilities and infrastructure

The committee recommends \$313.5 million for the Facilities and Infrastructure Recapitalization Program (FIRP), a \$30.0 million increase above the budget request and the same as the amount appropriated in fiscal year 2005. The additional funding provided should be used to complete projects on the approved FIRP integrated project list, including deferred maintenance on heating, ventilating and air conditioning systems at the Y-12 National Security Complex and at Sandia National Laboratories; deferred maintenance and electrical system deficiencies at the Pantex Plant and at Los Alamos National Laboratory; and for electrical substation equipment at the Nevada Test Site.

The FIRP program will sunset in the year 2011. The FYNSP provided with the budget request projects a 30 percent reduction in FIRP funding below the fiscal year 2005 FYNSP. The committee does not expect that DOE can meet the FIRP program objective of elimination of certain deferred maintenance under the new FYNSP. The committee directs DOE to reevaluate FIRP funding and to submit with the fiscal year 2007 budget request a FYNSP sufficient to meet program goals by the program sunset date.

Defense Nuclear Nonproliferation Program

The committee recommends \$1.6 billion for the Defense Nuclear Nonproliferation Program, the amount of the budget request. The NNSA has management and oversight responsibilities for the nonproliferation programs of the Defense Nuclear Nonproliferation Program. The committee recommends funding for these programs, as follows: \$358.2 million for nonproliferation and verification research and development, an increase of \$86.0 million above the budget request; \$80.2 million for nonproliferation and international security; \$363.4 million for international nuclear materials protection and cooperation, an increase of \$20.0 million above the budget request; \$37.9 million for global initiatives for proliferation prevention; \$20.5 million for highly-enriched uranium transparency implementation; \$212.0 million for elimination of weapons-grade plutonium production, an increase of \$80.0 million above the budget request; \$453.1 million for fissile materials disposition, a decrease of \$200.0 million below the budget request; and \$112.0 million for the Global Threat Reduction Initiative, an increase of \$14.0 million above the budget request.

The committee notes that continued delays in the commencement of construction activities under the fissile materials disposition program make it unlikely that the DOE will be able to fully obligate the budget request for that program in fiscal year 2006. The committee remains concerned by the delays in the fissile materials disposition program, as well as in several other cooperative nonproliferation programs with Russia, as a result of a dispute between the United States and Russia over what liability standards should apply to the work under the programs. Continued delays in the fissile materials disposition program have significant domestic, as well as international, ramifications because work at the U.S. MOX Fuel Fabrication Facility is being delayed to ensure parallelism with the Russian program. The committee fully supports the goals of the MOX program and urges the administration to give this matter sustained high-level attention with the aim of resolving the dispute as quickly as possible so that reasonable liability standards are established that will be protective of U.S. interests and will allow the program to proceed. However, the committee does not support the use of program funds for site preparation or equipment procurement for the Russian MOX facility until an agreement on liability has been reached.

The committee believes that the nonproliferation and verification research and development program is supporting valuable basic and applied research in radiation detection that would benefit from the additional resources the committee recommends authorizing for this program. The committee notes the creation of the Domestic

Nuclear Detection Office in the Department of Homeland Security and underscores the importance of properly coordinating the work of that office with the long-standing efforts and technical expertise resident in the DOE in this critical area. The committee further understands that the DOE will retain responsibility for the implementation of international nonproliferation programs involving the deployment of radiation detection equipment overseas.

The committee recommends authorizing additional resources for the elimination of weapons-grade plutonium production program to accelerate the construction of a fossil-fuel power plant at Zheleznogorsk in order to meet the goal of shutting down the Zheleznogorsk plutonium-producing nuclear reactor by 2011.

The committee recommends authorizing additional resources for the international nuclear materials protection and cooperation program to accelerate security upgrades at Russian Strategic Rocket Forces sites, at Russian 12th Main Directorate sites as they become available for safety upgrades, and to accelerate the installation of equipment at additional Megaports.

The committee recommends authorizing additional resources for the Global Threat Reduction Initiative to accelerate the conversion of domestic research reactors so that they are fueled with low-enriched uranium-fuel rather than highly-enriched uranium-fuel, which poses a higher proliferation risk.

Naval Reactors

The committee recommends \$786.0 million for Naval Reactors, the amount of the budget request.

Office of Administrator

The committee recommends \$343.9 million for program direction for the NNSA, the amount of the budget request. This account includes program direction funding for all elements of NNSA, except for the Naval Reactors Program and the Secure Transportation Asset.

Environmental Projects and Operations

The budget request included \$174.4 million for environmental projects and operations. The committee recommends no funds for these activities within the NNSA. Congress established the NNSA under title 32 of the National Defense Authorization Act for Fiscal Year 2000 (Public Law 106–65) to separate the defense activities of DOE from its other disparate missions such as energy research, operation of the federal power marketing administrations, and cleanup of the Cold War environmental legacy. The environmental management program exists for the express purpose of addressing the Cold War environmental legacy at DOE sites. Under the Act, the Secretary of Energy may transfer any environmental remediation and waste management activity at NNSA nuclear weapons production facilities or at NNSA national security laboratories from the NNSA to another element of DOE. In providing this authority, Congress recognized the possibility that DOE may encounter the need to migrate a particular facility, program, or activity out of the NNSA should it evolve principally into an environmental cleanup activity. This provision allows such activity only to be transferred

out of the NNSA. In proposing the transfer of environmental management activities into the NNSA, the budget request does not comply with the Act. The committee has authorized the activities requested under environmental projects and operations within defense environmental management, where they are currently conducted and where they appropriately reside.

Reliable replacement warhead

The committee recommends \$9.4 million to continue the reliable replacement warhead (RRW), the amount of the budget request. The committee understands from the testimony of the Administrator of the National Nuclear Security Administration (NNSA) that the goals of this program are: (1) to increase the security and reliability of the nuclear weapons stockpile; (2) to develop replacement components for nuclear warheads that can be more easily manufactured with more readily available and more environmentally benign materials; (3) to develop replacements that can be introduced into the stockpile with assured high confidence regarding their effect on warhead safety and reliability; (4) to develop these replacements on a schedule that would reduce the possibility that the United States would ever be faced with the need to conduct a nuclear test in order to diagnose or remedy a reliability problem in the current stockpile; (5) to reduce infrastructure costs needed to support the stockpile, while increasing the responsiveness of that infrastructure; and (6) to increase confidence in the stockpile to a level such that significant, additional reductions in numbers of non-deployed “hedge” warheads can be made.

The committee supports these goals and this modest investment in feasibility studies, as described in the NNSA testimony before the Subcommittee on Strategic Forces of the Committee on Armed Services, with the goal of substantially increasing the safety, security, and reliability of the nuclear weapons stockpile and with the ultimate objective of achieving the smallest stockpile consistent with our nation’s security. The Administrator of the NNSA shall submit to the congressional defense committees, no later than February 6, 2006, a report describing the activities undertaken or planned for any RRW funding in fiscal years 2005, 2006, and 2007.

Robust nuclear earth penetrator

The committee recommends \$4.0 million for the robust nuclear earth penetrator (RNEP), the amount of the budget request. Funding is provided to prepare and execute the sled track impact test at Sandia National Laboratories on the feasibility of case hardening and target penetration. The committee has received testimony from the Secretary of Defense and the Commander, U.S. Strategic Command, on the continued proliferation of hard and deeply buried targets and the resulting military utility of completing the RNEP feasibility study.

The committee notes that section 3117 of the National Defense Authorization Act for Fiscal Year 2004 (Public Law 108-136) prohibits the Secretary of Energy from commencing the engineering development phase (Phase 6.3) of the nuclear weapons development process, or any subsequent phase, of a robust nuclear earth pene-

trator unless specifically authorized by Congress. The funding requested is for Phase 6.2 feasibility study only.

The committee has not included the \$4.5 million requested within the Air Force budget for the development of logistics, integration, and hardware requirements for carriage of the RNEP on the B-2 aircraft. The committee does not believe that these activities are necessary to evaluate the feasibility of RNEP.

Defense environmental management (sec. 3102)

The committee recommends a provision that would authorize a total of \$6.2 billion for the Department of Energy (DOE) in fiscal year 2006 for environmental management (EM) activities, a \$174.4 million increase above the budget request. This amount includes \$174.4 million for the activities proposed to be funded as environmental projects and operations within the National Nuclear Security Administration (NNSA). The National Defense Authorization Act of 2000 (Public Law 106-65), which established the NNSA, did not grant the Secretary of Energy authority to transfer environmental remediation and waste management activities into the NNSA. The committee does not support the transfer into the NNSA of legacy environmental liabilities from weapons production during the Cold War. The defense environmental management program exists to accomplish the express purpose of addressing this legacy.

Defense site acceleration completion

The committee recommends \$5.3 billion for defense site acceleration completion, an increase of \$152.1 million above the budget request. The committee authorizes the following activities: \$1.0 billion for 2006 accelerated completions, an increase of \$30.5 million above the budget request; \$2.0 billion for 2012 accelerated completions, an increase of \$41.7 million above the budget request; \$2.0 billion for 2035 accelerated completions, an increase of \$79.9 million above the budget request; \$287.2 million for safeguards and security, the amount of the budget request; and \$21.4 million for technology development and deployment, the amount of the budget request. The committee does not support the requested transfer of environmental management activities into the NNSA, and has provided authorization for these activities in the accelerated completion accounts under which they are currently funded.

The committee is concerned with the pace at which sites under the EM program are adopting the measures necessary to come into compliance with the new design basis threat. The committee encourages DOE to evaluate promptly all EM sites currently storing nuclear materials excess to mission needs and to execute plans to move excess materials to consolidated, more highly secure storage locations.

Defense environmental services

The committee recommends \$853.6 million for defense environmental services, an increase of \$22.3 million above the budget request. The committee authorizes the following activities: \$87.4 million for non-closure environmental activities, the amount of the budget request; \$66.4 million for community and regulatory support, an increase of \$4.4 million above the budget request; \$451.0

million for the federal contribution to the uranium enrichment decontamination and decommissioning fund, the amount of the budget request; and \$248.8 million for program direction, an increase of \$17.9 million above the budget request. The committee does not support the requested transfer of environmental management activities into the NNSA, and has provided authorization for these activities in the environmental services accounts under which they are currently funded.

Other defense activities (sec. 3103)

The committee recommends a provision that would authorize \$563.4 million for the Department of Energy (DOE) for other defense activities, \$72.6 million below the budget request.

Security and Safety Performance Assurance

The committee recommends \$316.1 million for security and safety performance assurance, an increase of \$15.0 million above the budget request. This increase provides an additional \$15.0 million for security technology deployment to mitigate security weaknesses, to evaluate how technology may be used to reduce security costs, and to adapt technology for physical security applications where current technologies are inadequate to meet DOE requirements. The committee encourages DOE to use a portion of these additional funds for the demonstration and field testing of promising security technologies.

The committee notes that security costs have increased rapidly as DOE implements needed security upgrades to protect its facilities against the design basis threat issued by DOE in 2004. The committee is concerned that DOE is relying disproportionately on increasing the number of armed security personnel at each site to defeat the new threats. The committee encourages DOE to adopt state-of-the-art approaches to guard those targets at greatest risk, including the use of technology and innovative deployment strategies for protective forces.

The Office of Security and Safety Performance Assurance has conducted site assistance visits to review security strategies at each DOE site. The committee urges DOE to develop a set of effective and cost-efficient strategies for protecting against the new design basis threat based on these site visits and to promulgate these strategies as security guidance throughout the DOE.

Environment, Safety and Health

The committee recommends \$77.0 million for environment, safety and health, the amount of the budget request.

Office of Legacy Management

The committee recommends \$45.1 million for the Office of Legacy Management, the amount of the budget request.

Nuclear Energy

The committee recommends \$123.9 million for nuclear energy, the amount of the budget request.

Defense Related Administrative Support

The budget request included \$87.6 million for national security programs administrative support. The committee recommends no funds for these activities. The committee views these administrative support activities as inherently part of the nondefense activities. The committee does not support the use of Atomic Energy Defense funds for nondefense activities.

Office of Hearings and Appeals

The committee recommends \$4.4 million for the Office of Hearings and Appeals, the amount of the budget request.

Energy security and assurance

The budget request included \$12.0 million for energy security and assurance and program direction within the Office of Electric Transmission and Distribution. The Department of Energy continues to request funds for efforts to secure the civilian electricity distribution system as an Atomic Energy Defense activity. The committee does not support this categorization. These responsibilities constitute a coordinated function between the Departments of Energy and Homeland Security related to the civilian energy infrastructure. The committee recommends no funds for these activities. The committee does not support using Atomic Energy Defense funds for nondefense activities.

Defense nuclear waste disposal (sec. 3104)

The committee recommends a provision that would authorize \$301.4 million for defense nuclear waste disposal, a decrease of \$50.0 million below the budget request but \$72.3 million above the amount appropriated in fiscal year 2005. The committee notes that the budget request for defense nuclear waste disposal increased by 270 percent between the fiscal year 2005 and fiscal year 2006 budget requests. Given the long duration of the development period for the geologic repository, the committee encourages the Department of Energy to reduce the volatility of the funding amount requested for defense nuclear waste disposal from year to year.

Subtitle B—Other Matters

Report on compliance with design basis threat (sec. 3105)

The committee recommends a provision that requires the Secretary of Energy, not later than 180 days after the enactment of this Act, to submit to the congressional defense committees a report describing plans for upgrading the security posture of the Department of Energy (DOE) and National Nuclear Security Administration (NNSA) in response to the design basis threat (DBT) issued by the Secretary of Energy in October 2004. The report shall include implementation plans and funding required to achieve compliance with the design basis threat by September 30, 2007, at DOE and NNSA sites, which contain nuclear weapons or special nuclear material. The report shall also include an evaluation of technologies and force deployment strategies to improve security efficiency and effectiveness against threats postulated in the DBT.

The committee is concerned with the pace of security enhancements at DOE and NNSA sites in the face of threats assessed by the intelligence community since the attacks of September 11, 2001. While both DOE and NNSA have undertaken commendable near-term efforts to hire additional security personnel and reinforce operational security, longer-term efforts to harden facilities physically and to apply security technology have lagged. The Secretary of Energy testified before the committee that full protection against the DBT will not be achieved before 2008. The committee encourages DOE to accelerate the achievement of compliance at those sites containing assets of gravest concern—nuclear weapons and special nuclear material.

Cost estimate for Waste Treatment and Immobilization Plant project, Hanford Site, Richland, Washington (sec. 3106)

The committee is aware of significant design changes being made at the Waste Treatment Plant (WTP) at the Hanford site near Richland, Washington, due in part to increased understanding of seismic criteria for the facility. The committee is concerned that the approach to this project—one where design and construction take place concurrently—may lead to significant cost escalation. Prior to the most recent design changes, the total estimated project cost for the WTP was approximately \$6.0 billion.

The committee understands that the Department of Energy has tasked the U.S. Army Corps of Engineers to update its prior cost estimate of the WTP. The committee directs that this effort by the Corps of Engineers be expanded to include the development of a full independent cost estimate of the Waste Treatment and Immobilization Plant project. The committee directs that the independent cost estimate shall include the total cost to complete the project and annual funding required to complete the project, enumerated by year. The independent cost estimate shall include the total and annual costs to complete the project for a project completion date in each of the following years: 2011, 2012, 2013, 2014, and 2015. The Secretary of Energy shall provide this new cost estimate to the congressional defense committees no later than March 1, 2006.

Report on international border security programs (sec. 3107)

The committee recommends a provision that would require the Secretary of Energy, in consultation with the Secretaries of Defense, State and, as appropriate, Homeland Security, to submit a report to the Committees on Armed Services of the Senate and the House of Representatives within 120 days after enactment of this Act on the management of border security programs in the countries of the former Soviet Union and in other countries. The report would include: (1) a description of the roles and responsibilities of each U.S. department and agency in international border security programs; (2) a description of the interactions and coordination among U.S. departments and agencies that are conducting international border security programs; (3) a description of the mechanisms that exist to ensure coordination, avoid duplication, and pro-

vide a means to resolve conflicts or problems that might arise in the implementation of international border security programs; (4) a discussion of whether there is existing interagency guidance that addresses the roles, interactions, and dispute resolution mechanisms for departments and agencies of the U.S. government that are conducting international border security programs, and the adequacy of such guidance if it exists; and (5) recommendations to improve the coordination and effectiveness of international border security programs.

The committee notes that a January 2005 report of the Government Accountability Office (GAO) entitled “Weapons of Mass Destruction: Nonproliferation Needs Better Integration” identified a strong need for government-wide guidance to delineate the roles, interactions, and responsibilities of agencies—in particular, the Departments of Energy, Defense, and State—in managing international border security programs.

The committee further notes that a March 2005 GAO report entitled “Preventing Nuclear Smuggling: DOE has made limited progress in installing radiation detection equipment at highest priority foreign seaports” recommends that the Department of Energy (DOE) develop a comprehensive long-term plan for the Megaports program that would identify criteria for deciding how many and which lower priority ports to complete if DOE continues to have difficulties initiating work at its highest priority ports, and that DOE reevaluate the per port cost estimates and adjust long-term cost projections as necessary. The committee understands that DOE has revised its port priority model and has begun work on the comprehensive plan recommended by the GAO. The Megaports program, the largest border security program of the Department of Energy, is a key program to be included in the report required by this provision.

Items of Special Interest

National security implications of the Rare Isotope Accelerator

The committee is aware that the Rare Isotope Accelerator (RIA) is a high priority civilian science facility under study by the Department of Energy Office of Science. The committee understands that RIA would allow precise measurements of nuclear physics phenomena through the development of beams of isotopes that are 10 to 100 times more powerful than those available today and in many cases not available at all. The committee believes such research into the fundamental structure of matter may have possible utility in the analysis of nuclear weapons physics.

The committee directs the Secretary of Energy to report to the congressional defense committees no later than 90 days after enactment of this Act on the potential utility, if any, of data from the RIA on issues concerning national security and on any duplication between the potential capability of the RIA and any capabilities being developed with atomic energy defense funds.

Role of the Kansas City Plant

The committee is aware that the Kansas City Plant continues to play an important role in the nuclear weapons activities of the National Nuclear Security Administration (NNSA). The mission of the Kansas City Plant is the procurement, production, and life-cycle support of the non-nuclear components of nuclear warheads. To perform this mission, the Kansas City Plant provides precision manufacturing, packaging of specialty mechanisms and microelectronics, specialty materials, and leading-edge technologies like high speed optical electronic telemetry systems. The Kansas City Plant provides an array of mission essential products and services in one secure environment, and continues to receive outstanding performance ratings from NNSA in the fulfillment of its award fee contract.

**TITLE XXXII—DEFENSE NUCLEAR FACILITIES SAFETY
BOARD**

Authorization (sec. 3201)

The committee recommends a provision that would authorize \$22.0 million for the Defense Nuclear Facilities Safety Board, the amount of the budget request.

TITLE XXXIII—NATIONAL DEFENSE STOCKPILE

Revisions to required receipt objectives for previously authorized disposals from the National Defense Stockpile (sec. 3301)

The committee recommends a provision that would revise authorizations for disposal of current inventories of excess and obsolete material in the National Defense Stockpile.

LEGISLATIVE REQUIREMENTS

Departmental Recommendations

By letter dated April 7, 2005, the General Counsel of the Department of Defense forwarded to the President of the Senate proposed legislation “To authorize appropriations for fiscal year 2006 for military activities of the Department of Defense, to prescribe military personnel strengths for fiscal year 2006, and for other purposes.” The transmittal letter and proposed legislation were officially referred as Executive Communication 1578 to the Committee on Armed Services on April 7, 2005.

Executive Communication 1578 is available for review at the committee.

Committee Action

The Committee ordered reported a comprehensive original bill and a series of original bills for the Department of Defense, military construction and Department of Energy authorizations by voice vote.

There were no rollcall votes on amendments to the bill.

Congressional Budget Office Cost Estimate

It was not possible to include the Congressional Budget Office cost estimate on this legislation because it was not available at the time the report was filed. It will be included in material presented during floor debate on the legislation.

Regulatory Impact

Paragraph 11(b) of rule XXVI of the Standing Rules of the Senate requires that a report on the regulatory impact of the bill be included in the report on the bill. The committee finds that there is no regulatory impact in the case of the National Defense Authorization Bill for Fiscal Year 2006.

Changes in Existing Law

Pursuant to the provisions of paragraph 12 of rule XXVI of the Standing Rules of the Senate, the changes in existing law made by

certain portions of the bill have not been shown in this section of the report because, in the opinion of the committee, it is necessary to dispense with showing such changes in order to expedite the business of the Senate and reduce the expenditure of funds.
